Therefore, the Advanced-Administrator practice materials can give users more advantages in the future job search, so that users can stand out in the fierce competition and become the best.

Salesforce Certified Advanced Administrator Sample Questions (Q217-Q222):

NEW QUESTION # 217

An administrator at AW Computing noticed that a custom field on the Contact object was changed from text to text area. What tool should the administrator use to investigate this change?

- **A. View Setup Audit Trail**
- B. Debug Log
- C. Field History Tracking
- D. Developer Console

Answer: A

NEW QUESTION # 218

Ursa Major Solar has a global customer base. Recent issues with customs have greatly delayed shipping to Canadian customers. While the Country field is already on the page layout, the sales team wants Canadian customers highlighted as a potential challenge for fulfillment until the shipping issue is resolved.

How should the administrator solve this issue?

- A. Create a new record type and page layout for Canadian customers, ensuring their pages look different.
- B. Modify the page layouts to move the Country field into its own section.
- C. Add a rich text component to the Lightning page. Use conditional visibility to only show the component if the account is Canadian.
- D. Create an in-app guidance prompt for Canadian records.

Answer: C

Explanation:

A rich text component allows administrators to add custom text or images to a Lightning page. Conditional visibility allows administrators to control when a component is visible based on criteria such as field values or device type. By using these features, administrators can highlight Canadian customers as a potential challenge for fulfillment without modifying the page layout or creating a new record type. References:

NEW QUESTION # 219

At Ursa Major Solar, several different planetary teams handle leads depending on which planet the lead is coming from. While most of the teams only need a few fields filled out to work the lead, the Jupiter team requires additional information to be filled out, such as which moon the lead is coming from. The administrator needs to automate which team is allocated the lead record based on the planet and ensure that every team has all of the information they need.

Which two features will satisfy these requirements?

Choose 2 answers

- A. Validation Rules
- B. Assignment Rules
- C. Matching Rules
- D. Workflow Rules

Answer: A,B

Explanation:

Assignment rules and validation rules are two features that can satisfy these requirements:

* Assignment rules are used to automatically assign leads or cases to users or queues based on certain criteria. In this case, an assignment rule can be used to assign leads to different planetary teams depending on which planet the lead is coming from.

* Validation rules are used to validate the data entered by users and prevent records from being saved if they do not meet certain criteria. In this case, a validation rule can be used to ensure that every team has all of the information they need by making certain fields required or dependent on other fields.

The other two options are incorrect because:

* Matching rules are used to identify duplicate records based on certain fields or fuzzy logic. They do not assign records or validate data.

* Workflow rules are used to automate tasks or actions based on certain criteria. They do not assign records or validate data.

NEW QUESTION # 220

The AW Computing administrator team does significant amounts of work around process automation and ensuring data integrity. When an administrator created a new validation rule in production, the development team complained that their deployment to production failed.

What should be implemented to prevent this conflict from happening?

- A. Refresh the full copy sandbox daily.
- B. Build automation and validation rules using screen flows.
- C. Review the setup audit trail prior to changes.
- **D. Test changes in a shared sandbox.**

Answer: D

NEW QUESTION # 221

Universal Containers wants to create a Job Application custom object related to a Job Posting custom object. They would also like a no-code solution to calculate the number of Job Applications for each Job Posting. What type of field should an administrator create on the Job Application to enable this functionality?

- A. Master-Detail
- B. Roll-up Summary
- **C. Lookup**
- D. Formula

Answer: C

NEW QUESTION # 222

.....
