To gain a full understanding of our product please firstly look at the introduction of the features and the functions of our SPLK-1002 exam torrent. The page of our product provide the demo and the aim to provide the demo is to let the you understand part of our titles before their purchase and see what form the software is after the you open it. The client can visit the page of our product on the website. So the client can understand our SPLK-1002 Quiz torrent well and decide whether to buy our product or not at their wishes. The client can see the forms of the answers and the titles.

Earning the Splunk SPLK-1002 Certification demonstrates that the individual is proficient in using Splunk and can handle advanced Splunk deployment scenarios. It also showcases the individual's ability to work with other IT professionals to ensure that Splunk deployments are optimized for performance and reliability. With the increasing demand for Splunk in the industry, obtaining this certification can open up new career opportunities and increase earning potential.

Splunk Core Certified Power User Exam Sample Questions (Q240-Q245):

NEW QUESTION # 240

Two separate results tables are being combined using the join command. The outer table has the following values:

email	employeeNumber
jsmith@acme.com	1
mcarpenter@acme.com	2
jrogers@acme.com	3
bsparrow@acme.com	4
eripper@acme.com	5

The inner table has the following values:

employeeNumber	firstName	lastName
1	John	Smith
2	Mary	Carpenter
3	Jeff	Rogers

The line of SPL used to join the tables is: join employeeNumber type=outer How many rows are returned in the new table?

- A. Eight
- **B. Five**
- C. Three
- D. Zero

Answer: B

Explanation:

In this case, the outer join is applied, which means that all rows from the outer (left) table will be included, even if there are no matching rows in the inner (right) table. The result will include all five rows from the outer table, with the matched data from the inner table where employeeNumber matches. Rows without matching employeeNumber values will have null values for the fields from the inner table.

NEW QUESTION # 241

Which of the following statements about data models and pivot are true? (select all that apply)

- A. They are both knowledge objects.
- B. Data models are created out of datasets called pivots.
- C. Pivot requires users to input SPL searches on data models.
- **D. Pivot allows the creation of data visualizations that present different aspects of a data model.**

Answer: D

NEW QUESTION # 242

When can a pipe follow a macro?

- A. A pipe may always follow a macro.
- B. Only when sharing is set to global for the macro.
- C. The macro must be defined in the current app.
- D. The current user must own the macro.

Answer: A

Explanation:

Explanation

A macro is a way to save a segment of a search string as a variable and reuse it in other searches². A macro can be followed by a pipe, which is a symbol that separates commands in a search pipeline². A pipe may always follow a macro, regardless of who owns the macro, where the macro is defined or how the macro is shared². For example, if you have a macro called `us_sales` that returns events from the US region, you can use it in a search like this: `us_sales | stats sum(price) by product`². This search will use the macro to filter the events and then calculate the total price for each product². Therefore, option A is correct, while options B, C and D are incorrect because they are not conditions that affect whether a pipe can follow a macro.

NEW QUESTION # 243

When multiple event types with different color values are assigned to the same event, what determines the color displayed for the event?

- A. Priority
- B. Weight
- C. Rank
- D. Precedence

Answer: A

Explanation:

Explanation/Reference: <https://docs.splunk.com/Documentation/SplunkCloud/8.0.2003/Knowledge/Defineeventtypes>

NEW QUESTION # 244

Why are tags useful in Splunk?

- A. Tags visualize data with graphs and charts.
- B. Tags group related data together.
- C. Tags add fields to the raw event data.
- D. Tags look for less specific data.

Answer: B

Explanation:

Tags are a type of knowledge object that enable you to assign descriptive keywords to events based on the values of their fields. Tags can help you to search more efficiently for groups of event data that share common characteristics, such as functionality, location, priority, etc. For example, you can tag all the IP addresses of your routers as `router`, and then search for `tag=router` to find all the events related to your routers. Tags can also help you to normalize data from different sources by using the same tag name for equivalent field values. For example, you can tag the field values `error`, `fail`, and `critical` as `severity=high`, and then search for `severity=high` to find all the events with high severity level²
