An administrator is tasked to deploy two FortiGate devices in two different zones to achieve geographical redundancy. Which two architectural considerations must the administrator address? (Choose two.)

- A. The FortiGate devices must not be deployed in the same VPC.
- **B. The FortiGate devices must be deployed in two different regions.**
- **C. The FortiGate devices cannot be assigned the second IP address in the subnets that they are deployed in.**
- D. The FortiGate devices can be deployed in the same subnet.

**Answer: B,C**

- C. The HA cluster is deployed using the software-defined network (SDN) connector.
- D. Both cluster members are located in the same zone.

**Answer: A**

Explanation:

The debug output shows the internal route being updated and moved to the new next hop (172.16.1.3), indicating the health check and failover process successfully redirected internal traffic to the active HA node.

#### NEW QUESTION # 27

You are tasked with deploying a load balancer in Google Cloud that does not terminate sessions arriving from outside the VPC and that forwards traffic to the organization's internal web servers.

Which load balancer type should you deploy?

- A. Internal passthrough load balancer
- B. Proxy network load balancer
- C. External application load balancer
- D. External passthrough load balancer
