## Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q92-Q97):

### NEW QUESTION # 92

Which two statements are correct about the cSRX? (Choose two.)

- A. The cSRX supports firewall, NAT, IPS, and UTM services.
- B. The cSRX has three default zones: trust, untrust, and management
- C. The cSRX only supports Layer 2 "bump-in-the-wire" deployments.
- D. The cSRX supports BGP, OSPF, and IS-IS routing services.

**Answer: A,B**

Explanation:

The two statements that are correct about the cSRX are that it supports firewall, NAT, IPS, and UTM services, and that it has three default zones: trust, untrust, and management. The cSRX is a software- defined security solution that provides comprehensive network security capabilities and is designed for virtualized environments. It supports firewall, NAT, IPS, and UTM services to protect against threats, as well as BGP, OSPF, and IS-IS routing services for routing functionality. Additionally, the cSRX has three default zones: trust, untrust, and management. The trust zone is used to define traffic that is allowed to enter the network, the untrust zone is used to define traffic that should be blocked from entering the network, and the management zone is used to manage the device itself. The cSRX does not support Layer 2 "bump-in-the-wire" deployments.

### NEW QUESTION # 93

You have deployed an SRX300 Series device and determined that files have stopped being scanned. In this scenario, what is a reason for this problem?

- A. The file is too small to have a virus.
- B. The infected host communicated with a command-and-control server, but it did not download malware.
- C. You have exceeded the maximum files submission for your SRX platform size.
- D. The software license is a free model and only scans executable type files.

**Answer: C**

Explanation:

You have exceeded the maximum files submission for your SRX platform size: This statement is correct because file scanning on SRX300 Series device has a limit on the number of files that can be submitted per minute based on the platform size<sup>3</sup>. For example, SRX320 has a limit of 10 files per minute<sup>3</sup>.

### NEW QUESTION # 94

Which two statements are true about Juniper ATP Cloud? (Choose two.)

- A. Juniper ATP Cloud only uses one antivirus software package to analyze files.
- B. Juniper ATP Cloud does not use antivirus software packages to protect against zero-day threats.
- C. Juniper ATP Cloud uses antivirus software packages to protect against zero-day threats.
- D. Juniper ATP Cloud uses multiple antivirus software packages to analyze files.

**Answer: B,D**

Explanation:

Two statements that are true about Juniper ATP Cloud are:

Juniper ATP Cloud uses multiple antivirus software packages to analyze files: Juniper ATP Cloud is a cloud-based service that provides advanced threat prevention and detection for your network. It integrates with SRX Series firewalls and MX Series routers to analyze files and network traffic for signs of malicious activity. Juniper ATP Cloud uses multiple antivirus software packages from different vendors to scan files for known malware signatures and provide a comprehensive verdict based on their results.

Juniper ATP Cloud does not use antivirus software packages to protect against zero-day threats: Juniper ATP Cloud protects against zero-day threats by using dynamic analysis, not antivirus software packages.

Dynamic analysis is a method of executing files in a sandbox environment and observing their behavior and network interactions. Dynamic analysis can uncover unknown malware that may evade static analysis or signature-based detection methods.

#### NEW QUESTION # 95

You are preparing a proposal for a new customer who has submitted the following requirements for a vSRX deployment:

- globally distributed,
- rapid provisioning,
- scale based on demand,
- and low CapEx.

Which solution satisfies these requirements?

- **A. AWS**
- B. Juniper ATP Cloud
- C. Network Director
- D. VMWare ESXi

**Answer: A**

Explanation:

The solution that satisfies the requirements for a vSRX deployment is AWS. AWS (Amazon Web Services) is a cloud computing platform that provides on-demand services such as infrastructure, platform, software, and database as a service. AWS is globally distributed, meaning that it has data centers in multiple regions around the world. AWS also allows rapid provisioning, meaning that you can launch vSRX instances in minutes using preconfigured Amazon Machine Images (AMIs) or custom templates. AWS also enables scaling based on demand, meaning that you can adjust the number and size of vSRX instances according to your network traffic and performance needs. AWS also has low CapEx (capital expenditure), meaning that you only pay for what you use and do not need to invest in hardware or maintenance costs.

#### NEW QUESTION # 96

You are asked to create an IPS-exempt rule base to eliminate false positives from happening.

Which two configuration parameters are available to exclude traffic from being examined? (Choose two.)

- A. source port
- **B. source IP address**
- C. destination port
- **D. destination IP address**

**Answer: B,D**

Explanation:

You can specify the source IP address or a range of IP addresses to exclude certain traffic originating from specific network segments or devices. This is useful for whitelisting traffic from known, secure sources that are otherwise triggering false positives in the IPS system.

Similarly, you can specify the destination IP address or a range of addresses to exclude traffic destined for particular network hosts or segments. This helps in reducing false positives for traffic directed towards trusted internal resources or specific external services that are known to be safe.
