

# Reliable MuleSoft-Integration-Architect-I Exam Practice, MuleSoft-Integration-Architect-I Latest Exam Answers

BONUS!!! Download part of Prep4pass MuleSoft-Integration-Architect-I dumps for free: <https://drive.google.com/open?id=18uBaUVjngVC1-HEQitkWmPLZa772whg>

We provide free update to the clients within one year. The clients can get more MuleSoft-Integration-Architect-I guide materials to learn and understand the latest industry trend. We boost the specialized expert team to take charge for the update of MuleSoft-Integration-Architect-I practice guide timely and periodically. They refer to the excellent published authors' thesis and the latest emerging knowledge points among the industry to update our MuleSoft-Integration-Architect-I Training Materials. After one year, the clients can enjoy 50 percent discounts and the old clients enjoy some certain discounts when purchasing

It is the right time to advance your professional career. You can do this easily after passing the Salesforce Certified MuleSoft Integration Architect I MuleSoft-Integration-Architect-I certification exam. To pass the Salesforce MuleSoft-Integration-Architect-I exam the Salesforce MuleSoft-Integration-Architect-I Exam Practice test questions are the right choice. The updated and real Salesforce Dumps are ready for download. Just download and start preparation.

>> Reliable MuleSoft-Integration-Architect-I Exam Practice <<

## Salesforce - MuleSoft-Integration-Architect-I –Professional Reliable Exam Practice

It is known to us that our MuleSoft-Integration-Architect-I learning materials have been keeping a high pass rate all the time. There is no doubt that it must be due to the high quality of our study materials. It is a matter of common sense that pass rate is the most important standard to testify the MuleSoft-Integration-Architect-I training files. The high pass rate of our study materials means that our products are very effective and useful for all people to pass their MuleSoft-Integration-Architect-I Exam and get the related certification. So if you buy the MuleSoft-Integration-Architect-I study questions from our company, you will get the certification in a shorter time.

## Salesforce MuleSoft-Integration-Architect-I Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> <li>Designing Automated Tests for Mule Applications: This topic covers unit test suites, and scenarios for integration and performance testing.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Designing Integration Solutions to Meet Reliability Requirements: It includes selecting alternatives to traditional transactions, recognizing the purpose of various scopes and strategies, differentiating disaster recovery and high availability, and using local and XA transactions.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Designing Integration Solutions to Meet Persistence Requirements: It addresses the usage of VM queues and connectors, object stores and services, and stateful components configured with object stores.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Designing Architecture Using Integration Paradigms: This topic focuses on creating high-level integration architectures using various paradigms. It includes API-led connectivity, web APIs and HTTP, event-driven APIs, and message brokers, and designing Mule application using messaging patterns and technologies.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Designing Integration Solutions to Meet Performance Requirements: This topic covers meeting performance and capacity goals, using streaming features, and processing large message sequences.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>Designing and Developing Mule Applications: It includes selecting application properties, using fundamental features, designing with core routers, understanding the Salesforce Connector, and leveraging core connectors.</li> </ul>

## Salesforce Certified MuleSoft Integration Architect I Sample Questions (Q220-Q225):

### NEW QUESTION # 220

An organization plans to extend its Mule APIs to the EU (Frankfurt) region.

Currently, all Mule applications are deployed to CloudHub 1.0 in the default North American region, from the North America control plane, following this naming convention: {API-name}-{environment} (for example, Orderssapi-dev, Orders-sapi-qa, Orders-sapi-prod, etc.).

There is no network restriction to block communications between APIs.

What strategy should be implemented in order to deploy the same Mule APIs to the CloudHub 1.0 EU region from the North America control plane, as well as to minimize latency between APIs and target users and systems in Europe?

- A. In API Manager, leave the Region property blank (default) to deploy an API proxy named {API-name}~proxy~{environment}.de-cl for each Mule application.  
Communicate the new url {API-name}-proxy-{environment}.de-cl.cloudhub.io to the consuming API clients in Europe.
- B. In Runtime Manager, for each Mule application deployment, set the Region property to EU (Frankfurt) and reuse the same Mule application name as in the North American region.  
Communicate the new urls {API-name}-{environment}.de-ci.cloudhub.io to the consuming API clients In Europe.
- C. In Runtime Manager, for each Mule application deployment, leave the Region property blank (default) and change the Mule application name to {API-name}-{environment}.de-cl.  
Communicate the new urls {API-name}-{environment}.de-ci1.cloudhub.io to the consuming API clients in Europe.
- D. In API Manager, set the Region property to EU (Frankfurt) to create an API proxy named {API-name}-proxy-{environment} for each Mule application.  
Communicate the new url {API-name}-proxy-{environment}.de-cl.cloudhub.io to the consuming API clients In Europe.

**Answer: B**

Explanation:

To extend Mule APIs to the EU (Frankfurt) region and minimize latency for European users, follow these steps:

\* Set Region Property: In Runtime Manager, for each Mule application deployment, set the Region property to EU (Frankfurt). This deploys the application to the desired region, optimizing performance for European users.

\* Reuse Application Names: Keep the same Mule application names as used in the North American region. This approach maintains consistency and simplifies management.

\* Communicate New URLs: Inform the consuming API clients in Europe of the new URLs in the format {API-name}-{environment}.de-ci.cloudhub.io. These URLs will direct the clients to the applications deployed in the EU region, ensuring reduced latency and improved performance.

This strategy effectively deploys the same Mule APIs to the CloudHub EU region, leveraging the existing control plane in North America.

#### NEW QUESTION # 221

According to MuleSoft, a synchronous invocation of a RESTful API using HTTP to get an individual customer record from a single system is an example of which system integration interaction pattern?

- A. Multicast
- B. Batch
- C. Request-Reply
- D. One-way

**Answer: C**

#### NEW QUESTION # 222

A Mule application is built to support a local transaction for a series of operations on a single database. The Mule application has a Scatter-Gather that participates in the local transaction.

What is the behavior of the Scatter-Gather when running within this local transaction?

- A. Execution of all routes within the Scatter-Gather occurs in parallel Any error that occurs inside the Scatter-Gather will result in a rollback of all the database operations
- B. Execution of each route within the Scatter-Gather occurs in parallel Any error that occurs inside the Scatter-Gather will NOT result in a rollback of any of the database operations
- C. Execution of each route within the Scatter-Gather occurs sequentially Any error that occurs inside the Scatter-Gather will result in a rollback of all the database operations
- D. Execution of each route within the Scatter-Gather occurs sequentially Any error that occurs inside the Scatter-Gather will NOT result in a rollback of any of the database operations

**Answer: C**

#### NEW QUESTION # 223

According to MuleSoft, which major benefit does a Center for Enablement (C4E) provide for an enterprise and its lines of business?

- A. Centrally managing return on investment (ROI) reporting from lines of business to leadership
- B. Centralizing project management across the lines of business
- C. Accelerating self-service by the lines of business
- D. Enabling Edge security between the lines of business and public devices

**Answer: C**

Explanation:

A Center for Enablement (C4E) provides significant benefits to an enterprise and its lines of business by accelerating self-service capabilities. A C4E is a cross-functional team that promotes the use of best practices, reusable assets, and consistent methodologies across the organization. By enabling lines of business to access and use shared resources, tools, and knowledge independently, a C4E empowers these units to deliver projects faster and more efficiently. This self-service model reduces reliance on central IT for every initiative, fosters innovation, and enhances the overall agility of the organization.

References

\* MuleSoft Center for Enablement (C4E) Overview

\* Best Practices for Implementing a C4E on Anypoint Platform

A Center for Enablement (C4E) provides significant benefits by accelerating self-service capabilities for lines of business. Here's how:

\* Self-Service Enablement: C4E empowers lines of business to access, use, and create integrations and APIs independently, without relying heavily on central IT teams.

\* Guidelines and Standards: The C4E establishes best practices, standards, and reusable frameworks, ensuring that lines of business can develop solutions efficiently and consistently.

\* Faster Time-to-Market: By enabling self-service, lines of business can rapidly develop and deploy solutions to meet their specific needs, resulting in faster time-to-market for new initiatives.

\* Reduced Bottlenecks: Self-service reduces dependency on central IT, alleviating potential bottlenecks and allowing IT to focus on governance, security, and strategic projects.

The C4E model thus accelerates innovation and responsiveness within the enterprise.

Center for Enablement (C4E)

Benefits of a C4E

#### NEW QUESTION # 224

How are the API implementation, API client, and API consumer combined to invoke and process an API?

- A. An API client creates an API consumer, which receives API invocation from an API such that they are processed for an API implementation
- B. The API client creates an API consumer which sends API invocations to an API such that they are processed by API implementation
- C. The API consumer creates an API client which sends API invocations to an API such that they are processed by an API implementation
- D. The API consumer creates an API implementation, which receives API invocations from an API such that they are processed for an API client

**Answer: A**

Explanation:

The API consumer creates an API client which sends API invocations to an API such that they are processed by an API implementation. This is based on below definitions: API client \* An application component \* that accesses a service \* by invoking an API of that service - by definition of the term API over HTTP. API consumer \* A business role, which is often assigned to an individual \* that develops API clients, i.e., performs the activities necessary for enabling an API client to invoke APIs. API implementation \* An application component \* that implements the functionality.

#### NEW QUESTION # 225
