The service of SailPoint-Certified-IdentityNow-Engineer test guide is very prominent. It always considers the needs of customers in the development process. There are three versions of our SailPoint-Certified-IdentityNow-Engineer learning question, PDF, PC and APP. You can choose according to your needs. Of course, you can use the trial version of SailPoint-Certified-IdentityNow-Engineer exam training in advance. After you use it, you will have a more profound experience. You can choose your favorite our SailPoint-Certified-IdentityNow-Engineer Study Materials version according to your feelings. I believe that you will be more inclined to choose a good service product, such as SailPoint-Certified-IdentityNow-Engineer learning question

Our SailPoint-Certified-IdentityNow-Engineer exam guide have also set a series of explanation about the complicated parts certificated by the syllabus and are based on the actual situation to stimulate exam circumstance in order to provide you a high-quality and high-efficiency user experience. In addition, the SailPoint-Certified-IdentityNow-Engineer exam guide function as a time-counter, and you can set fixed time to fulfill your task, so that promote your efficiency in real test. The key strong-point of our SailPoint-Certified-IdentityNow-Engineer Test Guide is that we impart more important knowledge with fewer questions and answers, with those easily understandable SailPoint-Certified-IdentityNow-Engineer study braindumps, you will find more interests in them and experience an easy learning process.

Valid SailPoint-Certified-IdentityNow-Engineer Exam Vce, SailPoint-Certified-IdentityNow-Engineer Exam Cost

The SailPoint Certified IdentityNow Engineer (SailPoint-Certified-IdentityNow-Engineer) is available in three easy-to-use forms. The first one is SailPoint-Certified-IdentityNow-Engineer dumps PDF format. It is printable and portable. You can print SailPoint-Certified-IdentityNow-Engineer questions PDF or access them via your smartphones, tablets, and laptops. The PDF format can be used anywhere and is essential for students who like to learn on the go.

SailPoint Certified IdentityNow Engineer Sample Questions (Q100-Q105):

NEW QUESTION # 100

Is this statement true about certification campaigns?

Solution: Search-based certification campaigns are used to review access for non-correlated accounts.

- A. No
- B. Yes

Answer: B

Explanation:

Yes, search-based certification campaigns can be used to review access for non-correlated accounts.

Non-correlated accounts are accounts that do not have a direct link to any identity in the system, which means they may represent orphaned or unmanaged accounts. Search-based certifications allow administrators to create campaigns based on specific criteria, including targeting these non-correlated accounts to ensure they are properly reviewed and addressed within the organization.

NEW QUESTION # 101

DRAG DROP

What is the required order of steps to implement an identity model for a given authoritative source?

Drag the five steps from the left to the answer area on the right, and place them in the coned order.

Not all options will be used.

The screenshot shows a drag-and-drop interface with two main columns: 'Options' and 'Answer List'.

Options Column: This column contains nine steps, each with an 'Add to answer list' button to its right. The steps are:

- Finalize a source create profile.
- Preview the identity mappings with aggregated data.
- Invite users.
- Create a source, and aggregate the data.
- Perform manual correlation.
- Create an identity profile and associate it to the source.
- Define identity mappings, including adding transforms.
- Update identity data.

Answer List Column: This column is currently empty, intended for the user to place the selected steps in the correct order.

A large watermark 'trainingdump.com' is overlaid diagonally across the entire interface.

Answer:

Explanation:

To implement an identity model for a given authoritative source, the correct sequence of steps is essential. Based on the image provided, the five key steps in the correct order are as follows:

Create a source, and aggregate the data.

The first step involves setting up the source system and aggregating its data into SailPoint IdentityNow.

Create an identity profile and associate it to the source.

After creating the source, an identity profile needs to be created, which will define the identity schema and associate it with the source.

Define identity mappings, including adding transforms.

This step involves configuring the mappings between source attributes and IdentityNow attributes, possibly adding transformation logic.

Preview the identity mappings with aggregated data.

This step allows you to check how the mappings are applied to actual aggregated data, ensuring correctness.

Finalize a source create profile.

Once all configurations are validated, the source profile is finalized, making it ready for production use.

These steps form the required workflow for successfully setting up and implementing an identity model for an authoritative source.

NEW QUESTION # 102

Exhibit.

Solution: An engineer has one small production data center with an Active Directory, a database server, and two cloud applications to which they need to connect. Where would the virtual appliances (VAs) reside in this scenario?

Solution: A

- A. No
- B. Yes

Answer: A

Explanation:

No, the Virtual Appliances (VAs) should not reside in A, which represents the SailPoint cloud environment. VAs are typically deployed in the on-premises network to interface directly with internal resources like Active Directory, databases, and applications. The cloud environment is where IdentityNow services are hosted, but the VAs need to be positioned closer to on-premise resources to manage identity synchronization and provisioning tasks.

Key Reference from SailPoint Documentation:

VA Placement Recommendations: Virtual Appliances are deployed in the on-premise network rather than the cloud, to ensure they have direct and secure access to internal resources.

NEW QUESTION # 103

An IdentityNow engineer has the following problem:

IdentityNow shows status failed on a virtual appliance (VA).

Is this one of the steps that should be taken to troubleshoot the issue?

Solution: Log in to the console of the VA and verify that the VA has connectivity to the internet.

- A. No
- B. Yes

Answer: B

Explanation:

Yes, verifying that the Virtual Appliance (VA) has connectivity to the internet is a critical step when troubleshooting a "failed" status in IdentityNow. The VA requires internet connectivity to communicate with SailPoint IdentityNow's cloud services for synchronization, updates, and other key functions. If the VA is unable to reach the internet, it can lead to a failed status. Logging in to the VA's console to test network connectivity (e.g., using ping or curl commands) is an important step in diagnosing the issue.

Key Reference from SailPoint Documentation:

VA Internet Connectivity Troubleshooting: SailPoint recommends checking the network connectivity as one of the first steps when the VA shows a failed status.

NEW QUESTION # 104

Is this statement accurate regarding SailPoint's multi-tenant processing environment?

Solution: Updates are rolled out on a continuous basis, which allows for rapid development and deployment of new features, security updates, and bug fixes.

- A. No
- **B. Yes**

Answer: B

Explanation:

Yes, SailPoint follows a continuous delivery and rolling update model for IdentityNow, which allows for the rapid development and deployment of new features, security updates, and bug fixes. Updates are rolled out automatically to tenants as part of this process, ensuring that customers always have the latest version of the platform. This continuous approach minimizes downtime and allows SailPoint to address security vulnerabilities and improve functionality in a timely manner.
