

Reliable ADA-C01 Exam Simulations & New ADA-C01 Exam Online

P.S. Free 2025 Snowflake ADA-C01 dumps are available on Google Drive shared by Pass4SureQuiz:
<https://drive.google.com/open?id=1ZN4EmLFUHKD10Ik5ilfQQvOS7SrBRCY>

They struggle to find the right platform to get actual SnowPro Advanced Administrator (ADA-C01) exam questions and achieve their goals. Pass4SureQuiz has made the product after seeing the students struggle to solve their issues and help them pass the ADA-C01 certification exam on the first try. Pass4SureQuiz has designed this ADA-C01 Practice Test material after consulting with a lot of professionals and getting their good reviews so our customers can clear ADA-C01 certification exam quickly and improve themselves.

Snowflake ADA-C01 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Snowflake Security, Role-Based Access Control (RBAC), and User Administration• Disaster Recovery, Backup, and Data Replication
Topic 2	<ul style="list-style-type: none">• Manage and implement data sharing• Given a set of business requirements, establish access control architecture

Topic 3	<ul style="list-style-type: none"> • Implement and manage data governance in Snowflake • Data Sharing, Data Exchange, and Snowflake Marketplace
Topic 4	<ul style="list-style-type: none"> • Given a scenario, manage databases, tables, and views • Manage organizations and access control
Topic 5	<ul style="list-style-type: none"> • Given a scenario, configure access controls • Set up and manage security administration and authorization
Topic 6	<ul style="list-style-type: none"> • Interpret and make recommendations for data clustering • Manage DML locking and concurrency in Snowflake
Topic 7	<ul style="list-style-type: none"> • Set up and manage network and private connectivity • Given a scenario, manage Snowflake Time Travel and Fail-safe

New ADA-C01 Exam Online - Exam ADA-C01 Consultant

Are you planning to crack the Snowflake SnowPro Advanced Administrator ADA-C01 certification test in a short time and don't know how to prepare for it? Pass4SureQuiz has updated ADA-C01 Dumps questions for the applicants who want to prepare for the Snowflake ADA-C01 Certification test successfully within a few days. This study material is available in three different formats that you can trust to crack the Snowflake ADA-C01 certification test with ease.

Snowflake SnowPro Advanced Administrator Sample Questions (Q27-Q32):

NEW QUESTION # 27

Which commands can be performed by a user with the ORGADMIN role but not the ACCOUNTADMIN role? (Select TWO).

- A. SHOW ORGANIZATION ACCOUNTS;
- B. SELECT SYSTEM\$GLOBAL_ACCOUNT_SET_PARAMETER ('ACCOUNT LOCATOR', 'ENABLE ACCOUNT DATABASE_REPLICATION', 'true');
- C. SHOW REGIONS;
- D. SHOW USERS;
- E. GRANT ROLE ORGADMIN TO USER <username>;

Answer: A,B

Explanation:

Explanation

According to the Snowflake documentation¹, the ORGADMIN role is a special system role that is responsible for managing operations at the organization level, such as creating and viewing accounts, enabling database replication, and setting global account parameters. The ACCOUNTADMIN role is a system role that is responsible for managing operations at the account level, such as creating and managing users, roles, warehouses, databases, and shares. Therefore, the commands that can be performed by the ORGADMIN role but not the ACCOUNTADMIN role are:

*SHOW ORGANIZATION ACCOUNTS: This command lists all the accounts in the organization and their properties, such as region, edition, and status². The ACCOUNTADMIN role can only show the current account and its properties using the SHOW ACCOUNTS command³.

*SELECT SYSTEM\$GLOBAL_ACCOUNT_SET_PARAMETER: This function sets a global account parameter for an account in the organization, such as enabling account database replication⁴. The ACCOUNTADMIN role can only set local account parameters using the ALTER ACCOUNT command.

Option A is incorrect because the SHOW REGIONS command can be executed by any role, not just the ORGADMIN role.

Option B is incorrect because the SHOW USERS command can be executed by the ACCOUNTADMIN role, as well as any role that has been granted the MONITOR privilege on the account.

Option D is incorrect because the GRANT ROLE ORGADMIN TO USER <username> command can be executed by the ACCOUNTADMIN role, as well as any role that has been granted the ORGADMIN role1.

NEW QUESTION # 28

A Snowflake organization MYORG consists of two Snowflake accounts:

Account Name	Snowflake Region	Snowflake Edition
ACCOUNT1	AWS_EU_WEST_2	ENTERPRISE
ACCOUNT2	AZURE_WESTEUROPE	STANDARD

The ACCOUNT1 has a database PROD_DB and the ORGADMIN role enabled.

Management wants to have the PROD_DB database replicated to ACCOUNT2.

Are there any necessary configuration steps in ACCOUNT1 before the database replication can be configured and initiated in ACCOUNT2?

- A. USE ROLE ORGADMIN;
SELECT SYSTEM\$GLOBAL_ACCOUNT_SET_PARAMETER ('MYORG. ACCOUNT1',
'ENABLE_ACCOUNT_DATABASE_REPLICATION', 'TRUE');
USE ROLE ACCOUNTADMIN;
ALTER DATABASE PROD_DB ENABLE REPLICATION TO ACCOUNTS MYORG. ACCOUNT2
IGNORE EDITION CHECK;
- B. No configuration steps are necessary in ACCOUNT1. Replicating databases across accounts within the same Snowflake organization is enabled by default.
- C. It is not possible to replicate a database from an Enterprise edition Snowflake account to a Standard edition Snowflake account.
- D. USE ROLE ORGADMIN;
SELECT SYSTEM\$GLOBAL_ACCOUNT_SET_PARAMETER ('MYORG. ACCOUNT1',
'ENABLE_ACCOUNT_DATABASE_REPLICATION', 'TRUE');
SELECT SYSTEM\$GLOBAL_ACCOUNT_SET_PARAMETER ('MYORG. ACCOUNT2',
'ENABLE_ACCOUNT_DATABASE_REPLICATION', 'TRUE');
USE ROLE ACCOUNTADMIN;
ALTER DATABASE PROD_DB ENABLE REPLICATION TO ACCOUNTS MYORG. ACCOUNT2;

Answer: A

Explanation:

Explanation

According to the Snowflake documentation1, database replication across accounts within the same organization requires the following steps:

*Link the accounts in the organization using the ORGADMIN role.

*Enable account database replication for both the source and target accounts using the SYSTEM\$GLOBAL_ACCOUNT_SET_PARAMETER function.

*Promote a local database to serve as the primary database and enable replication to the target accounts using the ALTER DATABASE ... ENABLE REPLICATION TO ACCOUNTS command.

*Create a secondary database in the target account using the CREATE DATABASE ... FROM SHARE command.

*Refresh the secondary database periodically using the ALTER DATABASE ... REFRESH command.

Option A is incorrect because it does not include the step of creating a secondary database in the target account. Option C is incorrect because replicating databases across accounts within the same organization is not enabled by default, but requires enabling account database replication for both the source and target accounts. Option D is incorrect because it is possible to replicate a database from an Enterprise edition Snowflake account to a Standard edition Snowflake account, as long as the IGNORE EDITION CHECK option is used in the ALTER DATABASE ... ENABLE REPLICATION TO ACCOUNTS command2. Option B is correct because it includes all the necessary configuration steps in ACCOUNT1, except for creating a secondary database in ACCOUNT2, which can be done after the replication is enabled.

NEW QUESTION # 29

What are characteristics of data replication in Snowflake? (Select THREE).

- A. Databases created from shares can be replicated.

- B. Users must be granted REPLICATIONADMIN privileges in order to enable replication.
- C. Replication can only occur within the same cloud provider.
- D. To start replication run the ALTER DATABASE ... REFRESH command on the account where the secondary database resides.
- E. The ALTER DATABASE ... ENABLE REPLICATION TO ACCOUNTS command must be issued from the primary account.
- F. Users can have unlimited primary databases and they can be replicated to an unlimited number of accounts if all accounts are within the same organization.

Answer: A,E,F

Explanation:

- * Option A is correct because the ALTER DATABASE ... ENABLE REPLICATION TO ACCOUNTS command must be issued from the primary account that owns the database to be replicated¹.
- * Option B is incorrect because users must be granted REPLICATIONGRANTER privileges in order to enable replication¹.
- * Option C is incorrect because to start replication, the ALTER DATABASE ... REFRESH command must be run on the primary database, not the secondary database¹.
- * Option D is incorrect because replication can occur across different cloud providers, as well as across regions².
- * Option E is correct because databases created from shares can be replicated, as long as the share is active and the database is not dropped or altered¹.
- * Option F is correct because users can have unlimited primary databases and they can be replicated to an unlimited number of accounts if all accounts are within the same organization¹.

NEW QUESTION # 30

Which commands can be performed by a user with the ORGADMIN role but not the ACCOUNTADMIN role? (Select TWO).

- A. SHOW ORGANIZATION ACCOUNTS;
- B. SHOW REGIONS;
- C. SHOW USERS;
- D. SELECT SYSTEM\$GLOBAL_ACCOUNT_SET_PARAMETER (
- E. GRANT ROLE ORGADMIN TO USER <username>;

Answer: A,D

Explanation:

```
'ACCOUNT LOCATOR',
'ENABLE ACCOUNT DATABASE_REPLICATION',
'true'
);
```

Explanation:

According to the Snowflake documentation¹, the ORGADMIN role is a special system role that is responsible for managing operations at the organization level, such as creating and viewing accounts, enabling database replication, and setting global account parameters. The ACCOUNTADMIN role is a system role that is responsible for managing operations at the account level, such as creating and managing users, roles, warehouses, databases, and shares. Therefore, the commands that can be performed by the ORGADMIN role but not the ACCOUNTADMIN role are:

* SHOW ORGANIZATION ACCOUNTS: This command lists all the accounts in the organization and their properties, such as region, edition, and status². The ACCOUNTADMIN role can only show the current account and its properties using the SHOW ACCOUNTS command³.

* SELECT SYSTEM\$GLOBAL_ACCOUNT_SET_PARAMETER: This function sets a global account parameter for an account in the organization, such as enabling account database replication⁴. The ACCOUNTADMIN role can only set local account parameters using the ALTER ACCOUNT command.

Option A is incorrect because the SHOW REGIONS command can be executed by any role, not just the ORGADMIN role.

Option B is incorrect because the SHOW USERS command can be executed by the ACCOUNTADMIN role, as well as any role that has been granted the MONITOR privilege on the account. Option D is incorrect because the GRANT ROLE ORGADMIN TO USER <username> command can be executed by the ACCOUNTADMIN role, as well as any role that has been granted the ORGADMIN role¹.

NEW QUESTION # 31

Which function is the role SECURITYADMIN responsible for that is not granted to role USERADMIN?

- A. Create new users
- **B. Manage system grants**
- C. Create new roles
- D. Reset a Snowflake user's password

Answer: B

Explanation:

Explanation

According to the Snowflake documentation¹, the SECURITYADMIN role is responsible for managing all grants on objects in the account, including system grants. The USERADMIN role can only create and manage users and roles, but not grant privileges on other objects. Therefore, the function that is unique to the SECURITYADMIN role is to manage system grants. Option A is incorrect because both roles can reset a user's password. Option C is incorrect because both roles can create new users. Option D is incorrect because both roles can create new roles.

NEW QUESTION # 32

.....

Getting the SnowPro Advanced Administrator (ADA-C01) certification will highly expand your expertise. To achieve the ADA-C01 certification you need to prepare well. ADA-C01 exam dumps are a great way to assess your skills and abilities. ADA-C01 Questions can help you identify your strengths and weaknesses and better understand what you're good at. You should take a ADA-C01 Practice Exam to prepare for the SnowPro Advanced Administrator (ADA-C01) certification exam. With ADA-C01 exam preparation software, you can practice your skills and improve your performance.
