

Reliable PCCP Test Questions, PCCP Reliable Test Camp

BONUS!!! Download part of TrainingQuiz PCCP dumps for free: https://drive.google.com/open?id=1JvE3cvFx6JyH0qmOI_qULTq4JNGUzQhe

We value every customer who purchases our PCCP test material and we hope to continue our cooperation with you. Our PCCP test questions are constantly being updated and improved so that you can get the information you need and get a better experience. The services provided by our PCCP test questions are quite specific and comprehensive. First of all, our test material comes from many experts. The gold content of the materials is very high, and the updating speed is fast. By our PCCP Exam Prep, you can find the most suitable information according to your own learning needs at any time, and make adjustments and perfect them at any time.

Palo Alto Networks PCCP Exam Syllabus Topics:

Topic	Details
Topic 1	• Network Security: This domain targets a Network Security Specialist and includes knowledge of Zero Trust Network Access (ZTNA) characteristics, functions of stateless and next-generation firewalls (NGFWs), and the purpose of microsegmentation. It also covers common network security technologies such as intrusion prevention systems (IPS), URL filtering, DNS security, VPNs, and SSL • TLS decryption. Candidates must understand the limitations of signature-based protection, deployment options for NGFWs, cybersecurity concerns in operational technology (OT) and IoT, cloud-delivered security services, and AI-powered security functions like Precision AI.
Topic 2	• Cybersecurity: This section of the exam measures skills of a Cybersecurity Practitioner and covers fundamental concepts of cybersecurity, including the components of the authentication, authorization, and accounting (AAA) framework, attacker techniques as defined by the MITRE ATT&CK framework, and key principles of Zero Trust such as continuous monitoring and least privilege access. It also addresses understanding advanced persistent threats (APT) and common security technologies like identity and access management (IAM), multi-factor authentication (MFA), mobile device and application management, and email security.

Topic 3	• Cloud Security: This section targets a Cloud Security Specialist and addresses major cloud architectures and topologies. It discusses security challenges like application security, cloud posture, and runtime security. Candidates will learn about technologies securing cloud environments such as Cloud Security Posture Management (CSPM) and Cloud Workload Protection Platforms (CWPP), as well as the functions of a Cloud Native Application Protection Platform (CNAPP) and features of Cortex Cloud.
Topic 4	• Endpoint Security: This domain is aimed at an Endpoint Security Analyst and covers identifying indicators of compromise (IOCs) and understanding the limits of signature-based anti-malware. It includes concepts like User and Entity Behavior Analytics (UEBA), endpoint detection and response (EDR), and extended detection and response (XDR). It also describes behavioral threat prevention and endpoint security technologies such as host-based firewalls, intrusion prevention systems, device control, application control, disk encryption, patch management, and features of Cortex XDR.

Reliable PCCP Test Questions & Free PDF Quiz Palo Alto Networks Realistic Palo Alto Networks Certified Cybersecurity Practitioner Reliable Test Camp

Living in such a world where competitiveness is a necessity that can distinguish you from others, every one of us is trying our best to improve ourselves in every way. It has been widely recognized that the PCCP exam can better equip us with a newly gained personal skill, which is crucial to individual self-improvement in today's computer era. With the certified advantage admitted by the test Palo Alto Networks certification, you will have the competitive edge to get a favorable job in the global market. Here our PCCP Study Materials are tailor-designed for you.

Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q60-Q65):

NEW QUESTION # 60

Which technology secures software-as-a-service (SaaS) applications and network data, and also enforces compliance policies for application access?

- A. DLP
- **B. CASB**
- C. URL filtering
- D. DNS Security

Answer: B

Explanation:

A Cloud Access Security Broker (CASB) secures SaaS applications and network data by providing visibility, data security, threat protection, and compliance enforcement. It acts as a control point between users and cloud service providers to enforce security policies.

NEW QUESTION # 61

Which feature of cloud-native security platforms (CNSPs) focuses on protecting virtual machine (VM), container, and serverless deployments against application-level attacks during runtime?

- A. Asset inventory
- B. Configuration assessment
- C. Data security
- **D. Workload security**

Answer: D

Explanation:

Workload security in a Cloud-Native Security Platform (CNSP) focuses on protecting VMs, containers, and serverless deployments against application-level attacks during runtime. It ensures that workloads remain secure by monitoring behavior, enforcing policies, and detecting threats in real time.

NEW QUESTION # 62

What are two functions of an active monitoring system? (Choose two.)

- A. Using probes to establish potential load issues
- B. Detecting micro-services in a default configuration
- C. Preventing specific changes from being affected in the system
- D. Determining system health using unaltered system data

Answer: A,D

Explanation:

Determining system health using unaltered system data - Active monitoring collects real-time data to assess the current health and performance of systems.

Using probes to establish potential load issues - Active monitoring uses synthetic transactions or probes to simulate user interactions and identify performance or load-related issues before they affect users.

NEW QUESTION # 63

What are two common lifecycle stages for an advanced persistent threat (APT) that is infiltrating a network? (Choose two.)

- A. Communication with covert channels
- B. Privilege escalation
- C. Lateral movement
- D. Deletion of critical data

Answer: B,C

Explanation:

Lateral movement is a key stage where the attacker moves across the network to find valuable targets.

Privilege escalation involves gaining higher access rights to expand control within the compromised environment.

Communication with covert channels is a tactic used during persistence or exfiltration, while deletion of critical data is not a standard APT lifecycle stage - it's more characteristic of destructive attacks.

NEW QUESTION # 64

Which statement describes a host-based intrusion prevention system (HIPS)?

- A. It scans a Wi-Fi network for unauthorized access and removes unauthorized devices.
- B. It is installed on an endpoint and inspects the device.
- C. It is placed as a sensor to monitor all network traffic and scan for threats.
- D. It analyzes network traffic to detect unusual traffic flows and new malware.

Answer: B

Explanation:

A Host-Based Intrusion Prevention System (HIPS) is installed directly on an endpoint device (such as a server or workstation) and monitors local system activity, including processes, file access, and system calls, to detect and prevent malicious behavior.

NEW QUESTION # 65

.....

We are not satisfied with that we have helped more candidates pass PCCP exam, because we know that the IT industry competition is intense, we must constantly improve our dumps so that we cannot be eliminated. So our technical teams continue to renew the PCCP Study Materials in time, in order to let the examinee using our products to keep up with the PCCP exam reform tightly.
