Salesforce Certified Platform Developer II (PDII) Sample Questions (Q177-Q182):

NEW QUESTION # 177

Universal Containers has an Apex trigger on Account that creates an Account Plan record when an Account is marked as a Customer.

Recently a record-triggered flow was added so that whenever an Account is marked as a Customer, a 'Customer Since' date field is updated with today's date. Since the addition of the flow, two Account Plan records are created whenever the Account is marked as a Customer.

What might cause this to happen?

- A. The flow is configured to evaluate when a record is created and every time it is edited.
- B. The Apex trigger is not bulk safe and calls insert inside of a for loop.
- C. The Apex trigger does not use a static variable to ensure it only fires once.
- D. The flow is configured to use an 'Update Records' element.

Answer: A

Explanation:

If a flow is configured to evaluate when a record is created and every time it's edited, and an Apex trigger also fires upon the same conditions, it could result in duplicate operations. In this case, two Account Plan records are created because both the flow and the trigger execute upon the Account being marked as a Customer.
