Valid CCFA-200b Test Sample | Reliable CCFA-200b Test Prep

The key trait of our product is that we keep pace with the changes of syllabus and the latest circumstance to revise and update our CCFA-200b study materials, and we are available for one-year free updating to assure you of the reliability of our service. Our company has established a long-term partnership with those who have purchased our CCFA-200b exam guides. We have made all efforts to update our product in order to help you deal with any change, making you confidently take part in the exam. We will inform you that the CCFA-200b Study Materials should be updated and send you the latest version in a year after your payment. We will also provide some discount for your updating after a year if you are satisfied with our CCFA-200b exam prepare.

CrowdStrike Falcon Administrator Sample Questions (Q16-Q21):

NEW QUESTION # 16

When configuring a specific prevention policy, the admin can align the policy to two different types of groups, Host Groups and which other?

- A. Operating System Groups
- B. Custom IOC Groups
- C. Enterprise Groups
- D. Custom IOA Rule Groups

Answer: D

Explanation:

Prevention Policies are created based on the OS (Windows, MAC and Linux policies). Once a prevention policy is created, three options appear on top: Settings, Assigned Host Groups and Assigned Custom IOAS (tested on CrowdStrike). Therefore, Host Groups and Custom IOAS are the two different types of groups a prevention policy can be aligned to.

NEW QUESTION # 17

Which of the following pages provides a count of sensors in Reduced Functionality Mode (RFM) by Operating System?

- A. Activity Overview
- B. Sensor Health
- C. Hosts Overview
- D. Support and resources

Answer: B

Explanation:

The page that provides a count of sensors in Reduced Functionality Mode (RFM) by Operating System is Sensor Health. The Sensor Health page allows you to view and monitor the health and status of all sensors in your environment. You can use this page to identify any sensors that have issues or errors, such as RFM, which is a mode that limits the sensor's functionality due to license expiration, network connectivity loss, or certificate validation failure. You can filter the sensors by operating system, sensor version, last seen date, health events, detections, and preventions.

NEW QUESTION # 18

What will happen to a host if it is not assigned a Sensor Update policy?

- A. The host will automatically update to the newest sensor version and auto-update to future release
- B. The host will uninstall the Sensor and provide an alert to the installation team
- C. The host will automatically create a custom Sensor Update policy
- D. The host will use the Default Sensor Update policy

Answer: D

Explanation:

The option that describes what will happen to a host if it is not assigned a Sensor Update policy is that the host will use the Default Sensor Update policy. A Sensor Update policy is a policy that controls how and when the Falcon sensor is updated on a host. You can create and assign custom Sensor Update policies to different hosts or groups in your environment. However, if a host is not assigned to a specific Sensor Update policy, it will inherit the settings from the Default Sensor Update policy. The Default Sensor Update policy is a "catch-all" policy that is enabled by default and has the "Uninstall and Maintenance Protection" feature turned on. You can modify the settings of the Default Sensor Update policy, but you cannot delete or disable it.

NEW QUESTION # 19

The Falcon sensor uses certificate pinning to defend against man-in-the-middle attacks. What must you ensure is disabled for the sensor to communicate with the CrowdStrike Cloud?

- A. Proxy information

- **B. Deep packet inspection**
- C. TCP inspection
- D. NMAP scanning

Answer: B

NEW QUESTION # 20

Which of the follow should be used with extreme caution because it may introduce additional security risks such as malware or other attacks which would not be recorded, detected, or prevented based on the exclusion syntax?

- A. IOC Exclusions
- **B. IOA Exclusions**
- C. Machine Learning Exclusions
- D. Sensor Visibility Exclusion

Answer: B

Explanation:

The option that should be used with extreme caution because it may introduce additional security risks such as malware or other attacks which would not be recorded, detected, or prevented based on the exclusion syntax is IOA Exclusions. An IOA (indicator of attack) exclusion allows you to define custom rules for excluding suspicious behavior from detection or prevention based on process execution, file write, network connection, or registry events. However, using IOA exclusions may reduce the visibility and protection of the Falcon sensor, as it may allow malicious activity to bypass the sensor's detection and prevention capabilities. Therefore, you should use IOA exclusions with extreme caution and only when necessary.

NEW QUESTION # 21

.....

For CrowdStrike aspirants wishing to clear the CrowdStrike test and become a CrowdStrike Falcon Administrator certification holder, Fast2test CrowdStrike CCFA-200b practice material is an excellent resource. By preparing with Fast2test actual CrowdStrike CCFA-200b Exam Questions, you can take get success on first attempt and take an important step toward accelerating your career.
