## Palo Alto Networks Security Service Edge Engineer Sample Questions (Q41-Q46):

#### NEW QUESTION # 41

What is the impact of selecting the "Disable Server Response Inspection" checkbox after confirming that a Security policy rule has a threat protection profile configured?

- A. The threat protection profile will override the 'Disable Server Response Inspection' only for HTTP traffic from the server to the client.
- **B. All traffic from the server to the client will bypass threat inspection.**
- C. Only HTTP traffic from the server to the client will bypass threat inspection.
- D. The threat protection profile will override the 'Disable Server Response Inspection' for all traffic from the server to the client.

**Answer: B**

Explanation:

Selecting the "Disable Server Response Inspection" checkbox means that traffic flowing from the server to the client will not be inspected for threats, even if a threat protection profile is applied to the Security policy rule. This setting can reduce processing overhead but may expose the network to threats embedded in server responses, such as malware or exploits.

#### NEW QUESTION # 42

How can role-based access control (RBAC) for Prisma Access (Managed by Strata Cloud Manager) be used to grant each member of a security team full administrative access to manage the Security policy in a single tenant while restricting access to other tenants in a multitenant deployment?

- A. Add the team to the Parent Tenant, select the Prisma Access Configuration Scope, and set the role to Security Administrator.
- B. Add the team to the Parent Tenant, select Prisma Access & NGFW Configuration, and set the role to Security Administrator.
- **C. Add the team to the Child Tenant, select Prisma Access & NGFW Configuration, and set the role to Security Administrator.**
- D. Add the team to the Child Tenant, select All Apps & Services, and set the role to Security Administrator.

**Answer: C**

Explanation:

In a multitenant deployment, access control must be configured at the Child Tenant level to ensure that security administrators have full control over Security policy only within their assigned tenant while restricting access to other tenants. By selecting Prisma Access & NGFW Configuration, the assigned users gain full administrative access only for security policy management within the designated tenant, aligning with RBAC best practices for controlled access in Prisma Access Managed by Strata Cloud Manager.

#### NEW QUESTION # 43

Which overlay protocol must a customer premises equipment (CPE) device support when terminating a Partner Interconnect-based Colo-Connect in Prisma Access?

- **A. IPSec**
- B. Geneve
- C. DTLS
- D. GRE

**Answer: A**

Explanation:

When terminating a Partner Interconnect-based Colo-Connect in Prisma Access, the Customer Premises Equipment (CPE) must support IPSec as the overlay protocol. Prisma Access establishes secure IPSec tunnels between the Colo-Connect infrastructure and the CPE, ensuring encrypted communication and reliable connectivity. IPSec provides secure site-to-cloud integration, enabling customers to extend their private network securely over the Prisma Access infrastructure.

#### NEW QUESTION # 44

All mobile users are unable to authenticate to Prisma Access (Managed by Strata Cloud Manager) using SAML authentication

through the Cloud Identity Engine. Users report that after entering their credentials on the Identity Provider (IdP) login page, they are redirected to the Prisma Access portal without successful authentication, and they receive this error message:  
Error: Prisma Access Portal Authentication Failed using CIE-SAML with message "400 Bad Request" Which action will identify the root cause of this error?

- A. Verify the SAML metadata configuration in both Strata Cloud Manager and the IdP portal to confirm that the endpoint URLs and certificates are correctly configured.
- **B. Verify the SAML metadata configuration in both the Cloud Identity Engine and the IdP portal to confirm that the endpoint URLs and certificates are correctly configured.**
- C. Review the Authentication logs in Strata Cloud Manager to check for any SAML error messages or authentication failures.
- D. Examine the Security policy rules in Prisma Access to ensure that traffic from the IdP is allowed and not blocked.

**Answer: B**

Explanation:

The "400 Bad Request" error when attempting SAML authentication through the Cloud Identity Engine (CIE) suggests a misconfiguration in the SAML metadata. This typically occurs when the endpoint URLs, certificates, or entity IDs do not match between Cloud Identity Engine and the IdP portal. To resolve this, verify that:

The SAML metadata uploaded to Cloud Identity Engine matches the configuration from the IdP.

pdfbraindumps.com

The ACS (Assertion Consumer Service) URL, Entity ID, and certificate are correctly set.

pdfbraindumps.com

There are no incorrect or expired certificates in the Cloud Identity Engine and IdP configuration.

pdfbraindumps.com

By ensuring the SAML metadata is properly configured in both systems, authentication should proceed without errors.

#### NEW QUESTION # 45

An engineer has configured a Web Security rule that restricts access to certain web applications for a specific user group. During testing, the rule does not take effect as expected, and the users can still access blocked web applications. What is a reason for this issue?

- A. The rule was created at a lower level in the rule hierarchy, giving priority to a higher-level rule.
- B. The rule was created at a higher level in the rule hierarchy, giving priority to a lower-level rule.

- C. The rule was created with improper threat management settings.
- D. The rule was created in the wrong scope, affecting only GlobalProtect users instead of all users.

**Answer: A**

Explanation:

Prisma Access applies security rules in a hierarchical order, where rules at higher levels take precedence over those at lower levels. If a more permissive rule is placed higher in the hierarchy, it may allow traffic before the restrictive Web Security rule is evaluated. To resolve this, the engineer should reorder the rules to ensure the restrictive Web Security rule is positioned higher in the hierarchy so it is applied before any broader or conflicting rules.
