NEW QUESTION # 45
An administrator needs to create a backup of a Portworx volume in an AWS S3 bucket and has already configured the secrets so Portworx can connect to the AWS S3 bucket.
What command is needed to create the backup?

- A. pxctl credentials create -provider s3 -s3-access-key <AccessKey> -s3-secret-key <secretKey> -s3-region us-east-1 -s3-endpoint s3.amazonaws.com -bucket <bucket-name> <credentials-name>
- B. pxctl volume snapshot create -name <snapshot-name> <volume-name>
- C. pxctl cloudsnap backup <volumename> -cred-id <credentials-name>

Answer: C

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
After configuring credentials for AWS S3 object storage, the administrator uses the command pxctl cloudsnap backup <volumename> -cred-id <credentials-name> to create a cloud snapshot backup of a Portworx volume. This command instructs Portworx to take a point-in-time snapshot of the specified volume and upload it securely to the configured S3 bucket using the referenced credentials. The command leverages Portworx's cloud snapshot feature for disaster recovery and long-term retention. Option B relates to creating credentials and is not the backup command. Option C creates a local snapshot but does not back it up to the cloud. The Portworx CLI documentation highlights pxctl cloudsnap backup as the core method to perform backups to cloud object storage, enabling data protection strategies aligned with cloud-native architectures【Pure Storage Portworx Cloud Snapshot Guide source】.

NEW QUESTION # 46
When updating the Portworx StorageCluster object to mount the SSL certificate secret, which path should be specified for the AWS_CA_BUNDLE environment variable?

- A. /opt/certs/objectstore.pem
- B. /etc/pwx/objectstore-cert/objectstore.pem
- C. /etc/pwx/objectstore-cert/px-s3-certs

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
When configuring Portworx to communicate securely with an AWS S3-compatible Object Store using custom SSL certificates, the AWS_CA_BUNDLE environment variable must point to the mounted certificate file location. The correct path for this in the StorageCluster spec is /opt/certs/objectstore.pem. This file contains the Certificate Authority (CA) bundle trusted by Portworx to validate TLS connections to the object store. Ensuring this path is correctly specified and the certificate secret properly mounted is critical to prevent TLS handshake failures and enable secure communication. Portworx documentation and configuration samples specify /opt/certs/objectstore.pem as the standard path for the CA bundle within Portworx containers when integrating with custom or private certificate authorities【Pure Storage Portworx Security Guide source】.

NEW QUESTION # 47

How do you label a Kubernetes node to provide rack information to Portworx?

- A. kubectl label nodes px/rack=
- B. kubectl taint nodes px/rack=
- C. kubectl annotate nodes px/rack=

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Labeling Kubernetes nodes with rack information is achieved using the kubectl label nodes command. The syntax would be something like kubectl label nodes <node-name> px/rack=<rack-identifier>. This label allows Portworx to understand the physical or logical topology of nodes, enabling placement strategies that optimize data locality, fault tolerance, and availability based on rack awareness. Taints and annotations serve different purposes; taints affect pod scheduling by repelling pods, while annotations provide metadata without influencing scheduling. Portworx uses node labels extensively for topology-aware volume placement and disaster recovery planning. Official Portworx documentation recommends labeling nodes with topology identifiers like rack or zone to enable advanced placement strategies and maintain application resiliency in distributed environments【Pure Storage Portworx Placement Guide source】.

NEW QUESTION # 48

What feature does a Portworx StorageClass provide to Kubernetes storage?

- A. Automated storage provisioning
- B. Automated monitoring
- C. Automated backups

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
In Kubernetes, StorageClasses define how persistent volumes are dynamically provisioned. A Portworx StorageClass enables automated provisioning of Portworx volumes in response to Persistent Volume Claim (PVC) requests. This eliminates the need for administrators to manually create volumes, improving agility and scalability. The StorageClass encapsulates volume parameters such as replication factor, encryption, and IO profiles, ensuring consistent storage policies across deployments. While Portworx offers monitoring and backup capabilities, these are outside the scope of the StorageClass resource itself. Kubernetes and Portworx documentation detail the StorageClass as a critical abstraction for enabling self-service storage provisioning, allowing applications to request storage with specific attributes dynamically and Portworx to satisfy these requests seamlessly【Pure Storage Portworx Kubernetes Guide source】.

NEW QUESTION # 49

What is the minimum Stork version required to perform an Application Backup?

- A. Stork 23.3.0
- B. Stork 2.3
- C. Any Stork version works

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Stork version 2.3 is the minimum version required to support Application Backup features in Portworx. Application Backup allows for consistent snapshots and restores of complex, multi-volume, and multi-pod stateful applications. This capability depends on enhancements introduced in Stork 2.3 that enable application-aware backup orchestration, coordination between Kubernetes and storage layers, and integration with backup policies. Earlier Stork versions lack these features, making them unsuitable for application-level backups. Portworx release notes and Stork documentation confirm that version 2.3 introduced key functionalities that underpin the reliable backup and restore workflows for stateful workloads, making it a baseline requirement for disaster recovery and business continuity implementations involving application backups【Pure Storage Portworx Backup Docs source】.
