If you feel that it is worthy for you to buy our SAFe-Practitioner test torrent you can choose a version which you favor.

## Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q176-Q181):

### NEW QUESTION # 176

Which core competency of the Lean Enterprise helps drive Agile Quality practices?

- A. Team and Technical Agility
- B. Lean systems Engineering
- C. Lean Portfolio Management
- D. DevOps and Release on Demand

**Answer: A**

Explanation:

Team and Technical Agility is one of the core competencies of the Lean Enterprise that helps drive Agile Quality practices. This competency describes the critical skills and Lean-Agile principles and practices that high-performing Agile teams and teams of Agile teams use to create high-quality solutions for their customers. The main aspects of this competency are: team and technical agility, Agile team, Built-in Quality, and Agile architecture. Built-in Quality is a set of practices to help ensure that the outputs of Agile teams in business and technology domains meet appropriate quality standards throughout the process of creating customer value. Built-in Quality practices include test-first, test automation, continuous integration, refactoring, pair work, code reviews, exploratory testing, and more. References: Team and Technical Agility - Scaled Agile Framework, Built-In Quality - Scaled Agile Framework

### NEW QUESTION # 177

What are three practices of Extreme Programming (XP)? (Choose three.) You have reached the max number of allowed answers

- A. Pair programming
- B. Test-driven development
- C. Behavior-driven development
- D. Deployment automation
- E. Continuous Integration
- F. Intentional architecture

**Answer: A,B,E**

Explanation:

Test-driven development (TDD) is a practice of writing automated tests before writing the production code, and then refactoring the code to make it pass the tests. TDD helps ensure that the code is correct, maintainable, and meets the requirements. Pair programming is a practice of having two programmers work together on the same code, one as the driver who writes the code, and the other as the navigator who reviews the code and provides feedback. Pair programming helps improve the quality of the code, share knowledge, and reduce defects. Continuous Integration (CI) is a practice of integrating and testing the code frequently, usually several times a day, using automated tools. CI helps detect and fix errors early, improve collaboration, and deliver faster. (Choose - Madanswer

### NEW QUESTION # 178

Which of the following are acceptable measures expressed by the M in the SMART model for PI Objectives?

- A. quantitative measures
- B. All of the above
- C. descriptive measures
- D. a range

**Answer: B**

## NEW QUESTION # 179

Which factor helps unlock the intrinsic motivation of knowledge workers?

- A. Team performance incentives
- B. Parallel development
- **C. Autonomy**
- D. Pay-for-performance

**Answer: C**

Explanation:

According to the SAFe for Teams SP (6.0) - SAFe Practitioner handbook and study guide, the factor that helps unlock the intrinsic motivation of knowledge workers is autonomy. Autonomy means giving knowledge workers the freedom and responsibility to make decisions about their work, such as what to work on, how to do it, and when to do it. Autonomy fosters creativity, innovation, and engagement, as knowledge workers can pursue their own interests and passions, and feel a sense of ownership and accountability for their outcomes.

Autonomy also supports the Agile principle of self-organizing teams, which are more productive and responsive to change than traditional, command-and-control teams. References: Principle #8 - Unlock the Intrinsic Motivation of Knowledge Workers - Scaled Agile Framework, Which factor helps unlock the intrinsic motivation of knowledge workers?, Principle #8: Unlock the intrinsic motivation of knowledge workers ...

## NEW QUESTION # 180

How does SAFe recommend using a second operating system to deliver value?

- A. Reorganize the hierarchies around the flow of value
- **B. Organize development around the flow of value while maintaining the hierarchies**
- C. Decide whether to apply a hierarchical or Value Stream organizational model across the Enterprise
- D. Build a small entrepreneurial network focused on the Customer in place of existing hierarchies

**Answer: B**

Explanation:

SAFe recommends using a second operating system to deliver value by creating a dual operating system that consists of a Network and a Hierarchy. The Network is optimized for speed and adaptability, while the Hierarchy is optimized for efficiency and stability. The Network is composed of development value streams (DVSs) that are realized by product-focused Agile Release Trains (ARTs). The ARTs are cross-functional teams that work together to deliver software products on a regular schedule. The Hierarchy provides the necessary support and governance for the Network, such as operations, HR, finance, and compliance. By using a second operating system, SAFe enables business agility by allowing the organization to organize and reorganize around the flow of value, while maintaining the benefits and stability of the existing hierarchical structure.
