

Salesforce-MuleSoft-Developer-I New Dumps Files, Guide Salesforce-MuleSoft-Developer-I Torrent

Continuous improvement is a good thing. If you keep making progress and transcending yourself, you will harvest happiness and growth. The goal of our Salesforce-MuleSoft-Developer-I latest exam guide is prompting you to challenge your limitations. People always complain that they do nothing perfectly. The fact is that they never insist on one thing and give up quickly. Our Salesforce-MuleSoft-Developer-I Study Dumps will assist you to overcome your shortcomings and become a persistent person. Once you have made up your minds to change, come to purchase our Salesforce-MuleSoft-Developer-I training practice.

Salesforce Salesforce-MuleSoft-Developer-I Exam Syllabus Topics:

Topic	Details
Topic 1	• Debugging and Troubleshooting Mule Applications: Using breakpoints to inspect a Mule event during runtime, installing missing Maven dependencies, and reading and deciphering Mule log error messages are sub-topics of this topic.
Topic 2	• Designing APIs: Designing APIs involves describing the lifecycle of the modern API and using RAML to define various aspects of an API. It includes identifying when to use query parameters vs URI parameters, and defining API parameters.
Topic 3	• Handling Errors: Handling errors includes describing default error handling in Mule applications and defining custom global default error handlers. It involves comparing On Error Continue and On Error Propagate scopes, creating error handlers for a flow, using the Try scope, and mapping errors to custom application errors.
Topic 4	• Using Connectors: It focuses on retrieving data from REST services using HTTP Request or REST Connector. Moreover, the topic covers using a Web Service Consumer connector for SOAP web services and the Transform Message component.

Topic 5	Structuring Mule Applications: Structuring Mule applications covers parameterizing an application and defining and reusing global configurations. It includes breaking an application into multiple flows using private flows, subflows, and the Flow Reference component.
Topic 6	Deploying and Managing APIs and Integrations: It includes packaging Mule applications for deployment and deploying them to CloudHub. This topic also involves using CloudHub properties, creating and deploying API proxies, connecting an API implementation to API Manager, and applying policies to secure an API.

Precise Salesforce-MuleSoft-Developer-I New Dumps Files | Perfect Guide Salesforce-MuleSoft-Developer-I Torrent and Complete Salesforce Certified MuleSoft Developer (Mule-Dev-201) Test Dumps.zip

Salesforce-MuleSoft-Developer-I exam dumps are famous for high-quality, since we have a professional team to collect and research the first-hand information. We have reliable channel to ensure you that Salesforce-MuleSoft-Developer-I exam braindumps you receive is the latest information of the exam. We are strict with the quality and answers of Salesforce-MuleSoft-Developer-I Exam Materials, we can guarantee you that what you receive are the best and most effective. In addition, online and offline chat service stuff are available, and if you have any questions for Salesforce-MuleSoft-Developer-I exam dumps, you can consult us.

Salesforce Certified MuleSoft Developer (Mule-Dev-201) Sample Questions (Q74-Q79):

NEW QUESTION # 74

Refer to the exhibit. APIkit is used to generate flow components for the RAML specification.

How many apikitrouter XML elements are generated to handle requests to every endpoint defined in the RAML specification?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

NEW QUESTION # 75

A Scatter-Gather processes three separate HTTP requests. Each request returns a Mule event with a JSON payload. What is the final output of the Scatter-Gather?

- A. An Object containing all three JSON payload Objects
- B. An Array of the three Mule event Objects
- C. An Array of the three JSON payload Objects
- **D. An Object containing all three Mule event Objects**

Answer: D

Explanation:

Correct answer is An Object containing all three Mule event Objects

The Scatter-Gather component is a routing event processor that processes a Mule event through different parallel processing routes that contain different event processors. Each route receives a reference to the Mule event and executes a sequence of one or more event processors. Each of these routes uses a separate thread to execute the event processors, and the resulting Mule event can be either the same Mule event without modifications or a new Mule event with its own payload, attributes, and variables. The Scatter-Gather component then combines the Mule events returned by each processing route into a new Mule event that is passed to the next event processor only after every route completes successfully.

The Scatter-Gather component executes each route in parallel, not sequentially. Parallel execution of routes can greatly increase the efficiency of your Mule application and may provide more information than sequential processing.

Sample output is as below

Input **Output**

🔍 type filter text

- ▼ **Mule Message**
 - ▼ **Payload**
 - ▼ **Object : Object**
 - ▶ **0 : Object**
 - ▼ **1 : Object**
 - ▶ **payload : Array<Object>**
 - ▶ **attributes : Object**
 - ▼ **2 : Object**
 - ▼ **payload : Array<Object>**
 - airlineName : String?**
 - availableSeats : Number?**
 - departureDate : String?**
 - destination : String?**
 - flightCode : String?**
 - origination : String?**
 - planeType : String?**
 - price : Number?**
 - ▶ **attributes : Object**
 - ▼ **Attributes**
 - Void : Void**
 - ▼ **Variables**
 - ▼ **code**
 - String : String**

MuleSoft Documentation reference : <https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-concept>

NEW QUESTION # 76

Refer to the exhibit.

How should the WHERE clause be changed to set the city and state values from the configured input parameters?

Query

SQL Query Text:

```
SELECT * FROM accounts
WHERE city = attributes.queryParams.city AND
state = attributes.queryParams.state
```

Input Parameters:

```
1 {
2   city: attributes.queryParams.city,
3   state: attributes.queryParams.state
4 }
```

salesforce

- A. `WHERE city = attributes.city AND state = attributes.state`
- B. `WHERE city = :city AND state = :state`
- C. `WHERE city = #[city] AND state = #[state]`
- D. `WHERE city := ${city} AND state := ${state}`

Answer: B

NEW QUESTION # 77

Refer to the exhibits.

In the Choice router, the When expression for the domesticShipping route is set to "[payload = 'FR']". What is logged after the Choice router completes?

- A. The result of the domesticShipping flow
- B. The result of the internationalShipping flow
- C. A string with value "FR"
- D. A DataWeave syntax error

Answer: D

NEW QUESTION # 78

According to MuleSoft, what is the first step to create a Modern API?

- A. Gather a list of requirements to secure the API
- B. Create an API specification and get feedback from stakeholders
- C. Create a prototype of the API implementation
- D. Performance tune and optimize the backend systems and network

Answer: B

Explanation:

First step in creating Modern API is to create an API specification and get feedback from stakeholders so that any future issues can be identified at early stage thereby reducing overall delivery time Reference: <https://developer.mulesoft.com/tutorials-and-howtos/quick-start/designing-your-first-api>

NEW QUESTION # 79

.....

DumpsTests provides Salesforce MuleSoft-Developer-I desktop-based practice software for you to test your knowledge and abilities. The Salesforce-MuleSoft-Developer-I desktop-based practice software has an easy-to-use interface. You will become accustomed to and familiar with the free demo for Salesforce MuleSoft-Developer-I Exam Questions. Exam self-evaluation techniques in our Salesforce-MuleSoft-Developer-I desktop-based software include randomized questions and timed tests. These tools assist you in assessing your ability and identifying areas for improvement to pass the Salesforce Certified MuleSoft Developer (Mule-Dev-201) exam.
