

Reliable VMware 2V0-16.25 Test Topics - Exam 2V0-16.25 Cram Review

P.S. Free & New 2V0-16.25 dumps are available on Google Drive shared by TrainingDumps: <https://drive.google.com/open?id=15oP5k3HWIGSiOoTIY51sLORDRkyO5jKf>

Today is the right time to learn new and in demands skills. You can do this easily, just get registered in certification exam and start preparation with VMware vSphere Foundation 9.0 Administrator 2V0-16.25 exam dumps. The VMware vSphere Foundation 9.0 Administrator 2V0-16.25 pdf questions and practice test are ready for download. Just pay the affordable 2V0-16.25 authentic dumps charges and click on the download button. Get the 2V0-16.25 latest dumps and start preparing today.

VMware 2V0-16.25 Exam Syllabus Topics:

Topic	Details
Topic 1	VMware vSphere Foundation Fundamentals: This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.

Topic 2	• Deploy, Configure, and Operate VMware vSphere Foundation (VVF): This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.
Topic 3	• IT Architectures, Technologies, Standards: This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.
Topic 4	• Troubleshoot and Optimize the VMware Solution: This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.
Topic 5	• Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.

Our customer service is available all day, and your problems can be solved efficiently at any time. Last but not least, we can guarantee the security of the purchase process of 2V0-16.25 Test Questions and the absolute confidentiality of customer information. You do not have to worry about these issues, because we know that this is a basic condition for us to establish a good business model. If you have any questions, you can always contact us online or email us. We will reply as soon as possible.

VMware vSphere Foundation 9.0 Administrator Sample Questions (Q20-Q25):

NEW QUESTION # 20

An organization requires a centralized platform to monitor the performance, health, and capacity of their entire VMware vSphere Foundation (VVF) environment.

Which two components would provide this capability? (Choose two.)

- A. vSphere Supervisor
- B. VCF Operations
- C. VCF Operations for Logs
- D. VCF Operations for Networks

Answer: B,D

Explanation:

The requirement is for a centralized platform to monitor performance, health, and capacity across the entire VMware vSphere Foundation (VVF) environment.

* VCF Operations

* Provides end-to-end performance monitoring, capacity management, and health analytics across vCenter, ESXi, vSAN, and NSX.

- * Includes FinOps and Capacity Planning, performance diagnostics, and AI-driven troubleshooting for faster remediation.
- * This is the primary component for monitoring the entire VCF environment.
- * VCF Operations for Networks
- * Extends observability to network operations by monitoring NSX health, VPCs, and network flows.
- * Provides traffic summaries, alerts, and network capacity metrics.
- * Integrated with VCF Operations to ensure a complete platform-wide view of health and performance.
- * Why not the others?
- * VCF Operations for Logs# Focused on log management, troubleshooting, and diagnostics (not holistic performance/capacity monitoring).
- * vSphere Supervisor# Provides Kubernetes namespace and workload management, not centralized performance/capacity monitoring.

NEW QUESTION # 21

How does an administrator configure VMware Cloud Foundation (VCF) Operations for logs to send Notifications and Metrics to VCF Operations?

- A. Launch the wizard from VCF Operations for Logs.
- B. Configure the Integration through VCF Operations for Logs.
- **C. Configure the Integrations through VCF Operations.**
- D. Launch the wizard from VCF Operations.

Answer: C

Explanation:

To configure VMware Cloud Foundation (VCF) Operations for logs so that it can send notifications and metrics, administrators must use the Integrations workflow inside VCF Operations.

* You configure integrations centrally from the Administration > Integrations page in VCF Operations.

* Here you add the VCF Operations for Logs data source, configure credentials, and set up Webhooks for alerts.

* Once integration is completed, VCF Operations for Logs data can be consumed in VCF Operations dashboards and used for notifications and metrics.

This process is not launched directly from "VCF Operations for Logs," but rather from VCF Operations itself, where all integrations (vCenter, vSAN, NSX, and Logs) are centrally managed.

NEW QUESTION # 22

In VMware Cloud Foundation (VCF) Operations, which node type is responsible for providing fault tolerance for administrative functions within the VCF Operations cluster?

- A. Data Node
- **B. Replica Node**
- C. Primary Node
- D. Witness Node

Answer: B

Explanation:

In VCF Operations (vRealize Operations) cluster architecture:

* The Primary Node handles administration and management.

* The Replica Node provides fault tolerance for the Primary Node, ensuring that administrative functions remain available in case of failure.

* Data Nodes handle data collection and analytics.

* Witness Node# Not a role in VCF Operations; relevant to vSAN clusters.

Thus, the node type providing fault tolerance for administrative functions is the Replica Node.

References:

VMware Cloud Foundation 9.0 -Operations Cluster Roles

VMware Docs: vROps Node Types

NEW QUESTION # 23

An administrator must configure identity access for VMware vSphere Foundation (VVF) to allow admin accounts from the enterprise Active Directory domain corp.local to log in using domain credentials. Security requires authentication to use the default Active Directory protocol, without federation.

Which configuration step is required to enable Active Directory users to authenticate to vCenter?

- A. Configure Identity Federation using SAML with corp.local.
- **B. Add Active Directory over LDAP as an identity source.**
- C. Add the domain controller certificate to the Trusted Root store in vCenter.
- D. Configure a trusted identity provider using OpenID Connect (OIDC).

Answer: B

Explanation:

To allow Active Directory domain users (corp.local) to authenticate in vCenter with domain credentials:

* The correct method is configuring Active Directory over LDAP as an identity source. (D)

* This uses the default AD protocol (LDAP/Kerberos) without requiring SAML or OIDC federation.

Other options:

* A. Adding domain controller certificate# Needed for LDAPS but not the main step.

* B. Identity Federation with SAML# Requires federation, not allowed per requirements.

* C. OpenID Connect (OIDC)# Used for external IdPs, not traditional AD auth.

VMware Docs: Add AD over LDAP as Identity Source

NEW QUESTION # 24

The security team requests the ability to log into VMware vCenter and review datacenter, cluster and network configurations. The following details are provided:

* The security team is not authorized to make any changes to the environment.

* Each user must login with unique credentials.

What steps should the administrator perform to grant access to the security team?

- A. Create a security user, assign the user the Read-Only role, share the credentials with the security team.
- B. Create a group for the security team, add the users to the group, and assign the group the Network Administrator role.
- C. Share the password for 'administrator@vsphere.local' with the security team.
- **D. Create a group for the security team, add the users to the group, and assign the group the Read-Only role.**

Answer: D

Explanation:

The security team requires visibility into vCenter configurations but must not make changes.

* Best practice is to create an Active Directory or vCenter group, add the security users, and assign them the Read-Only role at the datacenter/cluster/network level.

* This ensures each user logs in with unique credentials, maintaining accountability.

Why others are incorrect:

* A. Share administrator@vsphere.local password# Violates security best practices.

* B. Create a single user and share credentials# Still insecure, lacks unique audit trails.

* C. Assign Network Administrator role# Grants configuration permissions, not allowed.
