Pass Guaranteed 2025 Trustable Lpi Reliable Test 101-500 Test

Elaborately designed and developed 101-500 test guide as well as good learning support services are the key to assisting our customers to realize their dreams. Our 101-500 study braindumps have a variety of self-learning and self-assessment functions to detect learners' study outcomes, and the statistical reporting function of our 101-500 test guide is designed for students to figure out their weaknesses and tackle the causes, thus seeking out specific methods dealing with them. Our 101-500 exam guide have also set a series of explanation about the complicated parts certificated by the syllabus and are based on the actual situation to stimulate exam circumstance in order to provide you a high-quality and high-efficiency user experience. In addition, the 101-500 Exam Guide function as a time-counter, and you can set fixed time to fulfill your task, so that promote your efficiency in real test. The key strong-point of our 101-500 test guide is that we impart more important knowledge with fewer questions and answers, with those easily understandable 101-500 study braindumps, you will find more interests in them and experience an easy learning process.

Lpi LPIC-1 Exam 101, Part 1 of 2, version 5.0 Sample Questions (Q103-Q108):

NEW QUESTION # 103

What happens after issuing the command `vi` without any additional parameters?

- A. `vi` starts and opens a new file which is filled with the content of the `vi` buffer if the buffer contains text.
- **B. `vi` starts in command mode and opens a new empty file.**
- C. `vi` exits with an error message as it cannot be invoked without a file name to operate on.
- D. `vi` starts and loads the last file used and moves the cursor to the position where `vi` was when it last exited.
- E. `vi` starts and requires the user to explicitly either create a new or load an existing file.

Answer: B

Explanation:

Explanation

The `vi` command is a text editor that operates in two modes: command mode and insert mode. Command mode is used to enter commands to manipulate the text, such as saving, quitting, copying, pasting, etc. Insert mode is used to enter text into the file. When the `vi` command is invoked without any additional parameters, it starts in command mode and opens a new empty file. To enter text, the user has to press `i` to switch to insert mode. To return to command mode, the user has to press `Esc`. To save and quit, the user has to enter `:wq` in command mode. The other options are either incorrect or not applicable. The `vi` command does not load the last file used or the content of the `vi` buffer by default. It also does not require the user to explicitly create or load a file. It does not exit with an error message unless there is a problem with the terminal or the system. References:

NEW QUESTION # 104

In Bash, inserting `2>&1` after a command redirects:

- **A. standard error to standard output.**
- B. standard output to standard input.
- C. standard error to standard input.
- D. standard input to standard error.
- E. standard output to standard error.

Answer: A

Explanation:

Explanation

When piping the output of `find` to the `xargs` command, the option to `find` that is useful if the filenames have spaces in them is `-print0`. The `-print0` option prints the full file name on the standard output (STDOUT), followed by a null character, instead of a newline. This allows the `xargs` command to use the `-0` option to read items from the standard input (STDIN) delimited by null characters, instead of spaces or newlines. This way, filenames with spaces are not split into separate arguments. For example, `find . -name '*.txt' -print0 | xargs -0 grep "hello"` will find all the text files in the current directory and its subdirectories that contain the word `hello`, even if the filenames have spaces in them. The `-rep-space`, `-nospace`, and `-ignore-space` options are not valid options for the `find` command. NEW QUESTION # 105

Which of the following commands will produce the following output?

```
USER  PID  %CPU  MEM  VSZ   RSS   TTY   STAT  START  TIME  COMMAND
root  1255  4.4    0.9   60716 34824  tty7   Ss+   09:25  19:04  /usr/bin/X :0 -
root  2016  0.0    0.0   1792  560   tty1   Ss+   09:26  0:00  /sbin/getty -8
matt  5204  0.0    0.1   6320  3696  pts/4   Ss   13:12  0:00  bash
matt  5219  0.0    0.0   3988  1624  pts/4   Ss+  13:12  0:00  man bash
matt  5229  0.0    0.0   3584  1980  pts/4   Ss+  13:12  0:00  pager -s
matt  6768  0.0    0.1  10504 3880  pts/2   Ss+  15:11  0:00  vi README.txt
```

- A. `jobs`
- **B. `ps`**
- C. `netstat`
- D. `proclist`

Answer: B

NEW QUESTION # 106

How is a symbolic link called bar.conf pointing to foo.conf created?

- A. ln foo.conf bar.conf
- B. ln bar.conf foo.conf
- C. ln -s foo.conf bar.conf
- D. ln -s bar.conf foo.conf

Answer: C

Explanation:

To create a symbolic link, also known as a symlink or a soft link, you need to use the ln command with the -s option. The syntax of the ln command is:

ln -s target link

The target is the file or directory that the link will point to, and the link is the name of the link. The link can be either an absolute or a relative path. If the link is omitted, the link will have the same name as the target in the current directory.

In this question, the target is foo.conf and the link is bar.conf. Therefore, the correct command to create a symbolic link called bar.conf pointing to foo.conf is:

ln -s foo.conf bar.conf

This command will create a file named bar.conf in the current directory, which will point to the file foo.conf in the same directory. If you want to specify a different directory for the target or the link, you need to provide the full path. For example, if you want to create a symbolic link called bar.conf in the /etc directory, pointing to the file foo.conf in the /home/user directory, you need to run:

ln -s /home/user/foo.conf /etc/bar.conf

The other options are not correct because:

* B. ln foo.conf bar.conf: This command will create a hard link, not a symbolic link. A hard link is a direct reference to the physical location of a file on the disk, not a path to another file or directory. A hard link cannot point to a directory, and it cannot cross different filesystems or partitions. A hard link shares the same inode number as the original file, and it is indistinguishable from the original file. A symbolic link has its own inode number, and it is a separate file that points to the target file or directory.

* C. ln -s bar.conf foo.conf: This command will create a symbolic link called foo.conf pointing to bar.conf, which is the opposite of what the question asks. The order of the arguments matters when using the ln command. The first argument is the target, and the second argument is the link.

* D. ln bar.conf foo.conf: This command is not valid because it is missing a space between the target and the link. The ln command requires two separate arguments for the target and the link, separated by a space. If you run this command, you will get an error message saying:

ln: failed to access 'bar.conffoo.conf': No such file or directory

NEW QUESTION # 107

Which of the following commands lists the dependencies of the RPM package file foo.rpm?

- A. rpm -ld foo.rpm
- B. rpm -R foo.rpm
- C. rpm -qpR foo.rpm
- D. rpm -dep foo
- E. rpm -pD foo

Answer: C

NEW QUESTION # 108

.....

TorrentValid's Lpi exam practice test content is tested and approved by the best industry experts and is constantly updated to meet the requirements of the actual 101-500 exam questions. TorrentValid reputation is established particularly with an outstanding success rate of 99.1%. This boosts up our popularity graph among the ambitious professionals who want to enrich their profiles with

the most prestigious 101-500 certifications. Above all, your success is ensured with 100% TorrentValid money back guarantee. If our 101-500 test dumps do not help you pass exam paper, we shall refund your money in full.
