

Reliable NSK300 Exam Price & NSK300 Excellect Pass Rate

2025 Latest BraindumpsVCE NSK300 PDF Dumps and NSK300 Exam Engine Free Share: https://drive.google.com/open?id=1_BiFwfv-UkoJpp5Jj7rji0NaahaA7r9s

The BraindumpsVCE wants to win the trust of Netskope Certified Cloud Security Architect (NSK300) certification exam candidates. To achieve this objective BraindumpsVCE is presenting Valid, Real, and Updated Netskope Certified Cloud Security Architect (NSK300) exam questions in three different formats. These formats have high demand in the market and offer the easiest and quick way for Netskope Certified Cloud Security Architect (NSK300) exam preparation.

The passing rate of our NSK300 study materials is the issue the client mostly care about and we can promise to the client that the passing rate of our product is 99% and the hit rate is also high. Our study materials are selected strictly based on the real NSK300 exam and refer to the exam papers in the past years. Our expert team devotes a lot of efforts on them. We also update frequently to guarantee that the client can get more learning NSK300 resources and follow the trend of the times. So if you use our NSK300 study materials you will pass the NSK300 test with high success probability.

NSK300 Excellect Pass Rate & Verified NSK300 Answers

With all the questions and answers of our Netskope NSK300 study materials, your success is guaranteed. Moreover, we have Demos as freebies. The free demos give you a prove-evident and educated guess about the content of our Netskope Certified Cloud Security Architect NSK300 Practice Questions. As long as you make up your mind on this NSK300 exam, you can realize their profession is unquestionable.

Netskope Certified Cloud Security Architect Sample Questions (Q39-Q44):

NEW QUESTION # 39

What are three valid Instance Types for supported SaaS applications when using Netskope's API-enabled Protection? (Choose three.)

- A. Quarantine
- B. DLP Scan
- C. Behavior Analytics
- D. API Data Protection
- E. Forensic

Answer: A,B,D

Explanation:

When using Netskope's API-enabled Protection for supported SaaS applications, the valid instance types are:

API Data Protection (B): This type is used to connect to cloud apps using APIs to find sensitive content, enforce policy controls, and quarantine malware¹.

DLP Scan (D): This instance type involves scanning for data loss prevention, which is a key component of Netskope's API Data Protection¹.

Quarantine (E): This instance type allows for the isolation of potentially harmful or sensitive data until it can be reviewed or remediated¹.

Behavior Analytics and Forensic (A) are not listed as instance types for API-enabled Protection in the provided resources.

NEW QUESTION # 40

You are building an architecture plan to roll out Netskope for on-premises devices. You determine that tunnels are the best way to achieve this task due to a lack of support for explicit proxy in some instances and IPsec is the right type of tunnel to achieve the desired security and steering.

What are three valid elements that you must consider when using IPsec tunnels in this scenario? (Choose three.)

- A. bandwidth considerations
- B. Netskope Client behavior when on-premises
- C. the categories to be blocked
- D. the impact of threat scanning performance
- E. cipher support on tunnel-initiating devices

Answer: A,B,E

NEW QUESTION # 41

Users in your network are attempting to reach a website that has a self-signed certificate using a GRE tunnel to Netskope. They are currently being blocked by Netskope with an SSL error. How would you allow this traffic?

- A. Configure a Real-time Protection policy with the action set to Allow.
- B. Configure a Do Not Decrypt SSL Decryption rule to allow traffic to pass.
- C. Ensure that the users add the self-signed certificate to their local certificate store.
- D. Set the No SNI setting in Netskope to Bypass.

Answer: B

Explanation:

To allow traffic from a website with a self-signed certificate that is being blocked by Netskope with an SSL error, the correct action is to configure a Do Not Decrypt SSL Decryption rule. This rule will allow the traffic to pass without being decrypted, thus bypassing the SSL error caused by the self-signed certificate. This is a common practice for handling traffic from trusted internal applications or specific external sites that use self-signed certificates¹.

The Netskope Community Forum discusses the application of exceptions for sites with self-signed certificates and the use of SSL decryption policies to bypass the blocking¹. Additionally, the Netskope Knowledge Portal provides information on managing error settings and configuring SSL decryption rules².

NEW QUESTION # 42

You built a number of DLP profiles for different sensitive data types. If a file contains any of this sensitive data, you want to take the most restrictive policy action but also create incident details for all matching profiles.

Which statement is correct in this scenario?

- A. Create a Real-time Protection policy for each DLP profile; each matched profile will generate a unique DLP incident.
- B. Create a single Real-time Protection policy and include all of the DLP profiles; each matched profile will generate a unique DLP incident
- C. Create a single Real-time Protection policy and include all of the DLP profiles; all matched profiles will show up in a single DLP incident.
- D. Create a Real-time Protection policy for each DLP profile; all matched profiles will show up in a single DLP incident

Answer: C

Explanation:

When configuring a Real-time Protection policy with multiple DLP profiles, if the content matches multiple profiles, the policy performs the most restrictive action associated with the DLP profiles that match for that policy. The resulting incident lists all the profiles that matched along with their corresponding forensic information. This means that even though the most restrictive action is taken, details for all matching profiles are created and included in a single DLP incident¹².

NEW QUESTION # 43

You are building an architecture plan to roll out Netskope for on-premises devices. You determine that tunnels are the best way to achieve this task due to a lack of support for explicit proxy in some instances and IPsec is the right type of tunnel to achieve the desired security and steering.

What are three valid elements that you must consider when using IPsec tunnels in this scenario? (Choose three.)

- **A. the impact of threat scanning performance**
- B. Netskope Client behavior when on-premises
- **C. bandwidth considerations**
- D. the categories to be blocked
- **E. cipher support on tunnel-initiating devices**

Answer: A,C,E

Explanation:

When using IPsec tunnels, especially in the context of deploying Netskope for on-premises devices, several factors must be considered to ensure a secure and efficient architecture:

Cipher support on tunnel-initiating devices (A): It is crucial to ensure that the devices initiating the IPsec tunnels support the ciphers used by Netskope. This compatibility is necessary for establishing secure connections.

Bandwidth considerations (B): The bandwidth available for the IPsec tunnels will affect the data throughput and performance of the connection. Adequate bandwidth must be allocated to handle the expected traffic without causing bottlenecks.

The impact of threat scanning performance (D): The performance of threat scanning can be affected by the encryption and decryption processes in IPsec tunnels. It is important to consider how the threat scanning capabilities will perform under the additional load of encrypted traffic.

These elements are essential for the successful implementation of IPsec tunnels in a Netskope architecture plan for on-premises devices¹².

NEW QUESTION # 44

.....

According to our investigation, the test syllabus of the NSK300 exam is changing every year. Some new knowledge will be added into the annual real exam. Some old knowledge will be deleted. So you must have a clear understanding of the test syllabus of the NSK300 study materials. Now, you can directly refer to our study materials. Our experts have carefully researched each part of the test syllabus of the NSK300 Study Materials. Then they compile new questions and answers of the study materials according to the new knowledge parts.

NSK300 Excellect Pass Rate: https://www.braindumpsvce.com/NSK300_exam-dumps-torrent.html

As a powerful tool for workers to walk forward a higher self-improvement, our NSK300 Excellect Pass Rate - Netskope Certified Cloud Security Architect latest test cram continues to pursue our passion for better performance and human-centric technology, After you choose our NSK300 latest study material, we will also provide one year free renewal service, The customization feature of these Netskope Certified Cloud Security Architect (NSK300) practice questions (desktop or web-based) allows users to change the settings of their mock exams as per their preferences.

Managing concurrent operations with processes and threads, For consistency, Verified NSK300 Answers the metaclasses must be instances of metametaclasses, which should be instances of metametametaclasses, and so on.
