Reliable Docker DCA Exam Guide & Reliable DCA Exam Pattern

Through our investigation and analysis of the real problem over the years, our DCA prepare questions can accurately predict the annual DCA exams. In the actual exam process, users will encounter almost half of the problem is similar in our products. Even if the syllabus is changing every year, the DCA quiz guide's experts still have the ability to master propositional trends. Believe that such a high hit rate can better help users in the review process to build confidence, and finally help users through the qualification

examination to obtain a certificate. All in all, we want you to have the courage to challenge yourself, and our DCA Exam Prep will do the best for the user's expectations.

Docker Certified Associate (DCA) Exam Sample Questions (Q82-Q87):

NEW QUESTION # 82

Does this describe the role of Control Groups (cgroups) when used with a Docker container?

Solution: user authorization to the Docker API

- A. Yes
- **B. No**

Answer: B

Explanation:

= The role of Control Groups (cgroups) when used with a Docker container is not user authorization to the Docker API. Cgroups are a feature of the Linux kernel that allow you to limit the access processes and containers have to system resources such as CPU, RAM, IOPS and network¹. Cgroups enable Docker to share available hardware resources to containers and optionally enforce limits and constraints². User authorization to the Docker API is a different concept that involves granting permissions to users or groups to perform certain actions on the Docker daemon, such as creating, running, or stopping containers³.

References:

* Lab: Control Groups (cgroups) | dockerlabs

* Runtime metrics | Docker Docs

* Authorize users to access the Docker API | Docker Docs

I hope this helps you understand the role of cgroups and how they work with Docker containers. If you have any other questions related to Docker, please feel free to ask me.

NEW QUESTION # 83

Which of the following is NOT backed up when performing a Docker Trusted backup operation?

- A. Access control to repos and images
- B. Repository metadata
- **C. Image blobs**
- D. DTR configurations

Answer: C

NEW QUESTION # 84

The Kubernetes yaml shown below describes a networkPolicy.

```
apiVersion: networking.k8s.io/v1
kind: NetworkPolicy
metadata:
  name: dca
  namespace: default
spec:
  podSelector:
    matchLabels:
      tier: backend
  ingress:
    - from:
      - podSelector:
          matchLabels:
            tier: api
      ...
```

Will the networkPolicy BLOCK this traffic?

Solution. a request issued from a pod bearing the tier: backend label, to a pod bearing the tier: frontend label

- A. No
- **B. Yes**

Answer: B

Explanation:

The networkPolicy will block the traffic from a pod bearing the tier: backend label, to a pod bearing the tier: frontend label. The networkPolicy specifies that only pods with the tier: frontend label can access the pods with the app: guestbook-

api and tier: backend labels on port 801. Any other traffic to the backend pods will be denied by default². Therefore, a request issued from a pod bearing the tier: backend label, to a pod bearing the tier: frontend label will be blocked by the networkPolicy. References: Connect a Frontend to a Backend Using Services), Network Policies)

NEW QUESTION # 85

Seven managers are in a swarm cluster.

Is this how should they be distributed across three datacenters or availability zones?

Solution: 3-2-2

- A. Yes
- B. No

Answer: B

Explanation:

= Distributing seven managers across three datacenters or availability zones as 3-2-2 is not a good way to ensure high availability and fault tolerance. This is because a swarm cluster requires a majority of managers (more than half) to be available and able to communicate with each other in order to maintain the swarm state and avoid a split-brain scenario¹. If one of the datacenters or availability zones with three managers goes down, the remaining four managers will not have a quorum and the swarm will stop functioning. A better way to distribute seven managers across three datacenters or availability zones is 3-3-1 or 3-2-1-1, which will allow the swarm to survive the loss of one or two datacenters or availability zones, respectively². How to Create a Cluster of Docker Containers with Docker Swarm and DigitalOcean on Ubuntu 16.04 | DigitalOcean

NEW QUESTION # 86

A company's security policy specifies that development and production containers must run on separate nodes in a given Swarm cluster. Can this be used to schedule containers to meet the security policy requirements?

Solution. environment variables

- A. Yes
- B. No

Answer: B

Explanation:

Explanation

Environment variables cannot be used to schedule containers to meet the security policy requirements.

Environment variables are key-value pairs that can be passed to containers when they are created or run.

Environment variables can be used to configure the behavior of the containerized application or provide runtime information, such as database credentials, API keys, etc. Environment variables do not affect how containers are scheduled on nodes in a swarm mode cluster. References:

<https://docs.docker.com/engine/reference/commandline/run/#set-environment-variables-e-env-env-file>,

<https://docs.docker.com/engine/swarm/services/#create-a-service>

NEW QUESTION # 87

.....

DCA practice materials are highly popular in the market compared with other materials from competitors whether on the volume of sales or content as well. All precise information on the DCA exam questions and high accurate questions are helpful. To help you have a thorough understanding of our DCA training prep, free demos are provided for your reference. So sales and customer satisfaction improved dramatically. So we make great contribution both to line and customers greatly.
