## Microsoft Realistic Associate PL-400 Level Exam Free PDF Quiz

Our PL-400 real exam helps you not only to avoid all the troubles of learning but also to provide you with higher learning quality than other students'. At the same time, our PL-400 exam materials have been kind enough to prepare the App version for you, so that you can download our PL-400 practice prep to any electronic device, and then you can take all the learning materials with you and review no matter where you are.

## Microsoft Power Platform Developer Sample Questions (Q172-Q177):

### NEW QUESTION # 172

You need to improve warehouse counting efficiency.  
What should you create?

- A. a canvas app that scans barcodes to allow a warehouse worker to select inventory counts
- B. A Power BI dashboard that shows the inventory counting variances
- C. a model-driven app that allows the user to key in inventory counts
- D. a flow that updates the warehouse counts as the worker performs the count

**Answer: A**

Explanation:

Scenario: Warehouse counting is performed manually by using a counting journal. All warehouse boxes and items are barcoded.

Topic 1, Adventure Works

Background

Current environment

Adventure Works Cycles wants to replace their paper-based bicycle manufacturing business with an efficient paperless solution. The company has one manufacturing plant in Seattle that produces bicycle parts, assembles bicycles, and distributes finished bicycles to the Pacific Northwest.

Adventure Works Cycles has a retail location that performs bicycle repair and warranty repair work. The company has six maintenance vans that repair bicycles at various events and residences.

Adventure Works Cycles recently deployed Dynamics 365 Finance and Dynamics 365 Manufacturing in a Microsoft-hosted environment for financials and manufacturing. The company plans to leverage the Microsoft Power Platform to migrate all of their distribution and retail workloads to Dynamics 365 Unified Operations.

The customer uses Dynamics 365 Sales, Dynamics 365 Customer Service and Dynamics 365 Field Service.

Retail store information

Adventure Works Cycle has one legal entity, four warehouses, and six field service technicians.

Warehouse counting is performed manually by using a counting journal. All warehouse boxes and items are barcoded.

The Adventure Works Cycles retail location performs bicycle inspections and performance tune-ups.

Technicians use paper forms to document the bicycle inspection performed before a tune-up and any additional work performed on the bicycle.

Adventure Works Cycles uses a Power Apps app for local bike fairs to attract new customers.

A canvas app is being developed to capture customer information when customers check in at the retail location. The app has the following features:

Customer selects yes or no if they are on the mailing list.

Customer selects the amount of times they have visited the store.

Customer selects the type of service needed.

The search result returns all last name records that match the search term.

Technology

Requirements

A plug-in for Dynamics 365 Sales automatically calculated the total billed time from all activities on a particular customer account, including sales representative visits, phone calls, email correspondence, and repair time compared with hours spent.

A shipping API displays shipping rates and tracking information on sales orders. The contract allows for 3,000 calls per month.

Ecommerce orders are processed in batch daily by using a manual import of sales orders in Dynamics 365 Finance.

Microsoft Teams is used for all collaboration.

All testing and problem diagnostics are performed in a copy of the production environment.

Customer satisfaction surveys are recorded with Microsoft Forms Pro. Survey replies from customers are sent to a generic mailbox.

Automation

A text message must be automatically sent to a customer to confirm an appointment and to notify when a technician is on route that includes their location.

Ecommerce sales orders must be integrated into Dynamics 365 Finance and then exported to Azure every night.

A text alert must be sent to employees scheduled to assist in the repair area of the retail store if the number of repair check-ins exceeds eight.

Submitted customer surveys must generate an email to the correct department. Approval and follow-up must occur within a week.

Reporting

The warehouse manager's dashboard must contain warehouse counting variance information.

A warehouse manager needs to quickly view warehouse KPIs by using a mobile device.

Power BI must be used for reporting across the organization.

User experience

Warehouse counting must be performed by using a mobile app that scans barcodes on boxes.

All customer repairs must be tracked in the system no matter where they occur.

Qualified leads must be collected from local bike fairs.

Issues

Warehouse counting must be performed by using a mobile app that scans barcodes on boxes.

All customer repairs must be tracked in the system no matter where they occur.

Qualified leads must be collected from local bike fairs.

Internal

User1 reports receives an intermittent plug-in error when viewing the total bill customer time.

User2 reports that Azure consumption for API calls has increased significantly to 100 calls per minute in the last month.

User2 reports that sales orders have increased.

User5 receives the error message: 'Endpoint unavailable' during a test of the technician dispatch ISV solution.

The parts department manager who is the approver for the department is currently on sabbatical.

External

CustomerB reports that the check-in app returned only one search result for their last name, which is not the correct name.

Nine customers arrive in the repair area of the retail store, but no texts were sent to scheduled employees.

Customers report that the response time from the information email listed on the Adventure Works Cycles website is greater than five days.

CustomerC requested additional information from the parts department through the customer survey and has not received a response one week later.

### NEW QUESTION # 173

You create a Power Apps app that integrates with Dynamics 365 Customer Service.

You update the app and run solution checker on the original solution. You receive an error stating solution checker cannot export the solution.

You need to determine the primary cause for the issue.

What is the primary cause?

- A. The solution was not exported before running solution checker.
- B. Solution checker cannot check default solutions.
- C. The environment is an Administrator mode.
- **D. The original solution is locked because there is a dependent patch.**

**Answer: D**

### NEW QUESTION # 174

You need to complete a PowerApps component framework (PCF) control.

How should you define the order in the manifest? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

The screenshot shows a manifest file with the following structure:

```
<resources>  
  <code path="scripts/HelloWorldControlWave.js" order="1"/>  
  <code path="scripts/HelloWorldControlRandom.js" order="2"/>  
  <css path="style/HelloWorldControl.css" order="3"/>  
  <html path="HelloWorldControlWaveRandom.htm" order="3"/>  
</resources>
```

Each `order` attribute is followed by a dropdown menu. The first dropdown (for the first `code` element) has '1' selected. The second dropdown (for the second `code` element) has '2' selected. The third dropdown (for the `css` element) has '3' selected. The fourth dropdown (for the `html` element) has '3' selected. A watermark 'practicedump.com' is visible across the image, and the Microsoft logo is at the bottom.

**Answer:**

**Explanation:**

```

<resources>
  <code path="scripts/HelloWorldControlWave.js" order="1"/>
  <code path="scripts/HelloWorldControlRandom.js" order="2"/>
  <css path="style/HelloWorldControl.css" order="3"/>

  <html path="HelloWorldControlWaveRandom.htm" order="4"/>
</resources>

```

Explanation:

```

<resources>
  <code path="scripts/HelloWorldControlWave.js" order="1"/>
  <code path="scripts/HelloWorldControlRandom.js" order="2"/>
  <css path="style/HelloWorldControl.css" order="3"/>

  <html path="HelloWorldControlWaveRandom.htm" order="4"/>
</resources>

```

The order property specifies the order of a flexible item relative to the rest of the flexible items inside the same container.

### NEW QUESTION # 175

You need to design functionality to process background check results.

What should you implement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

#### Requirement

Select an implementation pattern

#### Implementation option

|             |   |
|-------------|---|
|             | ▼ |
| Push        |   |
| Pull        |   |
| Event-based |   |

Apply stage changes to Dataverse

|               |   |
|---------------|---|
|               | ▼ |
| Update        |   |
| Upsert        |   |
| Alternate key |   |

Answer:

Explanation:

**Requirement****Implementation option**

Select an implementation pattern

  
 Push  
 Pull  
 Event-based

Apply stage changes to Dataverse

  
 Update  
 Upsert  
 Alternate key

Microsoft

Explanation:

**Answer Area****Requirement**

Select an implementation pattern.

Apply stage changes to Dataverse.

Pull

Update

Microsoft

**NEW QUESTION # 176**

A company plans to deploy an Azure Function that connects to Dataverse on a defined schedule to bulk- update Account data. Corporate policy discourages password-based authentication if other viable options exist.

You need to implement the function app.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

List of steps to implement Dataverse authentication from an Azure Function

- Enable system-assigned managed identity.
- Create the Azure Functions app.
- Create an app password for IntegrationAccount.
- Run pac admin application register.
- Set IntegrationAccount access mode to Administrative.
- Create a Microsoft Entra ID user named IntegrationAccount.
- Set IntegrationAccount access mode to Non-interactive.
- Run pac admin assign-user.

Answer Area

**Answer:**

Explanation:

List of steps to implement Dataverse authentication from an Azure Function

- Enable system-assigned managed identity.
- Create the Azure Functions app.
- Create an app password for IntegrationAccount.
- Run pac admin application register.
- Set IntegrationAccount access mode to Administrative.
- Create a Microsoft Entra ID user named IntegrationAccount.
- Set IntegrationAccount access mode to Non-interactive.
- Run pac admin assign-user.

Answer Area

- Create a Microsoft Entra ID user named IntegrationAccount.
- Set IntegrationAccount access mode to Non-interactive.
- Run pac admin assign-user.

Explanation:
