SAFe-Practitioner Test Dumps Demo & Exam SAFe-Practitioner Overviews

However, preparing for the SAFe-Practitioner exam is not an easy job until they have real SAFe Practitioner Exam (6.0) (SAFe-Practitioner) exam questions that are going to help them achieve this target. They have to find a trusted source such as ITPassLeader to reach their goals. Get SAFe-Practitioner Certified, and then apply for jobs or get high-paying job opportunities. If you think that SAFe-Practitioner certification exam is easy to crack, you are mistaken.

Scrum SAFe-Practitioner (SAFe 5 Practitioner (SP)) Exam is a certification program designed to test the knowledge and skills of professionals who are looking to become experts in the Scrum and SAFe methodologies. SAFe-Practitioner exam is specifically tailored to individuals who want to lead Agile teams and help organizations adopt Agile practices for improved business outcomes. SAFe Practitioner Exam (6.0) certification demonstrates that an individual has the knowledge and skills required to effectively lead Agile teams, develop Agile processes, and successfully implement Agile methodologies within their organization.

Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q96-Q101):

NEW QUESTION # 96

A self-organizing team does not interact with the organization.

- A. FALSE
- B. TRUE

Answer: A

NEW QUESTION # 97

What is one component of a Guardrail in Lean Portfolio Management?

- A. Participatory budgeting forums that lead to Value Stream budget changes
- B. Determining if business needs meet the Portfolio Threshold
- **C. Allocation of centralized vs decentralized decisions in the Enterprise**
- D. Capacity allocation of the Value Stream compared to process mapping

Answer: C

Explanation:

A guardrail in Lean Portfolio Management (LPM) is a policy or practice that helps ensure that the portfolio is aligned and funded to create and maintain the solutions needed to meet business targets. One of the guardrails in LPM is the allocation of centralized vs decentralized decisions in the enterprise. This guardrail defines the boundaries and guidelines for decision making at different levels of the organization, such as strategic, tactical, and operational. Centralized decisions are those that require alignment and agreement across multiple value streams or portfolios, such as vision, strategy, budget allocation, and governance. Decentralized decisions are those that can be made by the value streams or teams closest to the customer and the work, such as backlog prioritization, solution design, and delivery. The goal of this guardrail is to empower the teams and value streams to make fast and effective decisions, while ensuring alignment and coherence at the portfolio and enterprise levels¹². NEW QUESTION # 98

Which of the following continuous delivery pipeline aspects focuses on enabling the organization to deliver value aligned with business needs?

- A. Release on Demand
- B. Continuous Integration
- **C. Continuous Exploration**
- D. Continuous Deployment

Answer: C

Explanation:

Continuous Exploration (CE) is the continuous delivery pipeline aspect that focuses on enabling the organization to deliver value aligned with business needs. CE is the process of understanding the market problem or customer need, defining a vision and a roadmap for the solution, and validating the assumptions and hypotheses through fast feedback and learning cycles. CE involves activities such as design thinking, lean startup, hypothesis-driven development, and innovation accounting. CE helps the organization align on what to build and why, and generate a continuous flow of valuable features for the solution. NEW QUESTION # 99

Which of the following Story components captures details on testing for completion?

- **A. Acceptance criteria**
- B. Story map
- C. User voice
- D. Release plan

Answer: A

Explanation:

Acceptance criteria are the conditions that a story must satisfy to be accepted by the Product Owner and the stakeholders. They define the boundaries of the story and provide guidance on how to test it for completion.

Acceptance criteria are usually written as a list of statements or scenarios that describe the expected behavior and outcomes of the story. They help to ensure that the story delivers value to the user and meets the Definition of Done¹²³⁴. NEW QUESTION # 100

Which of the following types of Enabler Stories is used for building and evaluating prospective Solutions alternatives?

- A. Architecture
- B. Compliance
- C. Exploration
- D. Infrastructure

Answer: C

Explanation:

According to the SAFe-for-Teams-SAFE-Practitioner-6-0 documents, enabler stories are short descriptions of a small piece of desired functionality that support exploration, architecture, infrastructure, or compliance.

Among these four types of enabler stories, exploration is the one that is used for building and evaluating prospective solutions alternatives. Exploration enabler stories support research, prototyping, and other activities needed to develop an understanding of customer needs, including the exploration of prospective solutions and evaluation of alternatives. They help validate assumptions, reduce uncertainty, and increase the likelihood of building the right thing. Therefore, the correct answer is A. Exploration.
