GetValidTest Google Cloud Certified - Professional Cloud Security Engineer Exam (Professional-Cloud-Security-Engineer) questions in three formats is an invaluable resource for preparing for the Professional-Cloud-Security-Engineer exam and achieving the Google certification. With customizable Professional-Cloud-Security-Engineer practice exams, up-to-date Professional-Cloud-Security-Engineer questions, and user-friendly formats, GetValidTest is the perfect platform for clearing the Google Professional-Cloud-Security-Engineer test. So, try the demo version today and unlock the full potential of GetValidTest Google Cloud Certified - Professional Cloud Security Engineer Exam (Professional-Cloud-Security-Engineer) exam dumps after payment, taking one step closer to your career goals.

You can read the Google Professional Cloud Security Engineer salary

The Average Salary of an Google Professional Cloud Security Engineer salary in

- India - 172784 15215321 INR
- England - 155954 POUND
- Europe - 80853 EURO
- United State - 203393 USD

Interesting Facts that Help you Crack the Tough Google Professional-Cloud-Security-Engineer Exam

Many students often feel that their own gains are not directly proportional to efforts in their process of learning. This is because they have not found the correct method of learning so that they often have low learning efficiency. If you have a similar situation, we suggest you try Professional-Cloud-Security-Engineer practice materials. Professional-Cloud-Security-Engineer test guide is compiled by experts of several industries tailored to Professional-Cloud-Security-Engineer exam to help students improve their learning efficiency and pass the exam in the shortest time. Experts conducted detailed analysis of important test sites according to the examination outline, and made appropriate omissions for unimportant test sites. At the same time, Professional-Cloud-Security-Engineer Exam Dump made a detailed description of all the incomprehensible knowledge points through examples, forms, etc., so that everyone can easily understand.

Target Audience

The potential candidates for this certification are the Cloud security engineers who have proficiency in different areas of Cloud Security. They include the definition of organizational policies and structures as well as management of identity & access with the use of the Google technologies to offer data protection. Besides that, they should also have the skills in network security defense configuration, collection and analysis of Google management of incident responses, and the understanding of regulatory issues.

Google Professional-Cloud-Security-Engineer Certification Exam is intended for individuals who have prior experience in cloud security, and who are looking to enhance their skills and knowledge in securing cloud-based solutions. Professional-Cloud-Security-Engineer exam is designed to test the candidate's ability to design and implement secure infrastructure and platforms in the Google Cloud environment, as well as their knowledge of best practices for data protection, identity management, network security, and compliance.

Google Cloud Certified - Professional Cloud Security Engineer Exam Sample Questions (Q211-Q216):

NEW QUESTION # 211

A customer's company has multiple business units. Each business unit operates independently, and each has their own engineering group. Your team wants visibility into all projects created within the company and wants to organize their Google Cloud Platform (GCP) projects based on different business units. Each business unit also requires separate sets of IAM permissions. Which strategy should you use to meet these needs?

- A. Establish standalone projects for each business unit, using gmail.com accounts.
- **B. Create an organization node, and assign folders for each business unit.**
- C. Assign GCP resources in a VPC for each business unit to separate network access.
- D. Assign GCP resources in a project, with a label identifying which business unit owns the resource.

Answer: B

NEW QUESTION # 212

Your organization recently activated the Security Command Center {SCO standard tier. There are a few Cloud Storage buckets that were accidentally made accessible to the public. You need to investigate the impact of the incident and remediate it. What should you do?

- A. * 1 Remove the Identity and Access Management (IAM) granting access to all users from the buckets
* 2 Apply the organization policy storage. unifiromBucketLevelAccess to prevent regressions
* 3 Query the data access logs to report on unauthorized access
- B. * 1 Change permissions to limit access for authorized users
* 2 Enforce a VPC Service Controls perimeter around all the production projects to immediately stop any unauthorized access
* 3 Review the administrator activity audit logs to report on any unauthorized access
- **C. * 1 Change bucket permissions to limit access**
* 2 Query the data access audit logs for any unauthorized access to the buckets

* 3 After the misconfiguration is corrected mute the finding in the Security Command Center

- D. * 1 Change the bucket permissions to limit access
- * 2 Query the buckets usage logs to report on unauthorized access to the data
- * 3 Enforce the organization policy storage.publicAccessPrevention to avoid regressions

Answer: C

NEW QUESTION # 213

A website design company recently migrated all customer sites to App Engine. Some sites are still in progress and should only be visible to customers and company employees from any location.

Which solution will restrict access to the in-progress sites?

- A. Create an App Engine firewall rule that allows access from the customer and employee networks and denies all other traffic.
- B. Upload an .htaccess file containing the customer and employee user accounts to App Engine.
- C. Use Cloud VPN to create a VPN connection between the relevant on-premises networks and the company's GCP Virtual Private Cloud (VPC) network.
- D. Enable Cloud Identity-Aware Proxy (IAP), and allow access to a Google Group that contains the customer and employee user accounts.

Answer: D

Explanation:

Cloud Identity-Aware Proxy (IAP) allows you to control access to your web applications running on Google Cloud. It ensures that only authenticated users who are part of a specified Google Group can access the application. Here's how you can restrict access to in-progress sites using IAP:

Enable IAP: First, you need to enable Cloud IAP for your App Engine application. This will require configuring OAuth consent and setting up necessary permissions.

Create a Google Group: Create a Google Group that includes all the customers and company employees who should have access to the in-progress sites.

Configure Access: Configure IAP to allow access only to members of the created Google Group. This involves setting up the necessary IAP policies and ensuring that only authenticated users in the group can access the application.

By using IAP, you ensure that the access control is centrally managed and only authorized users can view the in-progress sites from any location.
