

# Reliable C-BW4H-2505 Exam Book - C-BW4H-2505 Real Exam

P.S. Free & New C-BW4H-2505 dumps are available on Google Drive shared by PassReview: <https://drive.google.com/open?id=1nQtq5ASKkFD2W3kp8iNKKH9SfaPi6Jw8>

PassReview also provides easy to use C-BW4H-2505 practice test brain dump preparation software for C-BW4H-2505. Moreover, after the date of purchase of the C-BW4H-2505 testing engine, you will receive free updates for 90 days. The C-BW4H-2505 dumps practice test software is easy to install and has a simple interface. The practice test software for C-BW4H-2505 Exam provides a real feel of an exam and allows you to test your skills for the exam. The C-BW4H-2505 software comes with multiple features including the self-assessment feature. You will get free updates for 90 days after the purchase date that will allow you to get latest and well-curated questions for the C-BW4H-2505 exam.

## SAP C-BW4H-2505 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Data Acquisition into SAP HANA: This section evaluates the capacity of SAP Consultants to integrate various data sources into SAP HANA. It assesses their ability to understand different ingestion techniques and ensure data accessibility for processing.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>• SAP BW</li> <li>• 4HANA Project and the Modeling Process: This section of the exam assesses how Data Engineers guide and contribute to SAP BW</li> <li>• 4HANA projects. It includes knowledge of modeling workflows, project lifecycle stages, and collaboration strategies within project teams.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• Native SAP HANA Modeling: This section evaluates the ability of SAP Consultants to describe and apply native modeling options in SAP HANA. It emphasizes understanding how to build optimized data structures directly within the HANA platform.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Data Acquisition into SAP BW</li> <li>• 4HANA: This section tests how Data Engineers manage data integration into SAP BW</li> <li>• 4HANA from multiple sources. It covers essential knowledge of tools and processes used for data extraction, transformation, and loading into the SAP environment.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• SAP BW</li> <li>• 4HANA Modeling: This section targets the skills of Data Engineers in selecting appropriate modeling options and applying best practices like LSA++ within SAP BW</li> <li>• 4HANA. It focuses on designing scalable, high-performing data models.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>• InfoObjects and InfoProviders: This section tests the knowledge of Data Engineers in working with InfoObjects and InfoProviders in SAP BW</li> <li>• 4HANA. It involves handling data structures used for organizing, storing, and accessing analytical data.</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>• SAP BW Query Design: This section of the exam assesses the ability of Data Engineers to create and run queries using SAP BW</li> <li>• 4HANA. It evaluates how well candidates can work with query components to retrieve and structure data effectively for reporting and analysis.</li> </ul>
Topic 8	<ul style="list-style-type: none"> <li>• SAP BW</li> <li>• 4HANA Data Flow: This section of the exam measures the practical ability of SAP Consultants to load data within the SAP BW</li> <li>• 4HANA environment. It assesses familiarity with data movement and transformation processes across different layers of the system</li> </ul>
Topic 9	<ul style="list-style-type: none"> <li>• SAP Analytics Tools and SAP Analytics Cloud: This section evaluates the skills of SAP Consultants in using tools like SAP Analytics Cloud, Lumira, and Analysis for Office to visualize and interpret data. It focuses on the consultant's ability to apply business intelligence tools within the SAP ecosystem.</li> </ul>

## Reliable C-BW4H-2505 Exam Book Exam Latest Release | Updated SAP C-BW4H-2505 Real Exam

Only 20-30 hours are needed for you to learn and prepare our C-BW4H-2505 test questions for the exam and you will save your time and energy. No matter you are the students or the in-service staff you are busy in your school learning, your jobs or other important things and can't spare much time to learn. But you buy our C-BW4H-2505 Exam Materials you will save your time and energy and focus your attention mainly on your most important thing. And you can master the most important C-BW4H-2505 exam torrent in the shortest time and finally pass the C-BW4H-2505 exam successfully with our excellent C-BW4H-2505 learning prep.

### SAP Certified Associate - Data Engineer - SAP BW/4HANA Sample Questions (Q75-Q80):

#### NEW QUESTION # 75

You create an SAP HANA HDI Calculation View. What are some of the reasons to choose the data category Cube with Star Join instead of data category Dimension? Note: There are 3 correct answers to this question.

- A. You can aggregate measures as a sum.
- B. You can provide default time characteristics.
- C. You can persist transactional data.
- D. You can combine master data transactional data.
- E. You can create restricted columns.

**Answer: A,C,D**

#### **NEW QUESTION # 76**

What does a CompositeProvider allow you to do in SAP BW/4HANA? Note: There are 3 correct answers to this question.

- A. Define new restricted key figures
- B. Integrate SAP HANA calculation views
- C. Join two ABAP CDS views
- D. Combine InfoProviders using Joins and Unions
- E. Create new calculated fields

**Answer: A,D,E**

#### **NEW QUESTION # 77**

Which layer of the layered scalable architecture (LSA++) of SAP BW/4HANA is designed as the main storage for harmonized consistent data?

- A. Virtual Data Mart layer
- B. Data Acquisition layer
- C. Flexible Enterprise Data Warehouse Core layer
- D. Open Operational Data Store layer

**Answer: C**

#### **NEW QUESTION # 78**

How can the delta merge process be initiated in SAP BW/4HANA? Note: There are 2 correct answers to this question.

- A. By setting a specific flag in the transformation
- B. By setting a specific flag in the data transfer process
- C. By using a specific process type in a process chain
- D. By using the SAP BW/4HANA data load monitor

**Answer: B,C**

#### **NEW QUESTION # 79**

You have an existing field-based data flow that follows the layered scalable architecture (LSA++) concept. To meet a new urgent business requirement for field you want to leverage a hierarchy of an existing characteristic without changing the transformation. How can you achieve this? Note: There are 2 correct answers to this question.

- A. Associate the field with the characteristic in the CompositeProvider
- B. Associate the field with the characteristic in the Open ODS View
- C. Assign hierarchy properties to the field in the BW Query
- D. Add the characteristic to the DataStore object (advanced)

**Answer: A,C**

Explanation:

To meet a new urgent business requirement for leveraging an existing characteristic's hierarchy without changing the transformation, you can achieve this by using specific features of SAP BW/4HANA. Below is a detailed explanation of how each option works and why the verified answers are correct.

\* **Field-Based Data Flow:** Field-based data flows in SAP BW/4HANA allow you to process data at the field level rather than the entire record. This approach provides flexibility in handling specific fields independently.

\* **Hierarchy in SAP BW/4HANA:** Hierarchies in SAP BW/4HANA are used to organize master data into structured levels (e.g., organizational hierarchies like departments or product categories). They enable advanced reporting capabilities, such as drill-downs and roll-ups.

\* **Layered Scalable Architecture (LSA++):** LSA++ is a modern data warehousing architecture that simplifies data modeling and ensures scalability. It includes layers like the Open ODS View, DataStore Object (advanced), and CompositeProvider, which play specific roles in data processing and reporting.

\* **Transformation Independence:** The requirement specifies that the transformation should not be changed.

This means you need to leverage existing objects and configurations without modifying the underlying data flow logic.

**Key Concepts:**

\* **Why Correct?** In SAP BW/4HANA, hierarchies can be directly assigned to fields in a BW Query. This allows you to use the hierarchy of an existing characteristic without altering the transformation or data flow. By assigning hierarchy properties in the query, you enable hierarchical reporting capabilities (e.g., drill-downs) for the field.

\* **How It Works:**

\* Navigate to the BW Query Designer.

\* Select the field that corresponds to the characteristic.

\* Assign the hierarchy properties to the field, enabling hierarchical navigation in reports.

\* **Advantages:**

\* No changes to the underlying data flow or transformation.

\* Quick implementation since it leverages existing query capabilities.

\* **Why Incorrect?** Adding the characteristic to the DataStore object (advanced) would require modifying the data flow and transformation, which violates the requirement to avoid changes to the transformation. This approach is not suitable for meeting the urgent business requirement without impacting the existing setup.

\* **Why Incorrect?** Associating the field with the characteristic in the Open ODS View would also involve changes to the data flow or transformation. Since the Open ODS View is part of the data acquisition layer, any modification here would impact the upstream data flow, which is not allowed in this scenario.

\* **Why Correct?** A CompositeProvider in SAP BW/4HANA combines data from multiple sources (e.g., DataStore Objects, InfoProviders) into a single logical view. You can associate the field with the characteristic in the CompositeProvider without modifying the transformation. This allows you to leverage the hierarchy of the existing characteristic for reporting purposes.

\* **How It Works:**

\* Navigate to the CompositeProvider configuration.

\* Map the field to the characteristic that has the required hierarchy.

\* Use the CompositeProvider in your queries to enable hierarchical reporting.

\* **Advantages:**

\* No changes to the transformation or data flow.

\* Leverages the existing CompositeProvider structure for flexibility.

**Verified Answer Explanation:** Option A: Assign hierarchy properties to the field in the BW Query

Option B: Add the characteristic to the DataStore object (advanced)

Option C: Associate the field with the characteristic in the Open ODS View

Option D: Associate the field with the characteristic in the CompositeProvider

\* **SAP BW/4HANA Modeling Guide:** The guide explains how to assign hierarchy properties in BW Queries and associate fields with characteristics in CompositeProviders. It emphasizes the importance of leveraging these features without modifying transformations.

\* **SAP Note 2700850:** This note highlights best practices for using hierarchies in SAP BW/4HANA and provides guidance on implementing them in queries and CompositeProviders.

\* **SAP Best Practices for BW/4HANA:** SAP recommends using BW Queries and CompositeProviders to meet urgent business requirements without altering the underlying data flow. These approaches ensure minimal disruption to existing processes.

**SAP Documentation and References:**

**Practical Implications:** When faced with urgent business requirements:

\* Use BW Queries to assign hierarchy properties to fields for quick implementation.

\* Leverage CompositeProviders to associate fields with characteristics without modifying transformations.

\* Avoid making changes to the DataStore object or Open ODS View unless absolutely necessary, as these changes can impact the entire data flow.

By following these practices, you can meet business needs efficiently while maintaining the integrity of your data architecture.
