MuleSoft-Integration-Associate対応内容 & MuleSoft-Integration-Associate復習時間

PassTestは、精巧にまとめられた非常に効率的な最高の有効なMuleSoft-Integration-Associate試験問題を提供するWebサイトです。MuleSoft-Integration-Associate学習ガイドで学習すると、時間と労力を節約できます。物事以外のいくつか。MuleSoft-Integration-Associateトレーニング資料の合格率とヒット率も非常に高く、数千人の候補者が当社のWebサイトを信頼し、MuleSoft-Integration-Associate試験に合格しています。候補者には非常に多くの保証を提供しており、MuleSoft-Integration-Associate学習教材を心配なく購入できます。

Salesforce Certified MuleSoft Integration Associate Exam 認定 MuleSoft-Integration-Associate 試験問題 (Q10-Q15):

質問 # 10

An organization is not meeting its growth and innovation objectives because IT cannot deliver projects fast enough to keep up with the pace of change required by the business.

According to MuleSoft's IT delivery and operating model which step should the organization take to solve this problem?

- A. Switch from a design-first to a code-first approach for IT development
- B. Modify IT governance and security controls so that line of business developers can have direct access to the organization's systems of record
- C. Hire more IT developers, architects, and project managers to increase IT delivery
- D. Adopt a new approach that decouples core IT projects from the innovation that happens within each line of business

正解: D

解説:

MuleSoft's IT delivery and operating model suggests modernizing IT practices to better support business growth and innovation. Here's a detailed explanation:

* Decoupling Core IT Projects:

* Definition: Decoupling involves separating the core IT systems and projects from the innovative and experimental projects conducted by various lines of business.

* Benefits:

* Agility: Enables lines of business to innovate rapidly without being held back by the constraints of core IT systems.

* Focus: Allows core IT to focus on maintaining and enhancing critical systems while business units can experiment and deploy new solutions more quickly.

* Implementation:

* API-led Connectivity: By using an API-led connectivity approach, core IT can expose reusable APIs and services that business units can leverage for their innovation efforts.

* Governance and Security: Ensuring that proper governance and security measures are in place to protect core systems while allowing flexibility for innovation.

* Outcome:

* Faster Delivery: Speeds up the delivery of new features and solutions, aligning with business needs and market demands.

* Enhanced Collaboration: Facilitates better collaboration between IT and business units, driving overall organizational growth.

質問 # 11

A platform architect includes both an API gateway and a service mesh in the architecture of a distributed application for communication management.

Which type of communication management does a service mesh typically perform in this architecture?

- A. Between the application and external API clients
- **B. Between services within the application**
- C. Between application services and the firewall
- D. Between the application and external API implementations

正解: B

解説:

A service mesh is typically used to manage communication between microservices within a distributed application. Here's a detailed explanation:

* Service Mesh:

* Definition: A service mesh is a dedicated infrastructure layer that manages service-to-service communication within a microservices architecture.

* Features: Provides features such as load balancing, service discovery, traffic management, and security (e.g., mutual TLS).

* Intra-Application Communication:

* Focus: It focuses on internal communication between microservices, ensuring reliability, security, and observability of inter-service communications.

* Management: Handles retries, circuit breaking, and service-to-service authentication transparently.

* API Gateway:

* Complementary Role: While a service mesh manages internal microservice communications, an API gateway manages external client requests and provides a single entry point for external API clients.

質問 # 12

Which key DevOps practice and associated Anypoint Platform component should a MuleSoft integration team adopt to improve delivery quality?

- A. Manual testing with Anypoint Studio
- B. Continuous design with API Designer
- C. Passive monitoring with Anypoint Monitoring
- **D. Automated testing with MUnit**

正解: D

解説:

To improve delivery quality, a key DevOps practice is automated testing. Within the Anypoint Platform, MUnit is the tool specifically designed for this purpose. Here's a step-by-step explanation:

* Automated Testing:

* Definition: Automated testing involves using software tools to execute tests on the application automatically, ensuring that the code works as expected.

* Benefits: It increases efficiency, consistency, and coverage of tests, reducing the risk of human error.

* MUnit:

* Integration Testing: MUnit is MuleSoft's integrated testing framework for applications built with Anypoint Studio. It allows developers to create and run tests for Mule applications, ensuring they function correctly.

* Features:

* Test Cases: Create comprehensive test cases to validate various parts of the Mule application.

* Mocking: Mock external systems and dependencies, enabling isolated testing of application components.

* Assertions: Validate the behavior of Mule flows with assertions.

* Implementation Steps:

* Design Tests: Within Anypoint Studio, design MUnit tests to cover different scenarios and edge cases of the Mule flows.

* Run Tests: Execute these tests automatically during the CI/CD pipeline to ensure that new code changes do not break existing functionality.

* Continuous Integration: Integrate MUnit tests with CI tools like Jenkins, Bamboo, or GitLab CI for continuous testing.

* MuleSoft Documentation: MUnit

* DevOps Practices: MuleSoft DevOps

質問 # 13

An API client makes an HTTP request to an API gateway with an Accept header containing the value "application/json"

What is a valid HTTP response payload for this request in the client's requested data format?

- A. <status>healthy<'status>
- B. status('healthy')
- **C. {"status": "healthy"}**
- D. status: healthy

正解: C

解説:

When an API client makes an HTTP request with an Accept header containing the value "application/json", the API server should respond with a payload formatted as JSON. Here's a detailed explanation:

* Accept Header:

* Purpose: The Accept header indicates the media type(s) that the client is willing to receive from the server.

* Value "application/json": Specifies that the client expects a response in JSON format.

* Valid JSON Response:

* Format: JSON (JavaScript Object Notation) is a lightweight data interchange format that uses key-value pairs.

* Example: A valid JSON response for the requested format would be {"status": "healthy"}.

* Key: "status"

* Value: "healthy"

* JSON Standard: JSON.org

* HTTP Headers:MDN HTTP Headers

質問 # 14

CloudHub is an example of which cloud computing service model?

- A. Monitoring as a Service (MaaS)
- **B. Platform as a Service (PaaS)**
- C. Software as a Service (SaaS)
- D. Infrastructure as a Service (IaaS)

正解: B

解説:

CloudHub is MuleSoft's integration platform as a service (iPaaS) offering. It provides a platform for deploying and managing integration applications in the cloud. Here's a detailed explanation:

* Platform as a Service (PaaS):

* Definition: PaaS provides a cloud-based environment with everything required to support the complete lifecycle of building and deploying web applications and services without the complexity of managing the underlying hardware and software layers.

* CloudHub Features:

* Deployment: Simplifies the deployment of Mule applications to the cloud.

* Management: Provides tools for managing application performance, scaling, and monitoring.

* Connectivity: Offers out-of-the-box connectors and integration capabilities for various systems and services.

* Benefits:

* Scalability: Automatically scales applications based on demand.

* Availability: Ensures high availability and reliability with built-in disaster recovery and failover capabilities.

* Security: Provides robust security features to protect data and applications.
