WGU Network-and-Security-Foundation Sample Questions (Q28-Q33):

NEW QUESTION # 28

Which layer of the OSI model includes the TCP?

- A. Network
- B. Session
- C. Application
- **D. Transport**

Answer: D

Explanation:

The Transport layer (Layer 4 of the OSI model) includes the Transmission Control Protocol (TCP), which provides reliable, connection-oriented communication. TCP ensures error-checking, sequencing, and retransmission of lost packets.

* Application layer deals with end-user protocols like HTTP and FTP.

* Session layer manages communication sessions but not transport protocols.

* Network layer focuses on IP addressing and routing, not transport mechanisms.

NEW QUESTION # 29

A company wants to implement a cloud service to obtain access to virtual machines. The company wants to be able to choose the operating systems and configure each of the machines.

What is the type of cloud service model that fits the needs of this company?

- A. Platform as a Service (PaaS)
- B. Software as a Service (SaaS)
- C. Function as a Service (FaaS)
- **D. Infrastructure as a Service (IaaS)**

Answer: D

Explanation:

Infrastructure as a Service (IaaS) provides virtualized computing resources over the cloud, including virtual machines where users can install and configure their own operating systems and applications. It offers flexibility and scalability without requiring hardware investment. Examples include AWS EC2 and Microsoft Azure Virtual Machines.

* FaaS executes small code functions without infrastructure management.

* PaaS provides a managed platform but not full OS control.

* SaaS offers ready-to-use applications without infrastructure control.

NEW QUESTION # 30

A company is designing an information system and is maintaining a focus on the user experience and resulting productivity rather than on the technology itself.

What is the security principle implemented in this scenario?

- A. Fail-safe
- **B. Human-centeredness**
- C. Zero-trust model
- D. Least common mechanism

Answer: B

Explanation:

Human-centeredness in security design prioritizes user experience and productivity while implementing security measures. It ensures that security policies are intuitive and do not excessively burden users, reducing resistance to security compliance.

* Least common mechanism minimizes shared resources to enhance security.

* Fail-safe ensures secure defaults in case of system failure.

* Zero-trust model assumes no inherent trust in users or devices.

NEW QUESTION # 31

A host is already set up with an operating system. An administrator wants to install a hypervisor atop the operating system to allow for setting up virtual machines.

Which hypervisor should be used?

- A. Proprietary
- B. Open source
- **C. Type 2**
- D. Type 1

Answer: C

NEW QUESTION # 32

An organization's network has been the target of several cyberattacks. Which strategy should the organization use for Wi-Fi hardening?

- A. Trust local hosts by default
- **B. Disable ESSID broadcasting**
- C. Implement wired equivalent privacy (WEP)
- D. Add more access points

Answer: B

Explanation:

Disabling ESSID broadcasting prevents the Wi-Fi network name from being publicly visible, making it harder for attackers to discover and target the network. While this is not a foolproof security measure, it adds an additional layer of protection against unauthorized access.

* Trusting local hosts by default is risky and not a security best practice.

* Adding more access points improves coverage but does not enhance security.

* WEP is outdated and highly vulnerable to attacks; WPA2 or WPA3 should be used instead.
