## Salesforce Certified MuleSoft Associate Sample Questions (Q16-Q21):

### NEW QUESTION # 16

A system administrator needs to determine when permissions were last changed for an Anypoint Platform user. Which Anypoint Platform component should the administrator use to obtain this information?

- A. Audit Logging
- B. Mule Stack Traces
- C. Anypoint Monitoring
- D. Anypoint Studio

**Answer: A**

Explanation:

Anypoint Platform provides various tools and components for managing and monitoring the platform and its activities. To determine when permissions were last changed for an Anypoint Platform user, Audit Logging is the appropriate component to use. Here's a detailed explanation:

Audit Logging:

Purpose: Audit logs capture detailed records of user activities and changes within the Anypoint Platform, including permission changes.

Access: Administrators can access audit logs through the Anypoint Platform's management console.

Information Captured:

User Actions: Logs include information about user logins, permission changes, API deployments, and other critical actions.

Timestamp: Each log entry is timestamped, providing the exact time and date when the permissions were changed.

Use Case:

Monitoring and Security: Audit logs are crucial for monitoring platform activities, ensuring compliance, and investigating security incidents.

MuleSoft Documentation: Anypoint Platform Audit Logging

#### NEW QUESTION # 17

A MuleSoft developer must implement an API as a Mule application, run the application locally, and execute unit tests against the running application. Which Anypoint Platform component can the developer use to fulfill all of these requirements?

- A. API Designer
- B. API Manager
- C. Anypoint CLI
- D. Anypoint Studio

**Answer: D**

Explanation:

Anypoint Studio is the integrated development environment (IDE) provided by MuleSoft for designing, developing, and testing Mule applications. Here's how it fulfills the developer's requirements:

API Implementation:

Design and Development: Anypoint Studio provides a graphical interface to design and develop APIs as Mule applications using pre-built components and connectors.

Running Applications Locally:

Local Testing: Developers can run Mule applications locally within Anypoint Studio to test and debug them before deploying to production.

Unit Testing:

MUnit Integration: Anypoint Studio includes MUnit, MuleSoft's testing framework. Developers can create and execute unit tests directly within the IDE.

Test Execution: These tests can be run against the locally running Mule application to validate functionality and ensure code quality.

MuleSoft Documentation: Anypoint Studio

MUnit Testing: MUnit

#### NEW QUESTION # 18

A developer needs to discover which API specifications have been created within the organization before starting a new project. Which Anypoint Platform component can the developer use to find and try out the currently released API specifications?

- A. Object Store
- B. API Manager
- C. Runtime Manager
- D. Anypoint Exchange

**Answer: D**

Explanation:

When a developer needs to discover which API specifications have been created within the organization before starting a new project, Anypoint Exchange is the component to use. Here's a detailed explanation:

Anypoint Exchange:

Purpose: Provides a centralized repository where developers can find and access API specifications, connectors, templates, and other reusable assets.

API Specifications: Developers can search for API specifications defined using RAML or OAS, review their details, and try them out using provided mock services.

Capabilities:

Search and Discovery: Easily search for and discover existing API specifications within the organization.

Try Out APIs: Provides tools to interact with and test APIs directly from the Exchange, allowing developers to understand the API's functionality and behavior.

Documentation: Access detailed documentation and examples for each API specification.

MuleSoft Documentation: Anypoint Exchange

API Specifications: Finding and Using APIs in Exchange

### NEW QUESTION # 19

During a planning session with the executive leadership, the development team director presents plans for a new API to expose the data in the company's order database. An earlier effort to build an API on top of this data failed, so the director is recommending a design-first approach.

Which characteristics of a design-first approach will help make this API successful?

- A. Publishing the fully implemented API to Exchange so all developers can reuse the API
- B. Building MUnit tests so administrators can confirm code coverage percentage during deployment
- **C. Developing a specification so consumers can test before the implementation is built**
- D. Adding global policies to the API so all developers automatically secure the implementation before coding anything

**Answer: C**

Explanation:

A design-first approach emphasizes creating the API specification before implementation, ensuring better alignment with consumer needs and reducing the risk of project failure. Here's a detailed explanation:

API Specification:

Definition: An API specification is a detailed, formal description of the API's endpoints, request/response formats, and protocols.

Consumer Testing: Allows API consumers (developers) to understand, test, and provide feedback on the API design before actual development begins.

Advantages:

Early Feedback: Consumers can test the API design using mock services or tools like API Designer and provide feedback, ensuring the API meets their requirements.

Reduced Rework: Identifies potential issues and design flaws early, reducing costly changes during the implementation phase.

Documentation: Provides comprehensive documentation that aids in the development and future maintenance of the API.

Design-First Approach: Design-First API Development

API Mocking: API Designer Mocking Service

### NEW QUESTION # 20

An organization is choosing between API-led connectivity and other integration approaches. According to MuleSoft, which business benefit is associated with an API-led connectivity approach using Anypoint Platform?

- A. Higher outcome repeatability through centralized development
- B. Improved security through adoption of monolithic architectures
- **C. Increased developer productivity through self-service of API assets**
- D. Greater project predictability through tight coupling of systems

**Answer: C**

Explanation:

API-led connectivity is an approach that emphasizes the reuse of APIs to enhance agility and productivity. Here's a detailed

explanation of the associated business benefits:

Self-Service of API Assets:

Definition: API-led connectivity enables developers to discover, access, and use APIs through a centralized platform like Anypoint Exchange, promoting self-service.

Productivity: Developers can quickly find and integrate existing APIs, reducing the time and effort required to build new functionalities from scratch.

Business Benefits:

Reusability: Encourages the reuse of APIs across projects, leading to faster development cycles and reduced duplication of efforts.

Agility: Enhances the ability to respond to changing business needs by providing a flexible and modular integration framework.

Scalability: Facilitates the scaling of integration solutions as business requirements grow.

API-led Connectivity: MuleSoft API-led Connectivity

Business Benefits: Why API-led Connectivity?
