Certification H12-821_V1.0 Exam Infor | New Soft H12-821_V1.0 Simulations

Our veteran professional generalize the most important points of questions easily tested in the H12-821_V1.0 practice exam into our practice questions. Their professional work-skill paid off after our H12-821_V1.0 training materials being acceptable by tens of thousands of exam candidates among the market. They have delicate perception of the H12-821_V1.0 study quiz over ten years. So they are dependable. You will have a big future as long as you choose us!

Huawei HCIP-Datcom-Core Technology V1.0 Sample Questions (Q932-Q937):

NEW QUESTION # 932

In IPv6, interface IDs can be manually configured, automatically generated by the system, or generated based on the IEEE EUI-64 standard.

- A. TRUE
- B. FALSE

Answer: A

Explanation:

Interface ID in IPv6:

The interface ID is the last 64 bits of an IPv6 address, and it uniquely identifies an interface within a subnet. It can be generated in three ways:

Manually Configured: Explicitly assigned by an administrator.

System-Generated: The operating system assigns a random or pseudo-random value.

EUI-64 Standard: Generated based on the MAC address of the interface.

NEW QUESTION # 933

Which statement about RIB and FIB is wrong?

- A. FIB directs the forwarding of packets
- **B. The next-hop in RIB is the IP address of the peer directly connected to the neighbor interface**
- C. RIB does not directly guide the forwarding of packets
- D. FIB is generated by RIB

Answer: B

NEW QUESTION # 934

When receiving a packet, a router matches the packet against ACL rules. The ACL matching result is either Matched or Unmatched. If the matching result is Unmatched, which of the following are possible causes?

- A. The packet matches an ACL rule with the deny action.
- **B. All rules are traversed but no matching rule is found.**
- **C. No ACL is configured on the device.**
- **D. An ACL is configured but it does not contain any rules.**

Answer: B,C,D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

* When a packet is checked against an Access Control List (ACL), it is processed based on rule matches.

* "Unmatched" scenarios occur if:

* A. TRUE # The packet does not match any ACL rule.

* C. TRUE # No ACL is configured, so there are no rules to match.

* D. TRUE # An empty ACL exists, meaning no rules are defined.

* B is incorrect because if the packet matches a deny rule, it is "matched" and explicitly dropped, not "unmatched".

Reference: Huawei HCIA-Datcom Study Guide, ACL Rule Matching and Processing Logic.

NEW QUESTION # 935

IPv6 defines multiple types of addresses.

Which of the following statements is false about these addresses?

- A. Link-local addresses can be quickly generated using the EUI-64 method.
- **B. Manually configured link-local addresses have a higher priority than automatically generated ones.**
- C. Each interface can have multiple global unicast addresses with different network prefixes.
- D. Anycast addresses can be used only as destination addresses.

Answer: B

Explanation:

IPv6 Address Behavior

Manually configured link-local addresses do not have a higher priority than automatically generated ones; they coexist and are equally preferred for local communication.

NEW QUESTION # 936

Which of the following OSPF areas can only reach other areas through the default route?

- A. Non-backbone area
- **B. totally stub area**

- C. NSSA
- D. Backbone area

Answer: B

NEW QUESTION # 937
