Salesforce Certified AI Associate Exam Sample Questions (Q45-Q50):

NEW QUESTION # 45

What is a potential source of bias in training data for AI models?

- **A. The data is skewed toward is particular demographic or source.**
- B. The data is collected from a diverse range of sources and demographics.
- C. The data is collected in area time from sources systems.

Answer: A

Explanation:

Explanation

"A potential source of bias in training data for AI models is that the data is skewed toward a particular demographic or source. Skewed data means that the data is not balanced or representative of the target population or domain. Skewed data can introduce or exacerbate bias in AI models, as they may overfit or underfit the model to a specific subset of data. For example, skewed data can lead to bias if the data is collected from a limited or biased demographic or source, such as a certain age group, gender, race, location, or platform."

NEW QUESTION # 46

Cloud Kicks relies on data analysis to optimize its product recommendations for customers.

How will incomplete data quality impact the company's recommendations?

- A. The diversity of the product
- **B. The accuracy of the product**
- C. The response time for the product

Answer: B

Explanation:

Incomplete data quality negatively impacts the accuracy of product recommendations made by Cloud Kicks.

If data is missing or incomplete, the AI models used for product recommendation may not have enough information to accurately predict customer preferences and behavior. This leads to recommendations that may not align well with customer needs, reducing customer satisfaction and potentially affecting sales.

Ensuring complete and accurate data is crucial for effective recommendation systems. Salesforce discusses the impact of data quality on AI outcomes and strategies to enhance data integrity in their documentation on AI and data management, which can be referenced at Data Management for AI.

NEW QUESTION # 47

Which best describes the different between predictive AI and generative AI?

- A. Predictive AI uses machine learning to classes or predict output from its input data whereas generative AI does not use machine learning to generate its output
- **B. Predictive new and original output for a given input.**
- C. Predictive AI and generative have the same capabilities differ in the type of input they receive: predictive AI receives raw data whereas generation AI receives natural language.

Answer: B

Explanation:

"The difference between predictive AI and generative AI is that predictive AI analyzes existing data to make predictions or recommendations based on patterns or trends, while generative AI creates new content based on existing data or inputs. Predictive AI is a type of AI that uses machine learning techniques to learn from existing data and make predictions or recommendations based on the data. For example, predictive AI can be used to forecast sales, revenue, or demand based on historical data and trends.

Generative AI is a type of AI that uses machine learning techniques to generate novel content such as images, text, music, or video based on existing data or inputs. For example, generative AI can be used to create realistic faces, write summaries, compose songs, or produce videos."

NEW QUESTION # 48

Cloud Kicks wants to use Einstein Prediction Builder to determine a customer's likelihood of buying specific products; however, data quality is a...

How can data quality be assessed quality?

- A. Leverage data quality apps from AppExchange
- B. Build a Data Management Strategy.
- C. Build reports to expire the data quality.

Answer: A

Explanation:

"Leveraging data quality apps from AppExchange is how data quality can be assessed. Data quality is the degree to which data is accurate, complete, consistent, relevant, and timely for the AI task. Data quality can affect the performance and reliability of AI systems, as they depend on the quality of the data they use to learn from and make predictions. Leveraging data quality apps from AppExchange means using third-party applications or solutions that can help measure, monitor, or improve data quality in Salesforce."

NEW QUESTION # 49

What is machine learning?

- A. AI that creates new content
- B. AI that can grow its intelligence
- C. A data model used in Salesforce

Answer: C

Explanation:

"A data model is a machine learning feature used in Salesforce. A data model is a representation or abstraction of a real-world phenomenon or process using data structures and algorithms. A data model can be used to describe, analyze, or predict various aspects of the phenomenon or process using machine learning techniques."

NEW QUESTION # 50
