NEW QUESTION # 55

You are bringing a new network online with three IS-IS routers using default Junos election priorities. The routers are configured as Level 2 only IS-IS routers. Which statement is true about the DIS election in this scenario?

- A. The router with the lowest numerical lo0 IP address will be elected as the DIS.
- **B. The router with the highest MAC address will be elected as the DIS.**
- C. The router with the lowest MAC address will be elected as the DIS.
- D. The router with the highest numerical lo0 IP address will be elected as the DIS.

Answer: B

Explanation:

A router's priority for becoming the designated router is indicated by an arbitrary number from 0 through 127, which you configure on the IS-IS interface. The router with the highest priority becomes the designated router for the area (Level 1, Level 2, or both), also configured on the IS-IS interface. If routers in the network have the same priority, then the router with the highest MAC address is elected as the designated router. By default, routers have a priority value of 64.
