We are constantly updating our practice material to ensure that you receive the latest preparation material based on the actual Salesforce Integration-Architect exam content. Up to 1 year of free Salesforce Certified Integration Architect (Integration-Architect) exam questions updates are also available at PassExamDumps. The PassExamDumps offers a money-back guarantee (terms and conditions apply) for students who fail to pass their Salesforce Certified Integration Architect (Integration-Architect) exam on the first try.

Salesforce Integration-Architect certification is recognized by organizations across the world and is highly valued by employers. Salesforce Certified Integration Architect certification helps professionals to stand out in a crowded job market and opens up new career opportunities. With the growing demand for Salesforce integration, the Salesforce Integration-Architect certification is becoming increasingly popular among professionals. Salesforce Certified Integration Architect certification validates the candidate's expertise in Salesforce integration and helps them to stay ahead of the competition.

Salesforce Integration-Architect certification is a highly respected and sought-after certification in the IT industry. It is designed for professionals who have expertise in integrating various systems and applications with Salesforce. Salesforce Certified Integration Architect certification validates the knowledge and skills required to design and implement complex integration solutions that meet business needs.

Salesforce Integration-Architect Exam is designed to validate the skills and knowledge required to architect and implement complex integrations with Salesforce. It is a certification exam offered by Salesforce for professionals who have experience in designing and implementing complex integrations with Salesforce. Integration-Architect exam tests the ability to design, develop, and implement secure, scalable, and efficient integrations between Salesforce and other systems.

Salesforce Integration-Architect Authorized Exam Dumps & Integration-Architect Test Engine

In the industry, Integration-Architect certifications have acknowledged respect that leads the certified professionals to the best work positions as per their career objectives. We materialize your dreams by offering you the top dumps. We help you sow the seeds for success. The comprehensive study content of our PassExamDumps's Integration-Architect Dumps PDF is enough to cater all of your exam needs just at one spot.

Salesforce Certified Integration Architect Sample Questions (Q82-Q87):

NEW QUESTION # 82

Universal Containers (UC) owns a variety of cloud-based applications, including Salesforce, alongside several on-premise applications. The on-premise applications are protected behind a corporate network with limited outside access to external systems. UC would like to expose data from the on-premise applications to Salesforce for a more unified user experience. The data should be accessible from Salesforce in real-time.

Which two actions should be recommended to fulfill this system requirement?

Choose 2 answers

- A. Develop an application in Heroku that connects to the on-premise database via an ODBC string and VPC connection.
- **B. Develop custom APIs on the company's network that are invocable by Salesforce.**
- **C. Deploy MuleSoft to the on-premise network and design externally facing APIs to expose the data.**
- D. Run a batch job with an ETL tool from an on-premise server to move data to Salesforce.

Answer: B,C

Explanation:

Explanation

The system requirement is to expose data from the on-premise applications to Salesforce for a more unified user experience in real-time. The possible actions that can fulfill this requirement are:

Answer B is valid because developing custom APIs on the company's network that are invocable by Salesforce can allow Salesforce to access the data from the on-premise applications in real-time. However, this action requires opening a firewall port or using a reverse proxy to allow Salesforce to communicate with the on-premise APIs securely. Answer C is valid because deploying MuleSoft to the on-premise network and designing externally facing APIs to expose the data can also enable Salesforce to access the data from the on-premise applications in real-time. MuleSoft is an integration platform that can connect various systems and applications using APIs and standard protocols. MuleSoft can also handle security, orchestration, transformation, and other integration aspects.

Answer A is not valid because developing an application in Heroku that connects to the on-premise database via an ODBC string and VPC connection is not a real-time solution. Heroku is a cloud platform that can host web applications and services, but it cannot expose data from an on-premise database directly to Salesforce. To use Heroku for this purpose, an ETL tool or a middleware solution would be needed to synchronize the data between the on-premise database and Heroku, which would introduce latency and complexity to the integration.

Answer D is not valid because running a batch job with an ETL tool from an on-premise server to move data to Salesforce is also not a real-time solution. ETL stands for extract, transform, and load, which is a process of moving data from one system to another in batches. ETL tools can be used for data migration or integration, but they cannot provide real-time access to data from on-premise applications to Salesforce. ETL tools also have limitations on data volume, frequency, and reliability.

1: Bulk API Limits 2: Bulk API Features 3: Integrating with Salesforce using Custom Web Services :

MuleSoft Overview : Heroku Overview : ETL Overview

NEW QUESTION # 83

Northern Trail Outfitters is planning to perform nightly batch loads into Salesforce from an external system with a custom Java application using the and the CIO is curious about monitoring recommendations for the jobs from the Technical Architect Which two recommendations will help meet the requirements?

Choose 2 answers

- **A. Visually monitor in the Salesforce UI using the "Bulk Data Load Jobs in Salesforce in the setup menu.**
- B. Set the Salesforce debug logs level to "finest" and add the user Id running the job to monitor in the "Debug Logs" in the setup menu.
- C. Write the error response from the Bulk API status to a custom error logging object in Salesforce using an Apex trigger and create reports on the object.

- D. Use the `getBatchInfo` method in the Java application to monitor the status of the jobs from the Java application.

Answer: A,D

NEW QUESTION # 84

A company needs to be able to send data from Salesforce to a homegrown system behind a corporate firewall. The data needs to be pushed only one way and doesn't need to be sent in real time. The average volume is 2million records per day.

What should an integration architect consider when choosing the right option in building the integration between the external system and Salesforce?

- A. Due to high volume of records, number of concurrent requests can hit the limit for the REST API call to external system.
- B. Due to high volume of records, the external system will need to use a BULK API Rest endpoint to connect to salesforce.
- C. Due to high volume of records, salesforce will need to make a REST API call to external system.
- D. Due to high volume of records, a third-party integration tool is required to stage records off platform.

Answer: D

Explanation:

Using a third party integration tool to stage records off platform is a solution that can handle the high volume of data and avoid hitting the API limits for the REST API call to the external system. A third party integration tool can also provide features such as data transformation, error handling, and logging. Due to high volume of records, number of concurrent requests can hit the limit for the REST API call to external system is not a solution, but a problem that needs to be addressed. Due to high volume of records, the external system will need to use a BULK API Rest endpoint to connect to Salesforce is not a solution, as the requirement is to send data from Salesforce to the external system, not vice versa. Due to high volume of records, Salesforce will need to make a REST API call to external system is not a solution, as it does not address how to handle the high volume of data and avoid hitting the API limits. NEW QUESTION # 85

Universal containers are planning to implement Salesforce as their CRM system. Currently they have the following systems

1. Leads are managed in a Marketing System.
2. Sales people use Microsoft Outlook to enter contacts, emails and manage activities.
3. Inventory, Billing and Payments are managed in their ERP system.
4. The proposed CRM system is expected to provide Sales and Support people the ability to have a single view of their customers and manage their contacts, emails and activities in Salesforce CRM.

What should an Integration Consultant consider to support the proposed CRM system strategy?

- A. Plan for migration of customer and sales data across systems on a regular basis to keep them in sync.
- B. Explore Out of box Salesforce connectors for integration with ERP, Marketing and Microsoft Outlook systems.
- C. Propose a middleware system that can support interface between systems with Salesforce.
- D. Evaluate current and future data and system usage and then identify potential integration requirements to Salesforce.

Answer: D

Explanation:

The integration consultant should evaluate current and future data and system usage and then identify potential integration requirements to Salesforce. This approach can help to understand the business needs, data flows, data quality, data volume, data frequency, and data security of the proposed CRM system. Based on this analysis, the integration consultant can design and implement the best integration solution for each system, such as Marketing, ERP, or Outlook.

NEW QUESTION # 86

What is the first thing an Integration Architect should validate if a callout from a Lightning Web Component to an external endpoint is failing?

- A. The endpoint URL has been added to Content Security Policies.
- B. The endpoint domain has been added to Cross-Origin Resource Sharing.
- C. The endpoint URL has added been to an outbound firewall rule.

- D. The endpoint URL has been added to Remote Site Settings.

Answer: A

NEW QUESTION # 87

.....

Our Integration-Architect practice materials are suitable to exam candidates of different levels. And after using our Integration-Architect learning prep, they all have marked change in personal capacity to deal with the Integration-Architect exam intellectually. The world is full of chicanery, but we are honest and professional in this area over ten years. Even if you are newbie, it does not matter as well. To pass the exam in limited time, you will find it as a piece of cake with the help of our Integration-Architect study engine!
