2025 Updated Heroku-Architect Exam Price | Heroku-Architect 100% Free Reasonable Exam Price

There are three different kinds of our Heroku-Architect exam questions: the PDF, Software and APP online. And i love the Software for the best for no matter how many software you have installed on your computers, our Heroku-Architect learning materials will never be influenced. Also, our Heroku-Architect Study Guide just need to be opened with internet service for the first time. Later, you can freely take it everywhere as long as you use it in the Windows system.

Salesforce Certified Heroku Architect Sample Questions (Q82-Q87):

NEW QUESTION # 82

At Universal Containers (UC), a developer named Yuichiro wrote a PHP application that, in production, uses a MySQL database. Yuichiro is onboarding Mary, a new UC developer, who is setting up her development environment. Yuichiro asks Mary to:

- 1) install the related PHP libraries manually so the application will run;
- 2) use MongoDB, instead of MySQL, in the development environment.

According to the Twelve-Factor methodology, which changes should an Architect recommend?

- A. Persist code dependencies in the application's production database. Use the same type of database locally to ensure that the dependencies are accessible.
- B. Explicitly declare code dependencies in the application's source and use the same type of database in both development and production.
- C. Recursively determine code dependencies on application startup and maintain separate Git branches for the MongoDB- and MySQL- compatible versions of the application.

- D. Explicitly declare code dependencies in the application's environment variables and use the same type of database in both development and production.

Answer: A

NEW QUESTION # 83

Universal Containers runs an application in a Private Space in the Frankfurt region. The majority of the application's users (based in Asia) are reporting issues related to high latency. What should an Architect recommend to remediate this issue cost-effectively?

- A. Deploy the application to the Common Runtime and select Tokyo as the region. Delete the existing Private Space.
- B. Create a new Private Space in the Tokyo Region, and deploy the application to the region. Delete the existing Private Space.
- C. Add the Tokyo region to the existing Private Space. Update the application's configuration to move it to Tokyo region.
- D. Create an additional Private Space in the Tokyo region. Deploy an additional instance of the application to the region.

Answer: B

NEW QUESTION # 84

In the hierarchy of cloud services, PaaS generally provides more out of the box than:

- A. Infrastructure as a service (IaaS) and on-premises Infrastructure
- B. Salesforce pages
- C. Salesforce Marketing Cloud
- D. Software as a service (SaaS)

Answer: A

NEW QUESTION # 85

Universal Containers (UC) uses Apache Kafka on Heroku to stream shipment inventory data in real time throughout the world. A Kafka topic is used to send messages with updates on the shipping container GPS coordinates as they are in transit. UC is using a Heroku Kafka basic-0 plan. The topic was provisioned with 8 partitions, 1 week of retention, and no compaction. The keys for the events are being assigned by Heroku Kafka, which means that they will be randomly distributed between the partitions. UC has a single-dyno consumer application that persists the data to their Enterprise Data Warehouse (EDW). Recently, they've been noticing data loss in the EDW.

What should an Architect with Kafka experience recommend?

- A. Use Heroku Redis to store message receipt information to account for "at-least" once delivery, which will guarantee that messages are never processed more than once. Scale up the consumer dynos to match the number of partitions so that there is one process for each partition.
- B. Enable compaction on the topic to drop older messages, which will drop older messages with the same key.
- C. Upgrade to a larger Apache Kafka for Heroku plan, which has greater data capacity.

Answer: A

NEW QUESTION # 86

Universal Containers (UC) has an app that allows a customer to schedule a compute-intensive job. It allows the customer to schedule the job on an ad-hoc basis. UC has decided to break up the app into the following services: - Website: an interface for their customers; - Billing: generates monthly invoices based on usage metrics; - Traffic Cop: manages the job queue, job definitions and job schedule; - Job Runner; runs jobs that Traffic Cop queues up. It is responsible for self-inspection and self-scaling. UC also wants to create a data lake for analytics. What foundational technology and design should an Architect use to manage communication between these services?

- A. HerokuRedis, create a large Redis store. Allow each service to place messages with an agreed-upon format into a single queue, backed by the Redis store. Services listen for messages addressed to them and take action on them. Redis will serve as the data lake.
- B. Apache Kafka on Heroku Create a Kafka queue for each service. Create a central routing service that connects to all of the Kafka queues and routes data. The central router is attached to a data lake, and pushes every message into it.
- C. Apache Kafka on Heroku as a bus between all services Create topics for billing, jobs, and website clicks Create an additional service, which will subscribe for all topics, and dump every message into a data lake
- D. Heroku Connect and Salesforce Sync all relevant data into Salesforce and allow it to flow into each service Create custom objects for each service and allow them to post to each others' objects as needed. Push data from Salesforce into Heroku Postgres for a data lake.

Answer: C
