Our online workers will solve your problem immediately after receiving your questions.

SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q43-Q48):

NEW QUESTION #43

In which type of extensibility is the SAP Business Technology Platform used to host a custom extension?

- A. Key user extensibility
- B. Developer extensibility
- C. Classic extensibility
- D. Side-by-side extensibility

Answer: D

NEW QUESTION #44

Which of the following would prevent SAP from running a Post-Upgrade Test (PUT) on a customer's behalf? Note: There are 2 correct answers to this question.

• A. An execution variant has not been maintained.

- B. The process steps have been reordered.
- C. Data marked for deletion is picked for execution.
- D. The test process failed the execution pre-check.

Answer: A,B

NEW QUESTION #45

Which of the following would prevent SAP from running a Post-Upgrade Test (PUT) on a customer's behalf? Note: There are 2 correct answers to this question.

- A. An execution variant has not been maintained.
- B. The process steps have been reordered.
- C. Data marked for deletion is picked for execution.
- D. The test process failed the execution pre-check.

Answer: A,D

Explanation:

The following would prevent SAP from running a Post-Upgrade Test (PUT) on a customer's behalf:

- * An execution variant has not been maintained: An execution variant is a set of test data that is used to execute a test process. It contains the input values and expected results for each test step. If an execution variant is not maintained for a test process, the system cannot run the test automatically and will skip it1.
- * The test process failed the execution pre-check: The execution pre-check is a validation that is performed before the test execution to ensure that the test process and the execution variant are consistent and complete. If the execution pre-check fails, it means that there are some issues or gaps in the test process or the execution variant that need to be resolved before the test can be run2. The following would not prevent SAP from running a Post-Upgrade Test (PUT) on a customer's behalf:
- * Data marked for deletion is picked for execution: Data marked for deletion is data that is no longer relevant or valid for the test process. It can be marked for deletion by the customer or by SAP. However, this does not affect the test execution, as the system will ignore the data marked for deletion and use the available data for the test process3.
- * The process steps have been reordered: The process steps are the individual actions that are performed as part of the test process. They can be reordered by the customer or by SAP to reflect the changes in the business process or the user interface. However, this does not affect the test execution, as the system will follow the order of the process steps as defined in the test process4.

NEW QUESTION #46

If you cannot find a prepackaged solution process that addresses integration requirements in SAP Signavio Process Navigator, where do you look next?

- A. SAP Cloud ALM
- B. SAP Discovery Center
- C. SAP Business Technology Platform
- D. SAP Business Accelerator Hub

Answer: D

NEW QUESTION #47

Which of the following systems are used to implement SAP S/4HANA Cloud Public Edition for a customer? Note: There are 3 correct answers to this question.

- A. Trial system
- B. Sandbox system
- C. Starter system
- D. Development system
- E. Test system

Answer: B,C,E

Explanation:

- * Sandbox system: This is an optional system that can be used to explore the SAP S/4HANA Cloud Public Edition capabilities and features before the implementation project starts. It is not connected to the starter system or the test system and does not have any data migration or configuration tools. It can be refreshed on demand by the customer1.
- * Starter system: This is the first system that is provisioned for the customer after the contract is signed.

 It is used to perform the fit-to-standard workshops, where the customer validates the standard processes and identifies the gaps and requirements. It also serves as the configuration system, where the customer configures the business processes using the SAP Central Business Configuration tool. The starter system is connected to the test system and can transfer the configuration and master data to it?
- * Test system: This is the second system that is provisioned for the customer after the starter system is configured. It is used to perform the integration testing, user acceptance testing, data migration, and cutover activities. It also serves as the production system, where the customer runs the live business processes after the go-live. The test system is connected to the starter system and can receive the configuration and master data from it3.

The systems that are not used to implement SAP S/4HANA Cloud Public Edition for a customer are:

- * Trial system: This is a system that can be used to experience the SAP S/4HANA Cloud Public Edition solution for a limited time. It is not connected to any other system and does not have any data migration or configuration tools. It is not part of the implementation project and does not require a contract4.
- * Development system: This is a system that can be used to develop custom applications or extensions using the SAP Business Technology Platform. It is not part of the SAP S/4HANA Cloud Public Edition landscape and does not have any data migration or configuration tools. It requires a separate contract and license.
