Therefore, with the help of these experts, the contents of SAFe-Practitioner exam questions must be the most advanced and close to the real exam.

Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q256-Q261):

NEW QUESTION # 256

During the Innovation and Planning Iteration, an organization invites every team member to work on any project they choose. Which of the following SAFe Core Values is the organization demonstrating?

- A. Relentless improvement
- B. Make value flow without interruptions
- C. Siloed thinking
- D. Visualizing work

Answer: A

Explanation:

Relentless improvement is one of the four SAFe Core Values, which are the guiding principles that help individuals and organizations achieve Business Agility¹. Relentless improvement means that everyone in the organization is committed to continuously learning, growing, and innovating, and that they embrace a culture of experimentation, feedback, and problem-solving². By inviting every team member to work on any project they choose during the Innovation and Planning Iteration, the organization is demonstrating relentless improvement, as they are providing time and space for people to explore their creative ideas, learn new skills, and collaborate with others outside their usual teams. This can lead to better solutions, higher engagement, and faster adaptation to changing customer and market needs^{3,4}. NEW QUESTION # 257

Which statement is true about the PI Planning event?

- A. It involves Product Management and Product Owners on the first day and the rest of the teams on the second day
- B. It involves program Portfolio Management to prioritize the Stories presented by teams during the final plan review
- C. It involves only the team members who are most qualified to estimate the work
- **D. It involves everyone in the program over a two-day period**

Answer: D

Explanation:

The PI Planning event is a two-day event that brings together all the teams and stakeholders of an Agile Release Train (ART) to align on a common vision, mission, and goals for the upcoming Program Increment (PI). The PI Planning event involves everyone in the program, including the Business Owners, Product Management, System Architects, Agile teams, Scrum Masters, Product Owners, Release Train Engineers, and other relevant roles. The PI Planning event also fosters collaboration, communication, and commitment among the participants, and helps identify and address the risks and impediments that may affect the delivery of value. NEW QUESTION # 258

What is the recommended final agenda item of PI Planning?

- **A. Taking the PI confidence vote**
- B. Reviewing the final plan
- C. Participating in the planning retrospective
- D. Surfacing the ART risks

Answer: A

Explanation:

= The recommended final agenda item of PI Planning is taking the PI confidence vote. This is a simple and quick way to assess the level of confidence and commitment of the teams and stakeholders to the PI objectives and plan. The PI confidence vote is done by asking each team member and stakeholder to hold up one to five fingers, indicating their confidence level from low to high. The average score across the ART is calculated and displayed. If the score is below 3, the teams and stakeholders are asked to identify the top issues or risks that lower their confidence and propose mitigation actions. The confidence vote is repeated until the score reaches 3 or above, or the timebox expires. The confidence vote helps to surface and address potential impediments, foster alignment and accountability, and create a sense of ownership and empowerment for the PI plan. NEW QUESTION # 259

The CALMR approach to DevOps includes Automation, Lean flow, Measurement, and Recovery. What does the "C" represent?

- A. Continuous Integration
- B. Cycle-time
- C. Cadence
- **D. Culture**

Answer: D

Explanation:

Culture is the first element of the CALMR approach to DevOps in SAgE. It refers to the shared mindset and values that support successful DevOps adoption. Culture in SAgE is influenced by the Lean-Agile principles and practices that guide the entire framework. Culture in DevOps requires customer-centricity, collaboration, trust, empowerment, learning, and feedback among all the stakeholders involved in the value stream. Culture also fosters a shift-left mentality, where operational and quality concerns are addressed early and often in the development process. Culture is the foundation for the other elements of CALMR: automation, lean flow, measurement, and recovery. NEW QUESTION # 260

What best describes the process of the confidence vote?

- A. Business Owners vote
- B. The managers vote
- C. The teams and the ARTs vote
- D. Each person votes

Answer: D

Explanation:

The confidence vote is a measure of the teams' and ARTs' belief in their ability to deliver the established PI objectives. It is conducted at the end of the PI planning event, after the teams have presented their plans and identified the risks. Each person votes using their fingers (first of five) or a digital tool for remote events. The scale is as follows:

- * 5: I am confident we can meet or exceed our objectives
- * 4: I am confident we can meet our objectives
- * 3: I think we can meet our objectives, but I have some concerns
- * 2: I doubt we can meet our objectives, and I have major concerns
- * 1: I am sure we cannot meet our objectives

The purpose of the confidence vote is to surface any issues or impediments that might prevent the teams from achieving their goals. It also helps to align the expectations of the stakeholders and the teams. If the average vote is below 3, the teams and the ARTs need to revisit their plans and address the root causes of the low confidence. The confidence vote is repeated until the average vote is 3 or higher, or until the timebox expires.
