Candidates all around the globe use their full potential only to get WGU Cloud-Deployment-and-Operations certification. Once the candidate is a WGU certified, he gets multiple good career opportunities in the WGU sector. To pass the Cloud-Deployment-and-Operations Certification Exam a candidate needs to be updated and reliable WGU Cloud Deployment and Operations (Cloud-Deployment-and-Operations) prep material.

The DumpsTests is one of the top-rated and reliable platforms for quick and complete Cloud-Deployment-and-Operationsexam preparation. The DumpsTests has been offering real, valid, and updated WGU Cloud Deployment and Operations exam questions for many years. Over this long time period countless WGU Cloud-Deployment-and-Operations Exam candidates have passed their dream WGU Cloud-Deployment-and-Operations certification and doing jobs in the world's top brands.

Practice WGU Cloud-Deployment-and-Operations Test Engine & Exam Cloud-Deployment-and-Operations Blueprint

If you're still studying hard to pass the WGU Cloud-Deployment-and-Operations exam, DumpsTests help you to achieve your dream. We provide you with the best WGU Cloud-Deployment-and-Operations exam materials. It passed the test of practice, and with the best quality. It is better than WGU Cloud-Deployment-and-Operations tutorials and any other related materials. It can help you to pass the WGU Cloud-Deployment-and-Operations exam, and help you to become a strong IT expert.

WGU Cloud Deployment and Operations Sample Questions (Q43-Q48):

NEW QUESTION # 43

(Which component should be used to configure email notifications for a trigger by Amazon Made?)

- A. Simple Queue Service
- **B. EventBridge**
- C. Elastic Kubernetes Service
- D. CodeDeploy

Answer: B

Explanation:

Amazon EventBridge should be used to configure email notifications for a trigger by Amazon Made, as it can route events to targets like Amazon SNS (Simple Notification Service) for email delivery. EventBridge integrates with AWS services to handle event-driven notifications. The WGU Cloud Deployment and Operations Study Guide (Section 4.3, EventBridge) states, "EventBridge can be configured to send events from Amazon Made to SNS, enabling email notifications by subscribing an email endpoint to the SNS topic." SQS, EKS, and CodeDeploy do not support this notification configuration.

NEW QUESTION # 44

(Which AWS monitoring feature is used to process events using AWS Lambda?)

- A. Logs
- B. Targets
- **C. Rules**
- D. Metrics

Answer: C

Explanation:

The AWS monitoring feature used to process events with AWS Lambda is CloudWatch Events, specifically through the use of rules. Rules define the events to monitor (e.g., based on event patterns) and specify targets like AWS Lambda functions to process those events. The WGU Cloud Deployment and Operations Study Guide (Section 4.3, CloudWatch Events) explains that rules are the core component for event-driven architectures, enabling automation by linking events to Lambda for processing. Metrics, targets, and logs are related but not the primary feature for this function.

NEW QUESTION # 45

(Which AWS CloudFormation feature should be used to specify the AWS resources to be provisioned?)

- A. Exports
- B. StackSet
- C. Change set
- **D. Template**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The CloudFormation template feature should be used to specify the AWS resources to be provisioned. A template is a JSON or YAML file that defines the resources (e.g., EC2 instances, S3 buckets) and their configurations for deployment. The WGU Cloud Deployment and Operations Study Guide (Section 5.3, CloudFormation Templates) states, "The template is the core component of CloudFormation, containing the resource specifications and properties that are provisioned when a stack is created." Change sets, exports, and stack sets serve different purposes (e.g., previewing changes, sharing outputs, managing multiple stacks).

NEW QUESTION # 46

(A company builds an application that renders 3D movies for its users. The application does this by spawning a fleet of instances that each take a slice of the workload and then render a few hundred frames in around 30 minutes. If processing on a node is interrupted, the work can be moved to other running nodes. The cost to users is based on the underlying AWS cost plus a margin. Which EC2 instance type is most suitable to run workload pattern at the lowest cost?)

- A. Dedicated Instance
- B. On-Demand Instance
- **C. Spot Instance**
- D. Reserved Instance

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Spot Instances are the most suitable EC2 instance type for this workload pattern, offering the lowest cost for short, interruptible tasks like 3D rendering, where work can be redistributed if interrupted. This aligns with the company's cost-plus pricing model. The WGU Cloud Deployment and Operations Study Guide (Section 7.3, EC2 Instance Types) states, "Spot Instances provide significant cost savings (up to 90% off On-Demand) for fault-tolerant, short-term workloads like rendering, where interruptions can be handled by redistributing tasks to other nodes." On-Demand, Dedicated, and Reserved Instances are more expensive and less flexible for this use case.

NEW QUESTION # 47

(What is the role of a patch baseline in Patch Manager?)

- A. Notifies Config of any patch updates that need to be performed
- **B. Defines patches that should and should not be installed on EC2 instances**
- C. Assigns an IAM role for services that can auto-approve patches upon release
- D. Installs all patch updates as they become available by default

Answer: B

Explanation:

A patch baseline in Patch Manager defines the patches that should and should not be installed on EC2 instances, specifying approval rules for security updates, other updates, and exclusions. This ensures controlled and compliant patching. The WGU Cloud Deployment and Operations Study Guide (Section 5.2, Patch Manager) states, "A patch baseline specifies which patches are approved for installation and which are excluded, allowing customization of patch deployment (e.g., approving only critical security updates)." Options A, B, and D misrepresent the baseline's role, as it does not auto-install, assign IAM roles, or notify Config directly.

NEW QUESTION # 48

.....

Our Cloud-Deployment-and-Operations learn materials can provide a good foundation for you to achieve your goal. A good job requires good skills, and the most intuitive way to measure your ability is how many qualifications you have passed and how many qualifications you have. With a qualification, you are qualified to do this professional job. Our Cloud-Deployment-and-Operations Certification material is such a powerful platform, it can let you successfully obtain the Cloud-Deployment-and-Operations certificate, from now on your life is like sailing, smooth sailing.
