

# Reliable Analytics-Arch-201 Test Labs, Interactive Analytics-Arch-201 Practice Exam

The Analytics-Arch-201 PDF file contains the real, valid, and updated Salesforce Analytics-Arch-201 exam practice questions. These are the real Analytics-Arch-201 exam questions that surely will appear in the upcoming exam and by preparing with them you can easily pass the final exam. The Analytics-Arch-201 PDF Questions file is easy to use and install. You can use the Analytics-Arch-201 PDF practice questions on your laptop, desktop, tabs, or even on your smartphone and start Salesforce exam preparation right now.

## Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• <b>Deploy Tableau Server:</b> This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• <b>Monitor and Maintain a Tableau Deployment:</b> This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• <b>Design a Tableau Infrastructure:</b> This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.</li></ul>

## 201 Test Questions Fee

For candidates who are going to buying the Analytics-Arch-201 exam dumps online, you may concern more about the personal information. If you choose us, your personal information will be protected well. Once you buy Analytics-Arch-201 exam materials of us, we will send the downloading link to you automatically, and you can start your training immediately. Once the order finish, your personal information such as your name and your email address will be concealed. In addition, Analytics-Arch-201 Exam Dumps provide you with free update for 365 days, namely you can get the latest information about the exam.

### Salesforce Certified Tableau Architect Sample Questions (Q175-Q180):

#### NEW QUESTION # 175

A multinational company is implementing Tableau Cloud and requires a secure method to manage user access across different regions, adhering to various data privacy regulations. What is the most appropriate authentication strategy?

- A. Integration with a centralized identity management system that complies with regional data privacy laws
- B. Randomized password generation for each user session
- C. Region-specific local authentication for each group of users
- D. Universal access with a single shared login for all users

**Answer: A**

Explanation:

Integration with a centralized identity management system that complies with regional data privacy laws This strategy ensures secure and compliant user access management across different regions by leveraging a centralized system that is designed to meet various data privacy regulations. Option A is incorrect because a single shared login lacks security and does not comply with regional data privacy laws. Option B is incorrect as region-specific local authentication can lead to fragmented and inconsistent access control. Option D is incorrect because randomized password generation for each session, while secure, is impractical and user-unfriendly.

#### NEW QUESTION # 176

In the context of deploying Tableau Server with an external repository, what is a key factor to consider for ensuring optimal performance of the server?

- A. Ensure the network connection between Tableau Server and the external repository has low latency
- B. The external repository must be located on the same physical server as the Tableau Server
- C. The external repository should be configured with a higher storage capacity than the Tableau Server
- D. Synchronization frequency between the Tableau Server and the external repository should be minimized

**Answer: A**

Explanation:

Ensure the network connection between Tableau Server and the external repository has low latency A low-latency network connection is vital for optimal performance when Tableau Server is integrated with an external repository. This facilitates faster data retrieval and improves overall responsiveness, which is crucial for efficient data analysis and reporting. Option A is incorrect because it is not necessary for the external repository to be on the same physical server; what matters more is the network connection quality. Option B is incorrect as having higher storage capacity does not directly impact the performance of the server in relation to the external repository. Option C is incorrect because synchronization frequency is typically managed to balance performance and data freshness, and minimizing it is not always the optimal approach.

#### NEW QUESTION # 177

After performing load testing on Tableau Server, you observe a significant increase in response times during peak user activity. What is the most appropriate action based on this result?

- A. Reduce the number of concurrent users allowed on the server to decrease load
- B. Ignore the results as temporary spikes in response times are normal during peak periods
- C. Analyze server configurations and optimize performance settings before considering hardware upgrades
- D. Immediately add more hardware resources, such as RAM and CPU, to the server

**Answer: C**

Explanation:

Analyze server configurations and optimize performance settings before considering hardware upgrades. Upon observing increased response times during peak activity in load testing, the appropriate initial action is to analyze and optimize server configurations and performance settings. This approach involves reviewing settings such as cache, parallelism, and other performance-related configurations that could impact response times, offering a potentially more cost-effective solution than immediate hardware upgrades. Option A is incorrect because adding hardware resources should be considered only after ensuring that the server configurations are fully optimized. Option C is incorrect as reducing the number of concurrent users may not address the underlying performance issues and could negatively impact user experience. Option D is incorrect because ignoring the results can lead to ongoing performance issues, adversely affecting user satisfaction and server reliability.

#### NEW QUESTION # 178

A company is transitioning from an on-premises Tableau Server to Tableau Cloud. Which strategy should be prioritized to ensure a smooth migration?

- **A. Perform a thorough audit of current dashboards and data sources for compatibility with Tableau Cloud**
- B. Prioritize the migration of the least used dashboards to test the Tableau Cloud environment
- C. Migrate all data and dashboards at once to minimize the transition period
- D. Discontinue the use of Tableau Server immediately to force a quick transition

**Answer: A**

Explanation:

Perform a thorough audit of current dashboards and data sources for compatibility with Tableau Cloud. Conducting an audit of dashboards and data sources ensures compatibility with Tableau Cloud, which is crucial for a smooth migration without data loss or functionality issues. Option A is incorrect because migrating everything at once can overwhelm the system and lead to significant disruptions. Option C is incorrect as prioritizing the least used dashboards might not address the migration challenges of more critical dashboards and data. Option D is incorrect because discontinuing Tableau Server immediately can disrupt business operations and does not allow for a phased and controlled transition.

#### NEW QUESTION # 179

When conducting a resource analysis to identify performance bottlenecks in Tableau Server, which metric is most critical to examine?

- A. The version of the Tableau Server software and its compatibility with the operating system
- B. The total disk space used by Tableau Server data extracts
- **C. The CPU and memory utilization of the Tableau Server during peak usage times**
- D. The number of user licenses utilized on the Tableau Server

**Answer: C**

Explanation:

The CPU and memory utilization of the Tableau Server during peak usage times. When performing a resource analysis to identify performance bottlenecks, it is essential to examine the CPU and memory utilization of Tableau Server, especially during peak usage times. High utilization of these resources can indicate that the server is under strain and may be the cause of performance issues. Understanding these metrics helps in pinpointing the need for resource scaling or optimization. Option A is incorrect because while disk space used by data extracts is important, it does not directly indicate CPU and memory bottlenecks. Option C is incorrect as the number of user licenses utilized does not directly affect the server's resource utilization. Option D is incorrect because while software version and compatibility are important, they are not directly related to real-time resource utilization and performance bottlenecks.

#### NEW QUESTION # 180

.....

We also offer a free demo version that gives you a golden opportunity to evaluate the reliability of the Salesforce Certified Tableau Architect (Analytics-Arch-201) exam study material before purchasing. Vigorous practice is the only way to ace the Salesforce Certified Tableau Architect (Analytics-Arch-201) test on the first try. And that is what Pass4guide Salesforce Analytics-Arch-201 practice material does. Each format of updated Salesforce Analytics-Arch-201 preparation material excels in its way and helps you

pass the Salesforce Certified Tableau Architect (Analytics-Arch-201) examination on the first attempt.
