

# Reliable C1000-173 Exam Tips, C1000-173 Clearer Explanation

The BootcampPDF is one of the leading platforms that have been offering valid, updated, and real IBM C1000-173 exam dumps for many years. The IBM Cloud Pak for Data v4.7 Architect C1000-173 practice test questions offered by the BootcampPDF are designed and verified by experienced IBM C1000-173 Certification Exam trainers. They work together and put all their expertise to ensure the top standard of IBM Cloud Pak for Data v4.7 Architect C1000-173 valid dumps.

## IBM C1000-173 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Security Requirements: This domain targets a Security Architect and focuses on planning security for a Cloud Pak for Data deployment. It includes managing certificates that secure communications, identity management systems, and access and authorization controls to enforce secure and compliant user and service interactions. The auditing features and their integration with enterprise audit systems are crucial to ensure traceability and accountability. Asset interchange security involves safeguarding data movement between services.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Architect with AI Series: This section measures the skills of an AI Solution Architect and includes designing architectures for solutions involving various IBM Watson AI services. Architecting with Watson Assistant involves creating conversational AI interfaces. Watson Discovery solutions focus on building cognitive search and content analytics applications. Watson Pipelines solutions involve orchestrating data science workflows. Watson OpenScale architectures enable AI model monitoring and governance. Architecting with Match 360 supports personalized engagement by integrating multi-channel customer insights.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Architect with Analytic Services: This domain targets a Data Analytics Architect and focuses on designing solutions using analytic components of Cloud Pak for Data. Architecting with DataStage involves creating data integration and ETL pipelines. Data Refinery architectures prepare and cleanse data for analysis. Db2 Big SQL solutions address querying large distributed data sets with SQL, facilitating analytics across diverse data sources.</li></ul>

## IBM C1000-173 Clearer Explanation & Training C1000-173 Pdf

Our C1000-173 training guide is not difficult for you. We have simplified all difficult knowledge. So you will enjoy learning our C1000-173 study quiz. During your practice of our C1000-173 exam materials, you will find that it is easy to make changes. In addition, our study materials will boost your confidence. You will be glad to witness your growth. Do not hesitate. Good opportunities will slip away if you stand still.

## IBM Cloud Pak for Data v4.7 Architect Sample Questions (Q164-Q169):

### NEW QUESTION # 164

Which two Cloud Pak for Data predefined roles are used to define DataStage access?

- A. Data Steward
- B. Business Analyst
- C. Reporting Administrator
- D. Governance Steward
- E. DataStage Developer

**Answer: A,E**

Explanation:

In IBM Cloud Pak for Data, DataStage access is managed using predefined roles that grant specific permissions. The DataStage Developer role is explicitly designed to allow users to create and manage DataStage flows. The Data Steward role is involved in managing data access, lineage, and metadata, which supports governance aspects within DataStage projects. Business Analyst and Governance Steward roles are focused on cataloging and governance workflows, not DataStage design or execution. Reporting Administrator is not applicable in this context.

### NEW QUESTION # 165

Why is it important to differentiate between Metro-DR and Regional-DR in disaster recovery planning?

- A. To complicate the recovery process
- B. To ensure inappropriate resource allocation
- C. To tailor the DR strategy to specific business needs and geographical risks
- D. To uniformly apply the same strategy across all locations

**Answer: C**

### NEW QUESTION # 166

What scenario best illustrates the effective use of Db2 Graph services?

- A. For basic CRUD operations without relationships
- B. Simple data aggregation without the need for graph theory
- C. When handling flat, tabular data
- D. Managing complex relationships and pattern recognition

**Answer: D**

### NEW QUESTION # 167

When planning to expose REST-based APIs for Db2, what is an essential consideration for the route configuration?

- A. Route hardcoding within the application
- B. Inconsistent route naming conventions
- C. Static route assignment
- D. Dynamic route adjustment based on traffic

**Answer: D**

### NEW QUESTION # 168

What must be created to enable the Cloud Pak for Data platform to use a company's custom CA certificate to validate certificates from internal servers?

- A. A configmap that contains the company's CA certificate.
- B. A secret containing a wildcard certificate for all internal servers.

- Answer: A**

Secrets are typically used for storing sensitive data like private keys and TLS certificates but are not used for adding trusted root CAs at the platform level. A ConfigMap is explicitly required by the platform to inject the CA trust into the certificate validation chain.
