Two new dynamic firewall addresses have been configured on the FortiGate VM using the external connector to Integrate within the same Azure environment.

The debug output shows that one IP address can be resolved successfully, but the second is empty.

Which steps could you perform to correct the misconfiguration? (Choose all that apply.)

- A. Verify the Microsoft Entra ID role assignment access rights
- B. Check for a mistyped Microsof Entra ID subscription
- C. Verify the tags on the target VM
- D. Verify the NSG for the target VM
- E. Verify the filter used for the dynamic firewall address

Answer: C,E

Explanation:
The debug output shows that the UbuntuServer address object successfully resolved an IP, while the webServer did not. The most likely cause is a mismatch in the dynamic address filter or missing tags on the target VM.
Verify the filter used for the dynamic firewall address - The filter category=windows may not match any VM metadata, resulting in no matched addresses.
Verify the tags on the target VM - Ensure that the VM has the correct tags (e.g., category=windows) that match the dynamic address filter to enable resolution.
