

Reliable Nutanix NCP-DB Test Labs & Download NCP-DB Fee

DOWNLOAD the newest Pass4training NCP-DB PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1AEVJQAEBPINSXZUh7By4HQN21u_h_lb

Pass4training offers a free demo of the NCP-DB exam dumps for customers to try out before purchasing. This allows individuals to examine the NCP-DB exam prep material and make decisions. Customers will receive free updates to the NCP-DB exam questions for three months if any changes are made to the Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 (NCP-DB) exam content after the purchase of the NCP-DB Practice Questions. Pass4training has helped thousands of individuals worldwide in obtaining their NCP-DB certification through their real NCP-DB pdf dumps and practice tests. Passing the Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 (NCP-DB) exam on the first attempt can save individuals both time and money.

Nutanix NCP-DB Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Protect NDB-managed Databases Using Time Machine: SLA retention policies, source databases, clones, protection of databases, and Data Access Management (DAM) policies are discussed in this topic.
Topic 2	<ul style="list-style-type: none">Operate and Maintain an NDB Environment: Application of procedural concepts to register database server, provision databases, and test and publish database patches. Additionally, the topic explains the right method to apply Linux OS patches. Lastly, it delves into databases and troubleshooting of NDB operations.
Topic 3	<ul style="list-style-type: none">Administer an NDB Environment: While focusing on the administration of an NDB environment, this topic focuses on managing NDB profiles, applying procedural concepts, and managing networks in NDB. Lastly, the topic explains sub-topics of managing access controls in NDB and identifying how to use NDB APIs and CLI.
Topic 4	<ul style="list-style-type: none">Deploy and Configure an NDB Solution: This topic discusses how to deploy, configure, and NDB Instance.
Topic 5	<ul style="list-style-type: none">Describe NDB Concepts: It defines database and NDB terminology. The topic also explains benefits and features of NDB.

In today's rapidly changing Nutanix industry, the importance of obtaining Nutanix NCP-DB certification has become increasingly evident. With the constant evolution of technology, staying competitive in the job market requires professionals to continuously upgrade their skills and knowledge. The Pass4training is committed to completely assisting you in exam preparation with NCP-DB Questions. Success in the Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 (NCP-DB) certification exam is crucial in the tech sector, where the stakes are high, and a single mistake can have significant consequences.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 Sample Questions (Q12-Q17):

NEW QUESTION # 12

What happens to the primary member in a MongoDB Server Cluster during the NDB patching process?

- A. It is patched last and is restored to its original state.
- B. It becomes a read-only member during the patching process.
- **C. It is patched first and then becomes a secondary member.**
- D. It is skipped during the patching process to ensure no downtime.

Answer: C

Explanation:

According to the NDB documentation, the NDB patching process for MongoDB Server Cluster follows these steps1:

- * NDB identifies the primary member of the MongoDB Server Cluster and patches it first.
- * NDB triggers a failover to elect a new primary member from the remaining secondary members.
- * NDB patches the former primary member, which becomes a secondary member after the failover.
- * NDB patches the remaining secondary members one by one.
- * NDB verifies the patching status and the cluster health.

This process ensures that the MongoDB Server Cluster always has a primary member available to handle write operations, while minimizing the downtime and the impact on the cluster performance.

NEW QUESTION # 13

As administrator has been asked to add a database to a PostgreSQL instance already managed by NDB.

Which task should be performed?

- A. Provision a new DB server VM and add the new DB.
- B. Update a database clone to add a new DB.
- C. Register a new DB VM to add the DB.
- **D. Add a new database to a source DB.**

Answer: D

Explanation:

When an administrator is asked to add a database to a PostgreSQL instance already managed by NDB, the most appropriate task is to add a new database to the existing source database. In NDB, a PostgreSQL instance refers to a managed database server or cluster, and adding a new database involves creating it within the existing instance using NDB's database management capabilities. This can be done through the NDB GUI or CLI by selecting the source database and adding the new database, leveraging the current configuration and resources without requiring new VM provisioning.

* Option A (Add a new database to a source DB) is correct as it directly addresses adding a database to an existing managed instance.

* Option B (Register a new DB VM to add the DB) is incorrect because a new VM registration is unnecessary when the instance is already managed.

* Option C (Provision a new DB server VM and add the new DB) is incorrect because provisioning a new VM is overkill for adding a database to an existing instance.

* Option D (Update a database clone to add a new DB) is incorrect because clones are read-only copies, not suitable for adding new databases.

This approach ensures efficiency and leverages the existing NDB-managed infrastructure.

NEW QUESTION # 14

A database admin logs into Era to manage an Oracle Database VM and sees a message Update Available on the Status of the Software Profile Version.

What should the database admin do?

- A. Create and update to the latest software profile version
- B. Era automatically updates the software profile to the latest version
- C. Schedule Era to update the software profile to the latest version
- D. Manually update the software profile to the latest version

Answer: D

Explanation:

In Nutanix Database Automation (NCP-DB), when an administrator logs into Era and sees a message "Update Available" on the Status of the Software Profile Version, it indicates that a newer version of the software profile is available¹. The administrator should manually update the software profile to the latest version². This process ensures that the database VM is running the most recent and compatible version of the software².

NEW QUESTION # 15

Which statement best describes what happens when a 3rd-party backup tool is chosen to manage log backups for Microsoft SQL in NDB?

- A. If exclusive log access is not granted to NDB, the Point-in-Time (PIT) recovery will be supported, but snapshot-based recovery of the databases is not supported.
- B. Third-party backup vendors can continue to backup the binary logs from the binary log location. NDB will still be able to capture the logs, considering the log catch-up begins before the logs get purged.
- C. If exclusive log access is not granted to NDB, the Point-in-Time (PIT) recovery will not be supported, but snapshot-based recovery of the databases is supported.
- D. Third-party backup vendors can continue to backup the archived logs from the database log destination. NDB will still be able to capture the logs, considering the log catch-up begins before the logs get backed up

Answer: D

Explanation:

NDB supports two modes of log backup management for Microsoft SQL databases: NDB-managed and 3rd-party managed. In the NDB-managed mode, NDB takes full control of the log backups and stores them in the Cerebro log location. In the 3rd-party managed mode, NDB allows the use of external backup tools to backup the logs from the database log destination. However, NDB still needs to capture the logs for its own operations, such as point-in-time recovery, clone refresh, and log catch-up. Therefore, NDB will periodically scan the database log destination and copy the logs to the Cerebro log location. This process requires that the log catch-up begins before the logs get backed up by the 3rd-party tool, otherwise NDB will miss some logs and the operations will fail. If the 3rd-party tool grants exclusive access to the logs, then NDB will not be able to capture them at all, and the operations will not be supported. References:

NEW QUESTION # 16

Era allows custom metadata to be assigned to entities (clones, time machines, databases, and database servers) by using which component?

- A. Text
- B. Notes
- C. Tags
- D. Index

Answer: C

Explanation:

Nutanix Era allows custom metadata to be assigned to entities (clones, time machines, databases, and database servers) by using Tags. Tags are a component of Nutanix Era that allows users to assign custom metadata to various entities, enhancing the ability to organize, search, and manage these entities within the Era platform.

NEW QUESTION # 17

.....

The software is designed for use on a Windows computer. This software helps hopefuls improve their performance on subsequent attempts by recording and analyzing Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 (NCP-DB) exam results. Like the actual Nutanix NCP-DB certification exam, Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 (NCP-DB) practice exam software has a certain number of questions and allocated time to answer. Any questions or concerns can be directed to the Pass4training support team, who are available 24/7. However, the Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 (NCP-DB) exam questions software product license must be validated before use.
