## TOP Reliable SPLK-2002 Real Test 100% Pass | The Best Splunk Enterprise Certified Architect Pass Leader Dumps Pass for sure

Our SPLK-2002 study materials cover three versions, they can meet all your needs. You can choose differet versions according to your own needs. SPLK-2002 PDF materilas is instant access to downlod,if you like, it can be transformed into a paper version, you can put it into your bags. SPLK-2002 Soft test engine and SPLK-2002 oline test engine are also can be you choice, SPLK-2002 online test engine using the online tool and it can also provide the record for your process, and SPLK-2002 online test engine can practice online anytime. If you have the nees like this, just choose us.

## Splunk Enterprise Certified Architect Sample Questions (Q56-Q61):

### NEW QUESTION # 56

Which of the following will cause the greatest reduction in disk size requirements for a cluster of N indexers running Splunk Enterprise Security?

- A. Setting the cluster replication factor to N-1.
- B. Setting the cluster search factor to N-1.
- C. Increasing the number of buckets per index.
- D. Decreasing the data model acceleration range.

**Answer: A**

### NEW QUESTION # 57

Which two sections can be expanded using the Search Job Inspector?

- A. Saved search history.
- B. Optimization suggestions.
- C. Search job properties.
- D. Execution costs.

**Answer: A,C**

### NEW QUESTION # 58

Which command will permanently decommission a peer node operating in an indexer cluster?

- A. splunk decommission --enforce counts
- B. splunk stop -f
- C. splunk offline -f
- D. splunk offline --enforce-counts

**Answer: D**

Explanation:

Explanation

The splunk offline --enforce-counts command will permanently decommission a peer node operating in an indexer cluster. This command will remove the peer node from the cluster and delete its data. This command should be used when the peer node is no longer needed or is being replaced by another node. The splunk stop

-f command will stop the Splunk service on the peer node, but it will not decommission it from the cluster.

The splunk offline -f command will take the peer node offline, but it will not delete its data or enforce the replication and search factors. The splunk decommission --enforce-counts command is not a valid Splunk command. For more information, see Remove a peer node from an indexer cluster in the Splunk documentation.

### NEW QUESTION # 59

Configurations from the deployer are merged into which location on the search head cluster member?

- A. SPLUNK\_HOME/etc/apps/APP\_HOME/default
- B. SPLUNK\_HOME/etc/apps/search/default
- C. SPLUNK\_HOME/etc/apps/APP\_HOME/local
- D. SPLUNK\_HOME/etc/system/local

**Answer: C**

Explanation:

Configurations from the deployer are merged into the SPLUNK\_HOME/etc/apps/APP\_HOME/local directory on the search head cluster member. The deployer distributes apps and other configurations to the search head cluster members in the form of a configuration bundle. The configuration bundle contains the contents of the SPLUNK\_HOME/etc/shcluster/apps directory on the deployer. When a search head cluster member receives the configuration bundle, it merges the contents of the bundle into its own SPLUNK\_HOME/etc/apps directory. The configurations in the local directory take precedence over the configurations in the default directory. The SPLUNK\_HOME/etc/system/local directory is used for system-level configurations, not app-level configurations. The SPLUNK\_HOME/etc/apps/search/default directory is used for the default configurations of the search app, not the configurations from the deployer.

### NEW QUESTION # 60

Which of the following is a good practice for a search head cluster deployer?

- A. The deployer only distributes configurations to search head cluster members with splunk apply shcluster-bundle.
- B. The deployer must distribute configurations to search head cluster members to be valid configurations.
- C. The deployer only distributes configurations to search head cluster members when they "phone home".
- D. The deployer must be used to distribute non-replicable configurations to search head cluster members.

**Answer: D**

Explanation:

Explanation

The following is a good practice for a search head cluster deployer: The deployer must be used to distribute non-replicable configurations to search head cluster members. Non-replicable configurations are the configurations that are not replicated by the search factor, such as the apps and the server.conf settings. The deployer is the Splunk server role that distributes these configurations to the search head cluster members, ensuring that they have the same configuration. The deployer does not only distribute configurations to search head cluster members when they "phone home", as this would cause configuration inconsistencies and delays.

The deployer does not distribute configurations to search head cluster members to be valid configurations, as this implies that the configurations are invalid without the deployer. The deployer does not only distribute configurations to search head cluster members with splunk apply shcluster-bundle, as this would require manual intervention by the administrator. For more information, see Use the deployer to distribute apps and configuration updates in the Splunk documentation.

## NEW QUESTION # 61

.....

In order to pass the Splunk SPLK-2002 Exam, selecting the appropriate training tools is very necessary. And the study materials of Splunk SPLK-2002 exam is a very important part. PassLeaderVCE can provide valid materials to pass the Splunk SPLK-2002 exam. The IT experts in PassLeaderVCE are all have strength and experience. Their research materials are very similar with the real exam questions. PassLeaderVCE is a site that provide the exam materials to the people who want to take the exam and we can help the candidates to pass the exam effectively.
