Reliable VMware 2V0-11.25 Study Notes & Exam 2V0-11.25 Objectives Pdf

So many of our worthy customers have achieved success not only on the career but also on the life style due to the help of our 2V0-11.25 study guide. You can also join them and learn our 2V0-11.25 learning materials. You will gradually find your positive changes after a period of practices. Then you will finish all your tasks excellently. You will become the lucky guys if there has a chance. Our 2V0-11.25 Exam Braindumps are waiting for you to have a try.

With over a decade's endeavor, our 2V0-11.25 practice materials successfully become the most reliable products in the industry. There is a great deal of advantages of our 2V0-11.25 exam questions you can spare some time to get to know. You can visit our website, and chat with our service online or via email at any time for we are working 24/7 online. Or you can free download the demos of our 2V0-11.25 learning guide on our website, just click on the buttons, you can reach whatever you want to know.

Exam VMware 2V0-11.25 Objectives Pdf, Exam 2V0-11.25 Assessment

VMware Cloud Foundation 5.2 Administrator study questions provide free trial service for consumers. If you are interested in 2V0-11.25 exam material, you only need to enter our official website, and you can immediately download and experience our trial PDF file for free. Through the trial you will have different learning experience, you will find that what we say is not a lie, and you will immediately fall in love with our products. As a key to the success of your life, the benefits that 2V0-11.25 Exam Guide can bring you are not measured by money. 2V0-11.25 exam guide can not only help you pass the exam, but also help you master a new set of learning methods and teach you how to study efficiently, 2V0-11.25 exam material will lead you to success.

VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details

Topic 1	• VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.
Topic 2	• IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.
Topic 3	• Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.
Topic 4	• Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.
Topic 5	• Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network • storage design.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q157-Q162):

NEW QUESTION # 157
Which two SDDC Manager operations can be executed on an NSX Edge cluster after it has been deployed?
(Choose two.)

- A. Shrink
- B. Delete
- C. |Sync
- D. Redeploy
- E. Expand

Answer: B,C

Explanation:
After an NSX Edge cluster has been deployed, you can perform a sync operation to ensure the NSX Edge cluster is in sync with the configuration in SDDC Manager.
Deleting an NSX Edge cluster can be done after it has been deployed if it is no longer required or needs to be removed from the environment.

NEW QUESTION # 158

Following an update to the Information Security policy, an administrator has been reviewing the status SSL certificates within the VMware Cloud Foundation (VCF) solution.

The new Information Security Policy states:

All SSL certificates must be generated and signed from the shared Microsoft Certificate Authority (CA).

The administrator has discovered the following:

All Aria Suite Components already use CA-signed Subject Alternate Name (SAN) SSL certificates.

All other VCF-based SSL certificates are either self-signed or generated using the VMware Certificate Authority (VMCA).Which three steps must the administrator take to ensure the VCF solution remains compliant and managed by SDDC Manager? (Choose three.)

- A. In SDDC Manager, replace the SSL certificates for vCenter, NSX Manager, SDDC Manager and Aria Suite Lifecycle.
- B. In VMware vCenter, replace the ESXi SSL certificates.
- C. Integrate the Microsoft CA into SDDC Manager.
- D. Integrate the OpenSSL CA into SDDC Manager.
- E. In Aria Suite Lifecycle, replace the VMware Identity Manager, Aria Automation, Aria Operations and Aria Operations for Logs SSL certificates.
- F. In SDDC Manager, replace the SSL certificates for vCenter, ESXi, NSX Manager, SDDC Manager and Aria Suite Lifecycle.

Answer: A,C,F

Explanation:
As per theVMware Cloud Foundation Administration Guide, the official and supported process for moving all solution certificates under a Microsoft Certificate Authority, while keeping management and lifecycle operations compliant with SDDC Manager, is as follows:

C). Integrate the Microsoft CA into SDDC Manager.Exact Extract:

"To replace SSL certificates for VMware Cloud Foundation components using SDDC Manager, you must first integrate your Microsoft CA with SDDC Manager. This allows SDDC Manager to automate the certificate signing process using the organization's enterprise CA." F). In SDDC Manager, replace the SSL certificates for vCenter, ESXi, NSX Manager, SDDC Manager and Aria Suite Lifecycle.Exact Extract:

"With Microsoft CA integration, you can use SDDC Manager to generate and replace SSL certificates for all key solution components, including vCenter, ESXi, NSX Manager, SDDC Manager, and Aria Suite Lifecycle.

This process ensures full visibility and management through SDDC Manager." D). In SDDC Manager, replace the SSL certificates for vCenter, NSX Manager, SDDC Manager and Aria Suite Lifecycle.Exact Extract:

"Certificate replacement workflows in SDDC Manager allow you to select which managed components have their certificates replaced with CA-signed certificates. You must select and update all components that are not already using compliant CA-signed certificates." Why Not the Other Options?

A:ESXi certificate replacement should be managed via SDDC Manager for compliance, not directly in vCenter.

B:OpenSSL CA is not part of the company's security policy or supported by the current workflow.

E:Aria Suite Lifecycle and its components already use CA-signed certificates, so this action is not needed.

Summary:

To ensure compliance with the updated security policy and maintain management with SDDC Manager, the administrator must:

Integrate the Microsoft CA into SDDC Manager (C),

Use SDDC Manager to replace all relevant solution SSL certificates for vCenter, ESXi, NSX Manager, SDDC Manager, and Aria Suite Lifecycle (F), And use SDDC Manager's certificate replacement workflow to update any components still requiring CA-signed certificates (D).These steps are mandated and supported by VMware Cloud Foundation official documentation.

NEW QUESTION # 159
The administrator has been tasked with applying asynchronous software updates to the VMware Cloud Foundation (VCF) instance using the VMware Async Patch CLI Tool.

Which four steps would an administrator take to complete the task? (Choose four.)

- A. Apply the patches directly through the Async Patch CLI Tool.
- B. Downloadthe bundles from SDDC Manager.
- C. Enable the bundles.
- D. Upload the confirmation to SDDC Manager.
- E. Apply the patches through the SDDC Manager Ul.
- F. Download the bundles.
- G. Upload the bundles to SDDC Manager.

Answer: C,E,F,G

Explanation:
https://techdocs.broadcom.com/us/en/vmware-cis/vcf/vcf-5-2-and-earlier/5-2/ap-tool-5-2/apply-an-async- patch-to-vmware-cloud-foundation-in-offline-mode.html

NEW QUESTION # 160
Which tool is most appropriate for analyzing detailed network performance metrics in a vSphere environment?

- A. vSAN Health Service
- B. vSphere Client
- C. Aria Operations
- D. vSphere CLI

Answer: C

Explanation:
Aria Operations (formerly vRealize Operations) is the most appropriate tool for analyzing detailed network performance metrics in a vSphere environment. It provides comprehensive monitoring, analytics, and performance management, including network performance metrics across the vSphere infrastructure.

NEW QUESTION # 161
An administrator's passwords for their NSX 'root', 'admin', and 'audit' accounts in the Cloud Foundation management domain expired. The administrator logged into the NSX Manager console and changed the passwords for all three accounts. The passwords are now showing a status of "Disconnected" in the SDDC Manager UI.

- A. In SDDC Manager, navigate to Password Management and select the account with the password with a "Disconnected" status, click the vertical ellipsis (three dots), and click Rotate.
- B. In SDDC Manager, navigate to Password Management and select the account with the password with a "Disconnected" status, click the vertical ellipsis (three dots), and click Sync.
- C. In order to correct this issue, how can SDDC Manager be updated with the new passwords?
- D. In SDDC Manager, navigate to Password Management and select the account with the password with a "Disconnected" status, click the vertical ellipsis (three dots), and click Remediate.

Answer: A

Explanation:
To resolve the issue of disconnected accounts in SDDC Manager after password changes, the administrator must navigate to the Password Management section in the SDDC Manager UI. From there, the administrator can select the affected account, click the vertical ellipsis (three dots), and choose Update to enter the new password for that account, ensuring SDDC Manager is synced with the correct credentials.

NEW QUESTION # 162
