Flame Test Lab Activity Key

Background

The heat from a laboratory burner will cause the ions of some elements to give off light. Electrons will absorb the heat energy from the flame and will "jump" to a higher energy level. When the electrons return to their original energy levels, this absorbed energy is released as light. Different elements absorb and release different amounts of energy and thus produce different kinds of light. This light may be visible or invisible, infrared or ultraviolet radiation. Analysis of this light can be used to identify elements and molecules. In today's lab, we will observe the visible range of light emission.

Objectives

1. Perform a flame test to identify the characteristic color of metal ions.
2. Identify the metal ion in an unknown solution.
3. Calculate the energy of emitted photons.

Materials: (per lab group)

10 ml dilute solutions of the following:

Barium Chloride
Calcium Chloride
Lithium Chloride
Potassium Chloride
Sodium Chloride
Strontium Chloride
Unknown Solution

7 Wood Splints
1 Bunsen Burner
Safety Goggles & Aprons

Note:

If chloride compounds are not available, metal nitrate compounds may be substituted.

Use dilute or approximately 0.1 M solutions

Unknowns:

Number the beakers 1-12.

Add solutions as follows:

- | | |
|-----------------------|------------------------|
| 1. Strontium Chloride | 7. Calcium Chloride |
| 2. Calcium Chloride | 8. Strontium Chloride |
| 3. Potassium Chloride | 9. Barium Chloride |
| 4. Barium Chloride | 10. Potassium Chloride |
| 5. Lithium Chloride | 11. Sodium Chloride |
| 6. Sodium Chloride | 12. Lithium Chloride |

Procedure

1. Put on your safety goggles and an apron.
2. Obtain a wood splint and the barium chloride solution.
3. Dip the wood splint into the solution and allow it to soak for 1-2 minutes.
4. Light Bunsen Burner. USE CAUTION!
5. Remove the splint from the solution and hold the end of the splint into the flame. Do not burn the splint.
6. Observe and record the color of the flame.
7. Repeat steps 2-6 using the remaining chloride solutions.
8. Obtain an unknown solution from your teacher. Record the number of your unknown.
9. Soak a wood splint in the unknown solution.
10. Hold the splint in the flame and record the color of the flame that is produced.
11. Using your data, identify the metal ion in your unknown solution.

Our research materials will provide three different versions, the PDF version, the software version and the online version. Software version of the features are very practical, in order to meet the needs of some potential customers, we provide users with free experience, if you also choose the characteristics of practical, I think you can try to use our S2000-025 test prep software version. I believe you have a different sensory experience for this version of the product. Because the software version of the product can simulate the real test environment, users can realize the effect of the atmosphere of the S2000-025 Exam at home through the software version. Although this version can only run on the Windows operating system, our software version of the learning material is not limited to the number of computers installed and the number of users, the user can implement the software version on several computers. You will like the software version. Of course, you can also choose other learning mode of the S2000-025 valid practice questions.

To increase your chances of passing IBM's certification, we offer multiple formats for braindumps for all S2000-025 exams at PassReview. However, since not all takers have the same learning styles, we devise a customizable module to suite your needs. More importantly, our commitment to help you become S2000-025 Certified does not stop in buying our products. We offer customer support services that offer help whenever you'll be need one.
