

Reliable JN0-105 Exam Topics - Exam JN0-105 Score

Is Certs4Future the Best Choice for JN0-105 Exam Preparation?

Introduction to the JN0-105 Exam

When you're prepping for a network certification like Juniper's JN0-105 (also known as the Juniper Networks Certified Associate - Junos), you don't want to gamble on low-quality resources. This is your ticket to getting recognized as a capable network professional, so preparation is key.

What is the JN0-105 Certification?

The [JN0-105 Exam Practice Test](#) is a foundational-level certification offered by Juniper Networks. It tests your knowledge of networking fundamentals, Junos OS basics, user interfaces, configuration basics, and routing fundamentals. It's basically your entry pass into Juniper's world of enterprise-level networking technologies.

Why is JN0-105 Valuable in IT Networking?

This cert holds serious weight in the IT world. It not only validates your skills but also sets you apart from the crowd. Employers recognize it as a sign of both technical aptitude and a serious attitude toward career development in networking.

DOWNLOAD the newest PracticeDump JN0-105 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=13aD5vg_CMfZsBoVbwISgoFWC27iTdHfR

It is widely accepted that where there is a will, there is a way; so to speak, a man who has a settled purpose will surely succeed. To obtain the JN0-105 certificate is a wonderful and rapid way to advance your position in your career. In order to reach this goal of passing the JN0-105 Exam, you need more external assistance to help yourself. With our JN0-105 exam questions, you will not only get aid to gain your dreaming certification, but also you can enjoy the first-class service online.

Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.
Topic 2	Junos OS Fundamentals: It covers concepts, benefits, and functionality of the core elements of the Junos OS.
Topic 3	User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.
Topic 4	Routing Fundamentals: This topic discusses pointing out basic routing concepts or functionality for Junos devices. Moreover, the topic also describes configuring or monitoring basic routing elements for a Junos device.

Quiz 2025 Juniper JN0-105: Junos, Associate (JNCIA-Junos) Latest Reliable Exam Topics

JN0-105 exam dumps have a higher pass rate than products in the same industry. If you want to pass JN0-105 certification, then it is necessary to choose a product with a high pass rate. Our study materials guarantee the pass rate from professional knowledge, services, and flexible plan settings. According to user needs, JN0-105 exam prep provides everything possible to ensure their success. The 99% pass rate is the proud result of our study materials. If you join, you will become one of the 99%. I believe that pass rate is also a big criterion for your choice of products, because your ultimate goal is to obtain JN0-105 Certification. In JN0-105 exam dumps, you can do it.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q97-Q102):

NEW QUESTION # 97

What will the request system configuration rescue save command do?

- A. It activates the rescue configuration.
- B. It saves the candidate configuration as the rescue configuration.
- **C. It saves the most recently committed configuration as the rescue configuration.**
- D. It saves a configuration version prior to the configuration most recently committed as the rescue configuration.

Answer: C

Explanation:

The request system configuration rescue save command in Junos OS saves the most recently committed configuration as the rescue configuration. This rescue configuration can be used to recover the device if future configurations cause issues. It ensures there is a stable, known-good configuration to fall back on, which is crucial in network management and troubleshooting.

Reference:

"rescue : save configurations as the rescue: request system configuration save(saves the current configs as a rescue configs)" from Useful Juniper Commands.txt.

Juniper official documentation: Configuring and Activating a Rescue Configuration.

NEW QUESTION # 98

Exhibit

```
user@router> show route 192.168.100.2
```

```
inet.0: 15 destinations, 17 routes (15 active, 0 holddown, 0 hidden) Limit/Threshold: 1048576/1048576 destinations
```

```
+ = Active Route, - = Last Active, * = Both 192.168.100.2/32*[OSPF/IO] 00:14:29, metric 1
```

```
> to 172.16.1.6 via ge-0/0/1.0 [BGP/170] 00:06:49, localpref 100
```

```
AS path: 65102 I, validation-state: unverified > to 172.16.1.6 via ge-0/0/1.0 Referring to the exhibit, which statement is correct?
```

- A. The BGP path is the only active route.
- **B. The OSPF path is the only active route.**
- C. / Traffic is load-balanced across two routes.
- D. The BGP route is preferred over the OSPF route.

Answer: B

Explanation:

Referring to the exhibit, the presence of the "+" symbol next to the OSPF route for 192.168.100.2/32 indicates that this is the active route being used to forward traffic. The BGP route, although present, does not have the "+" symbol, indicating it is not the active route. In Junos OS, the routing table displays the active route with a "+" symbol, and the fact that the OSPF route has this symbol means it is the preferred path based on the routing protocol's decision process, which takes into account factors such as route preference (administrative distance) and metrics.

NEW QUESTION # 99

Exhibit.

Referring to the exhibit, which routing configuration is required for these two users to access the remote server?

- A. Trunk ports must be enabled on the switch.
- **B. Users and the server require a default gateway.**
- C. A routing protocol must be enabled on the router.
- D. Users must connect directly to the router.

Answer: B

Explanation:

In a typical network configuration, users and servers require a default gateway to communicate with devices on different networks or subnets. The default gateway is usually the router's interface on the same network, which routes the traffic to other networks. This is essential for the two users to access the remote server if the server is on a different subnet, which is indicated by the different network addresses.

NEW QUESTION # 100

Which two statements are true about the PFE? (Choose two.)

- A. The PFE is responsible for performing protocol updates and system management.
- **B. The PFE implements various services such as policing, stateless firewall filtering, and class of service.**
- C. The PFE handles all processes that control the chassis components.
- **D. The PFE uses Layer 2 and Layer 3 forwarding tables to forward traffic toward its destination.**

Answer: B,D

Explanation:

The Packet Forwarding Engine (PFE) in Juniper Networks devices is the heart of the data plane, handling the actual forwarding of packets based on pre-computed forwarding tables. It provides several critical services to manage and control traffic flow, including policing (to enforce bandwidth limits for certain traffic types), stateless firewall filtering (to permit or deny traffic based on predefined criteria), and Class of Service (CoS) (to prioritize traffic to ensure quality of service for critical applications). The PFE utilizes both Layer 2 (MAC addresses) and Layer 3 (IP addresses) forwarding tables to make intelligent forwarding decisions, ensuring that packets are efficiently routed toward their final destination.

NEW QUESTION # 101

You want to configure the management port on a Juniper device. In this scenario, what is the management interface name?

- **A. fxp0**
- B. st0
- C. mtun0
- D. mt0

Answer: A

Explanation:

In Junos OS, the dedicated out-of-band management interface is typically named `fxp0`. This interface is used exclusively for management traffic and is physically separated from the data traffic interfaces. It allows administrators to perform management tasks even when the device is experiencing issues that affect the forwarding plane.

From the JNCIA-JunOS Study Guide and JunOS OS Documentation:

The `fixp0` interface is a dedicated management interface that provides out-of-band management access. It is commonly found on Juniper routers, switches, and security platforms. You assign IP addresses to this interface as you would any other, and it is often used to connect to a management network or to allow SSH, Telnet, or SNMP access."
