

Salesforce Data-Architect Exam Objectives & Data-Architect Valid Test Tips

2025 Latest PrepPDF Data-Architect PDF Dumps and Data-Architect Exam Engine Free Share: https://drive.google.com/open?id=1WWM8HiYBbnllk7ZuMynBGs8nCbarXT_w

The PrepPDF is also committed to ace the Salesforce Data-Architect exam preparation journey and enable you to get success in the final Salesforce Certified Data Architect Data-Architect exam. To achieve this objective the PrepPDF is offering real, updated, and error-free Salesforce Certified Data Architect Data-Architect Dumps in three easy-to-use and compatible formats. These formats are Data-Architect PDF dumps files, desktop PrepPDF Data-Architect practice exam software, and web-based Data-Architect practice test software.

Salesforce Data-Architect Certification is the highest level of certification available for individuals who specialize in Salesforce data management. Salesforce Certified Data Architect certification requires a deep understanding of data architecture principles, data modeling, and data integration. Candidates who pass this certification exam are considered experts in designing and managing data architectures on the Salesforce platform. Salesforce Certified Data Architect certification is ideal for individuals who want to take their Salesforce career to the next level and become experts in data management.

Data-Architect Valid Test Tips | Data-Architect Practical Information

Have you learned PrepPDF Salesforce Data-Architect exam dumps? Why do the people that have used PrepPDF dumps sing its praises? Do you really want to try it whether it have that so effective? Hurry to click PrepPDF.com to download our certification training materials. Every question provides you with demo and if you think our exam dumps are good, you can immediately purchase it. After you purchase Data-Architect Exam Dumps, you will get a year free updates. Within a year, only if you would like to update the materials you have, you will get the newer version. With the dumps, you can pass Salesforce Data-Architect test with ease and get the certificate.

Salesforce Certified Data Architect Sample Questions (Q125-Q130):

NEW QUESTION # 125

Ursa Major Solar has defined a new Data Quality Plan for their Salesforce data.

Which two approaches should an Architect recommend to enforce the plan throughout the organization?
(Choose two.)

- A. Ensure all data is stored in an external system and set up an integration to Salesforce for view-only access.
- B. Schedule a weekly dashboard displaying records that are missing information to be sent to managers for review.
- C. Enforce critical business processes by using Workflow, Validation Rules, and Apex code.
- D. Schedule reports that will automatically catch duplicates and merge or delete the records every week.

Answer: B,C

Explanation:

Enforcing critical business processes by using Workflow, Validation Rules, and Apex code can help ensure data quality and consistency by applying rules and logic to the data entry and update³. Scheduling a weekly dashboard displaying records that are missing information to be sent to managers for review can help identify and fix data quality issues by providing visibility and accountability⁴.

NEW QUESTION # 126

Universal Containers (UC) has a Salesforce org with multiple automated processes defined for group membership processing. UC also has multiple admins on staff that perform manual adjustments to the role hierarchy. The automated tasks and manual tasks overlap daily, and UC is experiencing "lock errors" consistently.

What should a data architect recommend to mitigate these errors?

- **A. Enable granular locking.**
- B. Enable sharing recalculations.
- C. Remove SOQL statements from Apex Loops.
- D. Ask Salesforce support for additional CPU power.

Answer: A

Explanation:

Enabling granular locking (option A) is the best recommendation to mitigate these errors, as it allows finer control over how records are locked during automated or manual processes, and reduces the chances of lock contention or deadlock. Removing SOQL statements from Apex Loops (option B) is a good practice for improving performance and avoiding governor limits, but it does not directly address the lock errors issue. Enabling sharing recalculations (option C) is also not relevant for this issue, as it is used to update sharing rules and recalculate access for records. Asking Salesforce support for additional CPU power (option D) is also not a viable solution, as it does not solve the root cause of the lock errors.

NEW QUESTION # 127

Universal Containers has 30 million case records. The Case object has 80 fields. Agents are reporting reports in the Salesforce org. Which solution should a data architect recommend to improve reporting performance?

- A. Build reports using custom Lightning components.
- **B. Contact Salesforce support to enable skinny table for cases.**
- C. Move data off of the platform and run reporting outside Salesforce, and give access to reports.
- D. Create a custom object to store aggregate data and run reports.

Answer: B

Explanation:

According to the Salesforce documentation¹, reporting performance can be affected by various factors, such as the volume and complexity of data, the design and configuration of reports and dashboards, the number and type of users accessing the reports, etc. To improve reporting performance, some of the recommended solutions are:

Move data off of the platform and run reporting outside Salesforce, and give access to reports (option C). This means using an external service or tool that can extract, transform, and load (ETL) data from Salesforce to another system or database, such as a data warehouse or a business intelligence platform.

This can improve reporting performance by reducing the load and latency on Salesforce, and enabling faster and more flexible reporting and analysis on the external system. Users can access the reports from the external system using a link or an embedded component in Salesforce.

Contact Salesforce support to enable skinny table for cases (option B). This means requesting Salesforce to create a custom table that contains a subset of fields from the Case object that are frequently used or queried. A skinny table can improve reporting performance by avoiding joins between standard and custom fields, omitting soft-deleted records, and leveraging indexes on the fields².

Create a custom object to store aggregate data and run reports (option A). This means creating a custom object that contains summary or calculated data from the Case object, such as counts, sums, averages, etc. A custom object can improve reporting performance by reducing the number of records and fields that need to be queried and displayed.

Build reports using custom Lightning components (option D). This means creating custom components that use Lightning Web Components or Aura Components frameworks to display report data in Salesforce. A custom component can improve reporting performance by using client-side caching, pagination, lazy loading, or other techniques to optimize data rendering and interaction.

NEW QUESTION # 128

UC is migrating data from legacy system to SF. UC would like to preserve the following information on records being migrated: Date time stamps for created date and last modified date.

Ownership of records belonging to inactive users being migrated to Salesforce.

Which 2 solutions should a data architect recommends to preserve the date timestamps and ownership on records? Choose 2 answers.

- A. Log a case with SF to update these fields
- B. Enable update records with Inactive Owners Permission
- C. Enable modify all and view all permission.
- D. Enable Set Audit fields upon Record Creation Permission

Answer: B,D

NEW QUESTION # 129

Northern Trail Outfitters (NTO) has recently implemented Salesforce to track opportunities across all their regions. NTO sales teams across all regions have historically managed their sales process in Microsoft Excel.

NTO sales teams are complaining that their data from the Excel files were not migrated as part of the implementation and NTO is now facing low Salesforce adoption.

What should a data architect recommend to increase Salesforce adoption?

- A. Use the Excel connector to Salesforce to sync data from individual Excel files.
- B. Create a chatter group and upload all Excel files to the group.
- C. Load data in external database and provide access to database to sales users.
- D. Define a standard mapping and train sales users to import opportunity data.

Answer: D

Explanation:

According to Trailhead2, one of the best practices to increase Salesforce adoption is to migrate existing data from legacy systems or spreadsheets into Salesforce, so that users can access all their data in one place and leverage the features and functionality of Salesforce. Option B is the correct answer because it suggests defining a standard mapping and training sales users to import opportunity data from Excel files into Salesforce, which can help them transition from their old process and increase their confidence and satisfaction with Salesforce. Option A is incorrect because using the Excel connector to Salesforce does not migrate the data into Salesforce, but only syncs it between Excel and Salesforce, which can cause data inconsistency and duplication issues. Option C is incorrect because loading data in an external database and providing access to it does not increase Salesforce adoption, but rather creates another system for users to manage and switch between. Option D is incorrect because creating a chatter group and uploading all Excel files to it does not migrate the data into Salesforce, but only stores it as attachments, which cannot be used for reporting or analysis purposes.

NEW QUESTION # 130

.....

PrepPDF Salesforce Certified Data Architect Certification Exam come in three different formats so that the users can choose their desired design and prepare Salesforce Certified Data Architect (Data-Architect) exam according to their needs. The first we will discuss here is the PDF file of real Salesforce Certified Data Architect (Data-Architect) exam questions. It can be taken to any place via laptops, tablets, and smartphones. In addition, you can print these Salesforce Certified Data Architect (Data-Architect) PDF questions for paper study in this format of PrepPDF product frees you from restrictions of time and place as you can study Data-Architect exam questions from your comfort zone in your spare time.
