Salesforce-MuleSoft-Associate Certification Training & Salesforce-MuleSoft-Associate Practice Test & Salesforce-MuleSoft-Associate Exam Dumps

Our Salesforce-MuleSoft-Associate real study guide materials can help you get better and better reviews. This is a very intuitive standard, but sometimes it is not enough comprehensive, therefore, we need to know the importance of getting the test Salesforce-MuleSoft-Associate certification, qualification certificate for our future job and development is an important role. Only when we have enough qualifications to prove our ability can we defeat our opponents in the harsh reality. We believe our Salesforce-MuleSoft-Associate actual question will help you pass the Salesforce-MuleSoft-Associate qualification examination and get your qualification faster and more efficiently.

Salesforce Certified MuleSoft Associate Sample Questions (Q36-Q41):

NEW QUESTION # 36
A platform architect includes both an API gateway and a service mesh in the architecture of a distributed application for communication management.
Which type of communication management does a service mesh typically perform in this architecture?

- A. Between the application and external API implementations
- B. Between application services and the firewall
- C. Between services within the application
- D. Between the application and external API clients

Answer: C

Explanation:
A service mesh is typically used to manage communication between microservices within a distributed application. Here's a detailed explanation:
Service Mesh:
Definition: A service mesh is a dedicated infrastructure layer that manages service-to-service communication within a microservices architecture.
Features: Provides features such as load balancing, service discovery, traffic management, and security (e.g., mutual TLS).
Intra-Application Communication:
Focus: It focuses on internal communication between microservices, ensuring reliability, security, and observability of inter-service communications.
Management: Handles retries, circuit breaking, and service-to-service authentication transparently.
API Gateway:
Complementary Role: While a service mesh manages internal microservice communications, an API gateway manages external client requests and provides a single entry point for external API clients.
Service Mesh Overview: What is a Service Mesh?
Service Mesh vs. API Gateway: Service Mesh and API Gateway Comparison

NEW QUESTION # 37
Which Anypoint Platform component should a MuleSoft developer use to create an API specification prior to building the API implementation?

- A. API Manager
- B. API Designer
- C. MUnit
- D. Runtime Manager

Answer: B

Explanation:
Creating an API specification before building the API implementation is a critical step in API development. MuleSoft's API Designer is the tool designed for this purpose. Here's a detailed explanation:
API Designer:
Purpose: API Designer is a web-based tool within Anypoint Platform that allows developers to design, document, and test APIs.
Features:
Specification Languages: Supports RAML and OAS (OpenAPI Specification) for defining APIs.
Interactive Editing: Provides a graphical and text-based interface to design API specifications interactively.
Mocking Service: Allows developers to create mock services to simulate API behavior before the actual implementation.
Process:
Define API: Use API Designer to create a detailed API specification, including endpoints, methods, request/response schemas, and security schemes.
Documentation: Automatically generate API documentation that can be shared with stakeholders.
Testing: Test the API design using the built-in mocking service to ensure it meets requirements.
MuleSoft Documentation: API Designer
API Design Best Practices: Designing APIs

NEW QUESTION # 38
As part of a growth strategy a supplier signs a trading agreement with a large customer The customer sends purchase orders to the supplier according to the ANSI X12 EDI standard and the supplier creates the orders in its ERP system using the information in the EDI document The agreement also requires that the supplier provide a new RESTful API to process requests from the customer for current product inventory levels from the supplier's ERP system.
Which two fundamental integration use cases does the supplier need to deliver to provide an end-to-end solution for this business scenario? (Choose two.)

- A. Synchronized data transfer
- B. Data mashups
- C. Streaming data ingestion
- D. Sharing data with external partners

- E. User interface integration

Answer: A,D

Explanation:
To deliver an end-to-end solution for the described business scenario, the supplier needs to address both EDI processing and providing real-time data through a RESTful API. Here's a detailed explanation:
Sharing Data with External Partners:
EDI Integration: The supplier needs to process ANSI X12 EDI purchase orders from the customer and convert them into a format suitable for the ERP system.
Partner Integration: Establishing secure and reliable data exchanges with the customer is crucial for seamless transactions.
Synchronized Data Transfer:
Real-Time API: Providing a RESTful API to allow the customer to query current product inventory levels from the supplier's ERP system.
Data Consistency: Ensuring that the data provided through the API is accurate and up-to-date, reflecting the current state of the ERP system.
MuleSoft Documentation: EDI Integration
REST API Design: Designing APIs
Data Synchronization: Real-Time Integration

NEW QUESTION # 39
An application load balancer routes requests to a RESTful web API secured by Anypomt Flex Gateway Which protocol is involved in the communication between the load balancer and the Gateway?

- A. SMTP
- B. HTTPS
- C. SFTP
- D. LDAP

Answer: B

Explanation:
In scenarios where an application load balancer routes requests to a RESTful web API secured by Anypoint Flex Gateway, HTTPS is the protocol used. Here's a detailed explanation:
HTTPS Protocol:
Definition: HTTPS (HyperText Transfer Protocol Secure) is an extension of HTTP that provides secure communication over a computer network.
Encryption: It uses SSL/TLS to encrypt the data exchanged between the client and server, ensuring privacy and data integrity.
Load Balancer to Gateway Communication:
Secure Communication: The load balancer routes incoming requests to the API Gateway using HTTPS, ensuring that the data is encrypted and secure.
Standard Practice: HTTPS is the standard protocol for securing API communications, protecting against eavesdropping and man-in-the-middle attacks.
HTTPS Protocol: What is HTTPS?
API Gateway Security: Anypoint Flex Gateway

NEW QUESTION # 40
An integration team follows MuleSoft s recommended approach to full lifecycle API development Which activity should this team perform during the API implementation phase?

- A. Validate the API specification
- B. Design the API specification
- C. Use the API specification to build the MuleSoft application
- D. Use the API specification to monitor the MuleSoft application

Answer: C

Explanation:
MuleSoft recommends a full lifecycle API development approach which includes several phases such as design, implementation,

testing, deployment, and management. During the API implementation phase, the primary activity is to use the API specification to build the MuleSoft application. Here's a detailed explanation:

API Design:

Create API Specification: Initially, an API specification is created using RAML or OAS (OpenAPI Specification) to define the API's structure, endpoints, request/response formats, and security requirements.

API Implementation:

Build Mule Application: Using the API specification as a blueprint, the development team implements the MuleSoft application. This involves creating flows, integrating with backend systems, and ensuring the API functions as specified.

APIKit: MuleSoft provides APIKit, a tool that automatically generates Mule flows based on the API specification, speeding up the development process.

Testing: During implementation, unit tests (using MUnit) and integration tests are created to ensure the API behaves as expected.

Validation and Monitoring:

Validate Against Specification: Throughout the implementation phase, the API is continuously validated against the original specification to ensure compliance.

Deployment and Monitoring: Post-implementation, the API is deployed, and tools like Anypoint Monitoring are used to monitor its performance and usage.

MuleSoft Documentation: Full Lifecycle API Management

APIKit: Building APIs with APIKit
