Nokia Data Center Fabric Fundamentals Exam Sample Questions (Q23-Q28):

NEW QUESTION # 23

Which of the following statements about the data center's leaf-spine topology (Clos network) is FALSE?

- A. It uses ECMP to distribute traffic across duplicate links.
- **B. It uses the spanning tree protocol to avoid forwarding loops.**
- C. Each leaf router is connected to all the spine routers in the cluster.
- D. It provides a consistent path for east-west traffic.

Answer: B

Explanation:

The leaf-spine (Clos) topology does not use the spanning tree protocol because it relies on equal-cost multipath (ECMP) routing to prevent loops and efficiently utilize all available paths. Spanning tree is typically avoided in modern data center fabrics to enable full bandwidth utilization.

NEW QUESTION # 24

- B. Monitor the data center fabric using model-driven telemetry.
- C. Use the digital sandbox to test and validate configuration changes and upgrades.
- **D. Use a fabric intent to build and validate design templates.**

Answer: D

Explanation:

Using a fabric intent to build and validate design templates is primarily a Day 0 or Day 1 activity focused on initial fabric deployment and design, not part of Day 2+ operational tasks like monitoring, health analysis, or change validation.

- **D. Uses Nokia's Fabric Services System to deploy the digital sandbox automatically**

Answer: D

The ZTP autoboot process does not automatically use Nokia's Fabric Services System to deploy the digital sandbox; it focuses on network boot, DHCP IP assignment, and downloading/executing provisioning scripts from web or FTP servers.
