Microsoft Power Platform Developer Sample Questions (Q193-Q198):
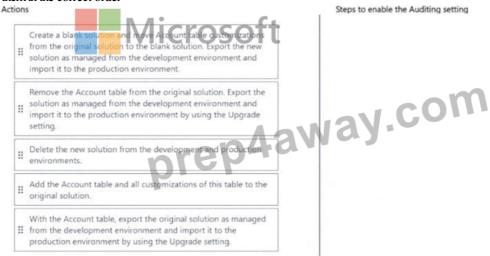

NEW QUESTION # 193
A company manages a Microsoft Power Platform solution that includes an account table.
You enable an Auditing flag in the table and import a managed version of the solution to the production environment.
After the import you observe that the Auditing flag is disabled in the production environment.
You check solution layering of the Account table. You observe that the Fust Party solution customization lays on top of the solution.
You need to enable the Auditing setting.
In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order

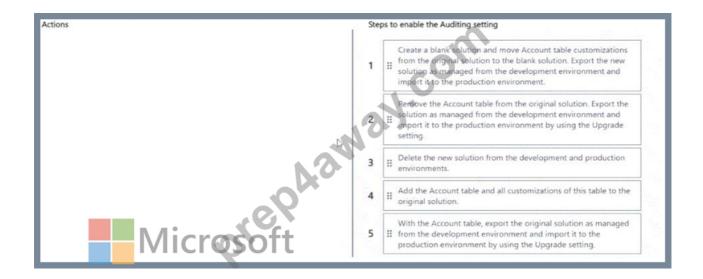

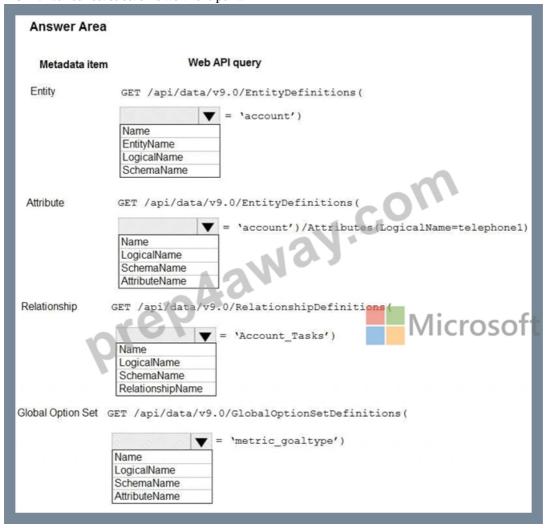

Answer:

Explanation:

Explanation:

Actions		Steps to enable the Auditing setting
	1 ⠿	Create a blank solution and move Account table customizations from the original solution to the blank solution. Export the new solution as managed from the development environment and import it to the production environment.
	2 ⠿	Remove the Account table from the original solution. Export the solution as managed from the development environment and import it to the production environment by using the Upgrade setting.
	3 ⠿	Delete the new solution from the development and production environments.
	4 ⠿	Add the Account table and all customizations of this table to the original solution.
	5 ⠿	With the Account table, export the original solution as managed from the development environment and import it to the production environment by using the Upgrade setting.

NEW QUESTION # 197

A clothing store uses Power Apps apps to interact with customers. Customer data is stored in Microsoft Dataverse.

The store offers discounts for customers. You assign a group discount to all customers in a category. Applicable group discounts are added to any customer-specific discounts. Discount information is stored in the following columns:

| Information type	Column
Group discount	store_groupdiscount
Personal discount	store_personaldiscount
Total discount	store_totaldiscount

If the total discount on an order exceeds 30 percent, a manager must approve the order before the order is fulfilled and delivered.

You need to create a flow that notifies managers when approvals are required.

How should you configure the flow trigger? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
