Reliable Microsoft GH-900 Exam Cram - GH-900 Latest Dumps Free

What's more, part of that PassTorrent GH-900 dumps now are free: https://drive.google.com/open?id=170pD1vOZdnxqT2QrU1mOYv0Q23b7AiIL

Learning knowledge is not only to increase the knowledge reserve, but also to understand how to apply it, and to carry out the theories and principles that have been learned into the specific answer environment. The GitHub Foundations exam dumps are designed efficiently and pointedly, so that users can check their learning effects in a timely manner after completing a section. Our GH-900 test material is updating according to the precise of the real exam. Our GitHub Foundations exam dumps will help you to conquer all difficulties you may encounter.

Our approach to Microsoft GH-900 Exam Preparation is focused on quality over quantity, which means our Microsoft GH-900 practice tests help you identify the most important concepts and skills you need to master to pass the exam. We also provide ongoing 24/7 support to help you stay on track while using our product.

GH-900 Latest Dumps Free | GH-900 Test King

If you are determined to purchase our GitHub Foundations GH-900 valid exam collection materials for your companies, if you pursue long-term cooperation with site, we will have some relate policy. Firstly we provide one-year service warranty for every buyer who purchased Microsoft GH-900 valid exam collection materials.

Microsoft GH-900 Exam Syllabus Topics:

Topic	Details
Topic 1	• Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.
Topic 2	• Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI • CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects.

Topic 3	• Introduction to Git and GitHub: This section of the exam measures skills of Junior Developers and Platform Support Specialists and covers the basic understanding of Git and GitHub. It explains what Git is and why it is used, the fundamental Git workflow, and concepts related to repositories including their local and remote distinctions. Candidates learn essential Git commands such as initializing and cloning repositories, adding and committing changes, pushing and pulling updates, and branching and merging. It also covers navigating GitHub by creating accounts, managing repositories, understanding its interface, and working with issues and pull requests.
Topic 4	• Project Management: This section is designed for Project Coordinators and Product Managers and focuses on using GitHub Projects for project management. Candidates learn to create and manage GitHub Projects, utilize project boards for organizing tasks, and integrate project workflows with issues and pull requests to maintain project visibility and progress.
Topic 5	• Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI • CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews.
Topic 6	• Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.

Microsoft GitHub Foundations Sample Questions (Q38-Q43):

NEW QUESTION # 38

Which of the following is always true about the feature preview phases Alpha and Beta?

- A. Beta features provide technical support.
- B. Alpha features are documented.
- C. Alpha features are not available to the public.
- D. Alpha and Beta features offer Service Level Agreements (SLAs).

Answer: C

Explanation:
The terms Alpha and Beta are often used in software development to describe different stages of feature testing and release.
Alpha Features:
Option A is correct because Alpha features are typically in the early stages of development and are not available to the public. They are usually tested internally or by a limited audience.
Incorrect Options:
Option B is incorrect because Alpha features are often undocumented as they are in the early development phase.
Option C is incorrect because Alpha and Beta features usually do not offer Service Level Agreements (SLAs) due to their experimental nature.
Option D is incorrect because Beta features might offer limited support, but it is not guaranteed, especially compared to fully released features.

NEW QUESTION # 39

What features are offered by Copilot for Business that are not offered by Copilot for individuals?
(Each answer presents a complete solution. Choose three.)

- A. VPN proxy support via self-signed certificates
- B. Blocks suggestions matching public code
- C. Plugs directly into the editor

- D. Offers multi-line function suggestions
- E. Support for organization or enterprise GitHub accounts
- F. Organization-wide policy management

Answer: B,E,F

Explanation:
GitHub Copilot for Business offers several features that are tailored to the needs of organizations, providing more control, security, and support compared to the individual version.
Organization-wide Policy Management:
Option B is correct because Copilot for Business allows organizations to manage policies across their entire user base, providing control over how Copilot is used within the organization.
Blocking Suggestions Matching Public Code:
Option C is correct because Copilot for Business includes enhanced security features, such as blocking code suggestions that match public code to prevent inadvertent use of unlicensed code.
Support for Organization or Enterprise GitHub Accounts:
Option E is correct because Copilot for Business supports integration with GitHub Enterprise accounts, offering additional administrative controls and integration capabilities.
Incorrect Options:
Option A (multi-line function suggestions) is a feature available in both individual and business versions, so it does not differentiate the business offering.
Option D (VPN proxy support via self-signed certificates) is not a primary differentiator of Copilot for Business.
Option F (plugs directly into the editor) is true for both individual and business versions, so it is not unique to Copilot for Business.

NEW QUESTION # 40
What are the defining features of Git?

- A. Low-cost local branching, convenient staging areas, multiple workflows, and being designed for managing small projects
- B. Sequential version control, cloud-based hosting service, and being designed for collaboration on large projects
- C. Centralized version control, proprietary software, and being designed for small projects
- D. Distributed version control, open source software, and being designed for handling projects of any size with efficiency

Answer: D

Explanation:
Git is a widely-used version control system that has several defining features:
Distributed Version Control:
Git is a distributed version control system, meaning that every developer has a full copy of the entire repository, including its history, on their local machine. This enables greater flexibility, as work can be done offline and each user has access to the full project history.
Open Source Software:
Git is open-source, meaning its source code is freely available for use, modification, and distribution. This fosters a large community of users and contributors who continuously improve the software.
Efficiency with Large Projects:
Git is designed to handle projects of any size with speed and efficiency. It can manage large codebases and many contributors without significant performance degradation, making it suitable for everything from small personal projects to large, complex software systems.
Incorrect Options:
Option B is incorrect because Git is not a sequential version control system, nor is it inherently tied to cloud-based services. GitHub, GitLab, and other platforms offer cloud hosting for Git repositories, but Git itself is a version control tool.
Option C is incorrect because Git is not limited to small projects; it is designed to scale efficiently, and the other features mentioned are only partial descriptions of Git's capabilities.
Option D is incorrect because Git is not a centralized version control system; it is distributed. Additionally, Git is open-source, not proprietary, and is used for projects of all sizes.

NEW QUESTION # 41

A distributed version control system is best described as a system that:

- A. Requires developers to manually track and manage different versions of their files using naming conventions and manual backups.
- B. Relies on a central server to store the entire project history and allows developers to check out files for editing.
- C. Stores project files on a cloud-based server and allows multiple developers to collaborate on the same codebase simultaneously.
- D. Ensures each developer has their own local copy of the entire code repository, including the complete project history and metadata.

Answer: D

Explanation:
A distributed version control system (DVCS) like Git is best described as a system that ensures each developer has their own local copy of the entire code repository, including the complete project history and metadata. This decentralized approach allows developers to work independently, with full access to the project's history and files, and later synchronize their changes with others. Unlike centralized systems, DVCS does not rely on a single central server, which provides greater flexibility and robustness in collaboration.

NEW QUESTION # 42

Which of the following information is available by default in a user's GitHub profile?

- A. Personal biography and profile picture
- B. Public Secure Shell Protocol (SSH) keys
- C. A list of the user's private repositories
- D. Email address and password

Answer: A

Explanation:
A user's GitHub profile typically includes public information such as a personal biography, profile picture, and a list of public repositories. More sensitive information, like email addresses and passwords, is not publicly displayed.
Personal Biography and Profile Picture:
Option A is correct because these are standard elements displayed on a user's public GitHub profile. This information is meant to provide a brief introduction to the user and their interests or skills.
Incorrect Options:
Option B is incorrect because public SSH keys may be associated with a user's account but are not displayed by default on the profile page.
Option C is incorrect because private repositories are not listed on a public profile.
Option D is incorrect because a user's email address and password are private information and not displayed on their public profile.
