Salesforce Advanced-Administrator Certification Exam is designed for experienced Salesforce administrators who have a deep understanding of the platform's advanced features and capabilities. Salesforce Certified Advanced Administrator certification validates an individual's skills and knowledge in managing complex Salesforce orgs and implementing advanced customization and automation solutions. It is the next level of certification after the Salesforce Certified Administrator credential and is highly regarded in the industry.

Salesforce Advanced-Administrator Certification Exam is recognized globally, and it is highly valued by employers looking for skilled Salesforce professionals. Salesforce Certified Advanced Administrator certification demonstrates that an individual has a deep understanding of Salesforce administration concepts and practices and can effectively manage complex Salesforce environments. In addition to enhancing career prospects, this certification also helps professionals to gain confidence in their abilities and to expand their knowledge of Salesforce administration. With this certification, professionals can take on more challenging roles in their organizations and contribute to the success of their businesses.

Salesforce Certified Advanced Administrator Sample Questions (Q176-Q181):

NEW QUESTION # 176

An administrator at AW Computing is trying to track the login history for a specific user. The AW Computing org has 150,000 users and multi-factor authentication (MFA) is enabled and enforced for all users. In reviewing the Identity Verification History data, the

administrator is unable to find any information for the mentioned user. The user used to log in regularly but has been inactive this quarter.

Which two reasons explain why the user's data is missing from Identity Verification History?

Choose 2 answers

- A. The last 6 months worth of data is stored in the Identity Verification History.
- B. Up to 20,000 records of users' identity verification attempts are stored.
- C. Identity Verification History stores the last year's worth of data.
- D. User belongs to a specific role for which identity verification data is not stored.

Answer: A,B

Explanation:

Explanation

Identity Verification History stores up to 20,000 records of users' identity verification attempts for various features that require MFA, such as logging in from an unknown browser or device, resetting a password, or changing personal information. The data is stored for up to 6 months and then deleted automatically.

Therefore, if a user has been inactive for more than 6 months or if there are more than 20,000 records in total, their data may be missing from Identity Verification History. References:

NEW QUESTION # 177

The administrator at AW Computing has received an email for a system error indicating that their organization has reached its hourly limit processing workflow time triggers.

Which two processes should the administrator review? Choose 2 answers

- A. Paused now Interviews
- B. Debug Logs
- C. Time-Based Workflows
- D. Apex Triggers

Answer: B,C

NEW QUESTION # 178

The Automated Case User is the default user for cases created via Email-to-Case. This user needs to have permissions to the new record type in order to assign it to the incoming cases. If the Automated Case User does not have the permissions, the cases will receive a different record type based on the organization-wide default settings. References: https://help.salesforce.com/s/articleView?id=sf.case_email_to_case.htm&type=5

https://help.salesforce.com/s/articleView?id=sf.case_automated_user.htm&type=5 QUESTION NO: 187 The administrator at Cloud Kicks recently replaced several case workflow rules with a single before save flow.

Since this change, some cases are routing in unexpected ways.

What could be the cause or the changes to routing?

- A. The flow precedes assignment rules; workflow rules are after assignment rules.
- B. Assignment rules no longer reference the correct fields.
- C. The old workflow rules are still active and impacting routing.
- D. Multiple automation tools have been used and the automation is executed in a different order.

Answer: D

Explanation:

Multiple automation tools have been used and the automation is executed in a different order. This could cause some cases to route in unexpected ways, because the before save flow might override or conflict with the assignment rules or other automation tools that run after the record is saved. The administrator should review the order of execution and ensure that the flow logic is consistent with the other automation tools. References:

https://help.salesforce.com/s/articleView?id=sf.flow_concepts_trigger_order.htm&type=5

https://developer.salesforce.com/docs/atlas.en-us.apexcode.meta/apexcode/apex_triggers_order_of_execution.htm

NEW QUESTION # 179

A sales manager at AW Computing has created a contact record but is missing some of the information to complete the record. The organization-wide default for Accounts is set to Public Read Only, and Contacts are controlled by parent.

- A. Users above the sales manager in the role hierarchy
- **B. Sales manager and system administrator**
- C. Who will be able to edit this new contact record?
- D. The owner and users below the owner in the role hierarchy
- E. All users in the organization

Answer: B

Explanation:

Explanation

The sales manager and system administrator will be able to edit this new contact record because they are either the owner or have Modify All Data permission respectively. Users above or below the sales manager in the role hierarchy will not be able to edit this contact record because contacts are controlled by parent and accounts are set to Public Read Only. All users in the organization will be able to view but not edit this contact record because accounts are set to Public Read Only. References:

https://help.salesforce.com/s/articleView?id=sf.admin_sharing.htm&type=5

NEW QUESTION # 180

The sales manager at Cloud Kicks wants a way to report on information from a form their clients fill out during the sales cycle. Once a form has been submitted, the client is unable to access it. This form may need to be filled out more than once during the sales cycle. There are more than 30 fields on this form, and the sales team needs to be able to see what changed from one submission to the next.

Which two options should an administrator use to solve this scenario?

Choose 2 answers

- A. Make custom fields.
- **B. Create a custom object.**
- C. Turn on Field Tracking.
- **D. Add forms as attachments.**

Answer: B,D
