NEW QUESTION # 41

According to the National Institute of Standards and Technology (NIST) which cloud computing deployment model describes a composition of two or more distinct clouds that support data and application portability?

- A. Private cloud
- B. Community cloud
- C. Public cloud
- D. Hybrid cloud

Answer: D

Explanation:

According to the National Institute of Standards and Technology (NIST), a hybrid cloud is a cloud computing deployment model

that consists of a combination of two or more distinct cloud infrastructures (private, community, or public) that remain unique entities but are bound together by standardized or proprietary technology that enables data and application portability. Here's a detailed explanation:

* Hybrid Cloud:

* Definition: Combines on-premises infrastructure (private cloud) with public cloud services, allowing data and applications to be shared between them.

* Portability: Ensures seamless data and application movement between the private and public clouds.

* Integration: Uses technology such as VPNs, APIs, or hybrid cloud management tools to integrate the environments.

* Benefits:

* Flexibility: Offers greater flexibility in deploying workloads where they are most appropriate.

* Scalability: Provides scalability by leveraging public cloud resources while maintaining control over critical applications in a private cloud.

* Cost Efficiency: Optimizes costs by utilizing public cloud resources for less sensitive workloads while keeping sensitive data in a private cloud.

NEW QUESTION # 42

What are two reasons why a typical MuleSoft customer favors a MuleSoft-hosted Anypoint Platform runtime plane over a customer-hosted runtime for its Mule application deployments? (Choose two.)

- A. Reduced time-to-market for the first application
- B. Increased application throughput
- C. Reduced application latency
- D. increased application isolation
- E. Reduced IT operations effort

Answer: A,E

Explanation:

Choosing a MuleSoft-hosted Anypoint Platform runtime plane offers several advantages, particularly in terms of deployment efficiency and operational management. Here's a detailed explanation of the selected reasons:

* Reduced Time-to-Market for the First Application:

* Pre-Configured Environment: MuleSoft-hosted Anypoint Platform provides a ready-to-use environment, which accelerates the deployment process.

* Ease of Use: Developers can quickly set up and deploy applications without the need for extensive infrastructure setup and configuration.

* Reduced IT Operations Effort:

* Managed Services: MuleSoft handles the infrastructure management, including updates, scaling, and maintenance, reducing the operational burden on the IT team.

* Focus on Development: IT teams can focus on developing and optimizing applications rather than managing runtime environments.

NEW QUESTION # 43

During a planning session with the executive leadership, the development team director presents plans for a new API to expose the data in the company's order database. An earlier effort to build an API on top of this data failed, so the director is recommending a design-first approach.

Which characteristics of a design-first approach will help make this API successful?

- A. Publishing the fully implemented API to Exchange so all developers can reuse the API
- B. Developing a specification so consumers can test before the implementation is built
- C. Building MUnit tests so administrators can confirm code coverage percentage during deployment
- D. Adding global policies to the API so all developers automatically secure the implementation before coding anything

Answer: B

Explanation:

A design-first approach emphasizes creating the API specification before implementation, ensuring better alignment with consumer needs and reducing the risk of project failure. Here's a detailed explanation:

* API Specification:

* Definition: An API specification is a detailed, formal description of the API's endpoints, request/response formats, and protocols.

* Consumer Testing: Allows API consumers (developers) to understand, test, and provide feedback on the API design before actual development begins.

* Advantages:

* Early Feedback: Consumers can test the API design using mock services or tools like API Designer and provide feedback, ensuring the API meets their requirements.

* Reduced Rework: Identifies potential issues and design flaws early, reducing costly changes during the implementation phase.

* Documentation: Provides comprehensive documentation that aids in the development and future maintenance of the API.

NEW QUESTION # 44

A high-volume eCommerce retailer receives thousands of orders per hour and requires notification of its order management warehouse, and billing systems for subsequent processing within 15 minutes of order submission through its website. Which integration technology, when used for its typical and intended purpose, meets the retailer's requirements for this use case?

- A. Publish/Subscribe Messaging Bus (Pub/Sub)
- B. Extract Transform Load (ETL)
- C. Managed File Transfer (MFT)
- D. EnterpriseData Warehouse (EDW)

Answer: A

Explanation:

For a high-volume eCommerce retailer requiring real-time or near-real-time notifications to multiple systems, a Publish/Subscribe Messaging Bus is an ideal choice. Here's a detailed explanation:

* Publish/Subscribe Model:

* Definition: The Pub/Sub messaging model allows messages to be sent (published) by producers and received (subscribed to) by multiple consumers.

* Asynchronous Communication: It decouples the sender and receiver, enabling asynchronous communication.

* Use Case Fit:

* Real-Time Processing: Suitable for scenarios requiring real-time or near-real-time data processing and notification.

* Scalability: Handles high volumes of messages efficiently, making it suitable for environments with thousands of transactions per hour.

* Implementation:

* Message Broker: A message broker (e.g., Apache Kafka, RabbitMQ) can manage the distribution of messages to the order management, warehouse, and billing systems.

* Guaranteed Delivery: Ensures that messages are reliably delivered to all subscribed systems within the required time frame.
