The cost of the exam varies depending on the country and region.

CompTIA Server+ Certification Exam Sample Questions (Q268-Q273):

NEW QUESTION # 268

Which of the following symbols is used to write a text description per line within a PowerShell script?

- A. @
- B. #
- C. &
- D. %

Answer: B

Explanation:

The # symbol is used to write a text description per line within a PowerShell script. A text description is also known as a comment, which is a line of code that is ignored by the PowerShell interpreter and serves as documentation or explanation for human readers. The # symbol indicates that everything following it on the same line is a comment and not part of the script commands or expressions. For example:

This is a comment in PowerShell

Write-Host "Hello World" # This command prints Hello World to the console

NEW QUESTION # 269

Users at a company work with highly sensitive data

a. The security department implemented an administrative and technical control to enforce least-privilege access assigned to files. However, the security department has discovered unauthorized data exfiltration. Which of the following is the BEST way to protect the data from leaking?

- A. Install a DLP solution.
- B. Enforce the lock-screen feature.
- C. Implement disk quotas.
- D. Utilize privacy screens.

Answer: A

Explanation:

Components of a Data Loss Solution

Reference:

The best way to protect the data from leaking is to install a DLP solution. A DLP (Data Loss Prevention) solution is a software that helps businesses prevent confidential data from being leaked or stolen by unauthorized parties. A DLP solution can identify, monitor, and protect data as it moves across networks and devices, such as endpoints, email, web, cloud applications, or removable media. A DLP solution can also enforce security policies based on content and context for data in use, in motion, and at rest. A DLP solution can detect and prevent data breaches by using various techniques, such as content inspection, contextual analysis, encryption, blocking, alerting, warning, quarantining, or other remediation actions.

NEW QUESTION # 270

An administrator is configuring a host-based firewall for a server. The server needs to allow SSH, FTP, and LDAP traffic. Which of the following ports must be configured so this traffic will be allowed? (Select THREE).

- A. 0
- B. 1
- C. 2
- D. 3
- E. 4
- F. 5
- G. 6
- H. 7

Answer: A,C,E

NEW QUESTION # 271

A company stores extremely sensitive data on an alt-gapped system. Which of the following can be implemented to increase security against a potential insider threat?

- A. SIEM

- B. Two-person Integrity
- C. Faraday cage
- D. SSO
- E. MFA

Answer: B

NEW QUESTION # 272

A technician is connecting a server's secondary NIC to a separate network. The technician connects the cable to the switch but then does not see any link lights on the NIC. The technician confirms there is nothing wrong on the network or with the physical connection. Which of the following should the technician perform NEXT?

- A. Enable the port on the server
- B. Restart the server
- C. Check the DHCP configuration
- D. Configure the network on the server

Answer: A

Explanation:

Explanation

The next thing that the technician should perform is to enable the port on the server. A port is a logical endpoint that identifies a specific service or application on a network device. A port can be enabled or disabled depending on whether the service or application is running or not. If a port is disabled on a server, it means that the server cannot send or receive any network traffic on that port, which can prevent communication with other devices or services that use that port. In this case, if port 389 is disabled on the server, it means that the server cannot use LDAP to access or modify directory services over a network. To resolve this issue, the technician should enable port 389 on the server using commands such as netsh or iptables.

NEW QUESTION # 273
