## AWS-Solutions-Architect-Associate Interactive EBook | Dumps AWS-Solutions-Architect-Associate Download

Knowledge of the AWS-Solutions-Architect-Associate real study dumps contains are very comprehensive, not only have the function of online learning, also can help the user to leak fill a vacancy, let those who deal with qualification exam users can easily and efficient use of the AWS-Solutions-Architect-Associate question guide. By visit our website, the user can obtain an experimental demonstration, free after the user experience can choose the most appropriate and most favorite AWS-Solutions-Architect-Associate Exam Questions download. Users can not only learn new knowledge, can also apply theory into the actual problem, but also can leak fill a vacancy, can say such case selection is to meet, so to grasp the opportunity!

## Difficulty in Writing AWS Solutions Associate

This examination can not be instantly finished because the **AMAZON AWS SOLUTIONS ASSOCIATE exam dumps** are needed to pass the examinations. These exam dumps require time and correct and up to date content to pass the exam with effectiveness. Several applicants are doubtful about the nature of questions posed in the exam and the complexity of exam questions and the time needed to finish the questions before writing a credential AWS Accredited Developer Professional certification. The most suitable way to pass the Professional Test is to question and prepare with AWS Solutions associate- Associate PROFESSIONAL exam dumps. AWS Accredited Developer Applicants are assessing their education and finding places for change in the real review style. The most solid way is to practice the Professional Credential Review with an AWS Certified

Developer, as the examination is an important part of the AWS Certified Developer.

## Amazon AWS Certified Solutions Architect - Associate (SAA-C02) Sample Questions (Q50-Q55):

### NEW QUESTION # 50

An application server needs to be in a private subnet without access to the Internet.

The solution must retrieve and upload files to an Amazon S3 bucket.

How should a Solutions Architect design a solution to meet these requirements?

- **A. Use Amazon S3 VPC endpoints**
- B. Use a NAT Gateway
- C. Use a private Amazon S3 bucket
- D. Deploy a proxy server

**Answer: A**

Explanation:

Explanation

<https://aws.amazon.com/blogs/aws/new-vpc-endpoint-for-amazon-s3/>

### NEW QUESTION # 51

A company is building an ecommerce web application on AWS. The application sends information about new orders to an Amazon API Gateway REST API to process. The company wants to ensure that orders are processed in the order that they are received.

Which solution will meet these requirements?

- A. Use an API Gateway authorizer to block any requests while the application processes an order.
- B. Use an API Gateway integration to send a message to an Amazon Simple Queue Service (Amazon SQS) FIFO queue when the application receives an order. Configure the SQS FIFO queue to invoke an AWS Lambda function for processing.
- C. Use an API Gateway integration to send a message to an Amazon Simple Queue Service (Amazon SQS) standard queue when the application receives an order. Configure the SQS standard queue to invoke an AWS Lambda function for processing.
- **D. Use an API Gateway integration to publish a message to an Amazon Simple Notification Service (Amazon SNS) topic when the application receives an order. Subscribe an AWS Lambda function to the topic to perform processing.**

**Answer: D**

### NEW QUESTION # 52

A company has an application that uses Amazon Elastic File System (Amazon EFS) to store data. The files are 1 GB in size or larger and are accessed often only for the first few days after creation. The application data is shared across a cluster of Linux servers. The company wants to reduce storage costs for the application.

What should a solutions architect do to meet these requirements?

- A. Move the files to Amazon S3 with S3 Lifecycle policies enabled. Rewrite the application to support mounting the S3 bucket
- B. Move the files from Amazon EFS and store them locally on each Amazon EC2 instance
- C. Implement Amazon FSx and mount the network drive on each server
- **D. Configure a lifecycle policy to move the files to the EFS Infrequent Access (IA) storage class after 7 days.**

**Answer: D**

### NEW QUESTION # 53

A company must re-evaluate its need for the Amazon EC2 instances it currently has provisioned in an Auto Scaling group. At present, the Auto Scaling group is configured for minimum of two instances and a maximum of four instances across two Availability zones. A Solutions architect reviewed Amazon CloudWatch metrics and found that CPU utilization is consistently low for the EC2 instances.

What should the solutions architect recommend to maximize utilization while ensuring the application remains fault tolerant?

- A. Create a new launch configuration that uses smaller instance types. Update the existing Auto Scaling group.
- B. Increase the Amazon Elastic Block Store (Amazon EBS) capacity of instances with less CPU utilization.
- C. Modify the Auto Scaling group scaling policy to scale in and out based on a higher CPU utilization metric.
- D. Remove some EC2 instances to increase the utilization of remaining instances.

**Answer: A**

#### NEW QUESTION # 54

A company runs a web application in a single AWS Region. A solutions architect wants to ensure that the web application can continue to operate if the application becomes unavailable in the Region.

Which solution will meet this requirement?

- A. Deploy the application in multiple Availability Zones within a single Region. Use an Amazon Route 53 latency record in each Availability Zone to route traffic to a healthy Availability Zone.
- B. Deploy the application in multiple Regions. Use an Amazon Route 53 simple routing record to route traffic to a healthy Region.
- C. Deploy the application in multiple Availability Zones within a single Region. Use Amazon Route 53 DNS health checks to route traffic to healthy application resources.
- D. Deploy the application in multiple Regions. Use Amazon Route 53 DNS health checks to route traffic to a healthy Region.

**Answer: D**

Explanation:

To protect against a Regional failure, the application must be deployed in multiple Regions. Amazon Route 53 DNS failover with health checks allows traffic to be automatically routed to a healthy Region when the primary becomes unavailable, meeting high availability and disaster recovery requirements.
